## CONTRACT BRIDGE

By B. JAY BECKER

**QUIZ**

You are South, both sides vulnerable. The bidding has been:

West North East South

1♣ Pass 1♦

What would you now bid with each of the following five hands?

- ♠KJ4 ♥AQJ5 ♦A963 ♣8
- ♠K75 ♥AQ ♣Q92 ♠KJ843
- ♠J8642 ♥Q ♣AK4 ♠K853
- ♠AQ5 ♥AJ8 ♠KJ6 ♣QJ92
- ♠KQ853 ♥Q87642 ♠A2 ♣

1. Double. The only possible bid to consider are: pass, one heart, one spade, and double. With 18 high card points and good distribution, a pass must be ruled out as a possibility. It doesn't pay to sit around and wait with such hands.

Rather than overcall with a heart or a spade, either of which might turn out to be the wrong choice, it is better to double and ask partner to choose the suit. Partner will know that we have at least an opening bid and support for the major suits.

2. Pass. Again there are 15 points, but this time the pass is preferred because the hand does not lend itself to a forced response from partner. A great deal of wind was taken from our sails by the club bid. The K-J of clubs may turn out to be worthless if West has the A-Q. With storm warnings in the air, it is better not to plunge ahead blindly

**DAILY CRYPTOQUOTE — Here's how to work it:**

AXYDLBAAXR  
is LONGFELLOW

One letter simply stands for another. In this sample A is used for the three L's, X for the two O's, etc. Single letters, apostrophes, the length and formation of the words are all hints; each day the code letters are different.

**PASTURE MUST BE MADE USE OF**

OTTAWA — Successful livestock and dairy farming in the Maritimes are largely dependent on the adequate production and utilization of forage crops.

A comparatively small acreage on Prince Edward Island farms is devoted to permanent pasture, as meadows are usually grazed one or more years during the course of farm rotation. Climatic conditions in the Maritimes favor a lush growth of pasture herbage in late spring and early summer and there is a rapid falling off during the early part of July.

Growth in permanent pastures must therefore be sustained until aftermath in regular rotational meadows is available for pasturage.

Light fall dressings of manure (8 to 10 tons per acre) applied once every three years help whiten clover to become established and extend the grazing period for livestock.

Over a nine-year period, 10 tons of manure increased the production of pasture herbage by 1.31 tons in June; 54 tons in July; 46 tons in August; 93 tons in September and 54 tons of green herbage per acre in October.

When the manure treatment was supplemented with annual fall applications of fertilizer (500 lb. per acre 6-12-12), manure gave rise to yield increases amounting to 1.48 tons in June; 56 tons in July; 58 tons in August; 99 tons in September and 60 tons of herbage per acre in October, over those plots receiving fertilizer only. On the basis of total production, it was found that for each ton of manure applied, the annual return was 95 tons per acre of a highly nutritive feed.
