## MONTREAL

MONTREAL (CP) — The Montreal and Canadian stock exchanges lost all of an early afternoon advance in a wave of selling shortly before closing and end Tuesday mixed. Trading was brisk.

There were few features and price changes were mostly fractional.

Base metals, quiet in the morning, picked up in the afternoon and were mixed. Hudson Bay gained 1½ at 63½ and Nickel was up ½ at 93¾.

The utilities were active and fractionally irregular. The refining oils, pipelines, steels, foods and constructions were also mixed.

Papers, beverages and western oils declined.

Among active issues Cockshutt was up 1¼ at 1⅞.

In the penny mines prices were irregularly higher and most changes were confined to a few cents.

The closing averages show banks off .7 at 60.92, utilities up .7 at 157.6, a new high, industrials up .2 at 318.7, combined up .4 at 265, papers off 4.9 at 476 and golds up .32 at 89.44.

## NEW YORK

NEW YORK (AP) — Space-age stocks, aircrafts and low-priced issues were in great demand Tuesday as the stock market rebounded from Monday's sharp decline.

In a broad recovery, blue chip issues as well as the more speculative stocks went forward in heavy trading.

Steels, motors, coppers, aircrafts, chemicals, airlines and rails were among the advancing groups. Oils were ahead a bit on average but showed some losses.

The Associated Press 60-stock averag. rose $1.60 to $224.90 with industrials up $2.90, rails up $1.50 and utilities up 20 cents.

The Dow Jones industrial average rose 4.81 to 612.69.

Canadian Pacific and Granby Mining were up ⅜, International Nickel ⅛, Aluminium Ltd. ¼, McIntyre Porcupine ⅛ and Hudson Bay Mining 2¼. Distillers Seagrams lost ⅜, Dome Mines ⅛ and Walker Gooderham ¼.

Among active Canadians on the American Exchange, Preston East Dome rose ⅛, Scurry Rainbow Oil ¾ and Fargo Oil 1-16.

## TORONTO

TORONTO (CP) — The stock market scored a narrow advance Tuesday amid the lightest trading in almost two weeks.

Speculativ mines were active at the closest but three of the five most active lost.

Radiore was the standout. In the final 30 minutes it bounced ahead 73 cents at $1.50 on a turnover of 145,800 shares. It is rumored the company made a find on one of its properties.

Base metal recovered from their morning losses and moved ahead as Hudson Bay added 1⅝ at 63¾ and International Nickel gained 1¼ at 94¼.

Changes were few and small in golds. Canadian gold kilo bars closed at $34.05 to 134.17 an ounce.

Western oils were ahead as seniors gained small fractions. Calgary and Edmonton was the exception off 1¼ at 29.

Index gains: Golds .22 to 90.70; base metals .28 to 190.94; western oils .37 to 131.93.

### CALF RAISING

During the next few months, a large percentage of the calf crop will be born, and it is with this in mind that we felt that probably an article on feeding or management would be in order.

It is generally accepted that the size and vigor of the calf is not influenced as much as might be expected by the previous feeding and condition of the dam. The reproductive function is so strong that in case of insufficient feed the fetus draws on the mother's body, and it is the mother that suffers mostly from the deficiency in nourishment. On the other hand, when a cow is excessively fat, the calf is more often somewhat undersized.

**Raising calves by hand.** The dairy calf is almost always reared by hand, although a very small portion of the milk that goes to make the total production of the country is from cows whose calves are allowed to take a portion of the milk from their mothers. As a rule, the milk of the dairy cow is worth so much more than the calf that it receives first consideration.

The question of calf raising is naturally divided into two different considerations. One deals with the raising of calves where milk is separated at the farm and cream is sold to the creamery, or where skim milk is returned from the creamery in unlimited amounts for calf feeding.

The second consideration is concerned with methods of raising calves where whole milk is sold to the condensery, the cheese factory or for market milk use. In this case no skim milk is available and even the amount of whole milk is very limited and much and much too high-priced to be used in unlimited amounts for calf feeding. The calf must be fed whole milk only for as short a time as possible, as such milk makes an expensive ration, or else the calf to be raised must be given some suitable substitute for milk.

**Attention at calving time.** The birth of a calf is a critical period for the calf as well as for the mother, and for this reason the dairyman who expects to be successful in raising good calves must be alert in his attention to the dam of the unborn calf and must stand ready to give his full attention to the calf after birth.

The cow should be placed in a clean, well-bedded maternity pen well in advance of the expected calving time. Usually a cow will not need assistance in calving, but the dairyman should be near at hand to render assistance if needed, or, if the calving is abnormal, to see the services of a veterinarian are secured in time.

When the calf is born, the first act of the dairyman should be to see that the calf starts breathing. Sometimes mucous or phlegm must be removed from the mouth or nostrils before breathing can start.

As soon as the calf breathes, the navel cord should be stripped out of any clotted blood and disinfected as a precaution against disease. Painting with iodine is a common practice.

Before the calf stands to such, the cow's udder and teats should be washed with chlorine solution. This is a guard against infection.

**Taking the calf from its mother.** There is great difference in opinion and practice regarding beginning of hand feeding. Some take the calf away from its mother at once, without allowing it to nurse at all. Others prefer to let it nurse once; and some allow it to remain with the cow three or four days, or until the fever is out of the udder and the milk is fit for use in the dairy.

It probably makes very little difference as to this point; but it is a fact easily established that the earlier the calf is taken from the cow, the easier it will be to teach it to drink. The calf that has never nursed is easily taught to take the milk from a pail, while a calf a week or a month old is often a difficult subject to teach.

A safe practice and one generally followed is to take the calf away from its dam on the third day. When the udder is caked, it is best to leave the calf with her until this condition is removed.

**Importance of colostrum.** One point that must be kept in mind is that at first the milk from the mother should always be given the calf, and not milk from some other cow. The first milk or chlostrum, given by a cow is especially suited to the requirements of a young calf. The usual explanation has been that the colostrum acts as a physic and stimulates the digestive organs. Recently it has been found by one invest
