Lace Curtains,  
Wall Paper, Carpets,  
Floor Oil Cloth.

THE SEMI-ANNUAL HOUSE CLEANING PERFORMANCE begins upon the  
approach of Spring, and nearly every housekeeper will find it necessary  
to renew

Lace Curtains, Wall Paper,  
Carpets and Floor Oilcloths.

It is hardly necessary for us to do more than mention that we are now ready  
with our usual wonderful display of LACE CURTAINS, in White, Cream and  
C. de Colored. We have also a nice lot of CHENILLE and SILK CURTAINS.  
From past experience we know our prices are very much in favor of the purchaser.

Our stock of WALL PAPER, CARPETS and FLOOR OILCLOTHS should  
command the inspection of anyone requiring those things.

NOURISHMENT V. RSUS STIMULANT.

EXTRACTS OF BEEF Stimulate Only.  
JOHNSTON'S FLUID BEEF Nourishes Thoroughly.

STIMULANTS make you feel good temporarily.  
NOURISHMENT does you good permanently

Which would you choose to give you strength?  
JOHNSTON'S FLUID BEEF OR EXTRACT OF BEEF  
March 3, 1893.

REPAIRS!

SPRING, 1893.

FOR THE NEXT SIX WEEKS we will give special and  
prompt attention to all REPAIRS in our line. The  
same facilities with which we produce New Furniture so  
cheaply, enables us to do well and satisfactorily every  
description of Furniture Repairs.  
We are still at work making and selling FINE NEW  
FURNITURE at prices hard to find elsewhere.

Sign of Big Book, J. D. McLeod's Corner.  
Ch'town, Nov. 2, 1892.

"She  
Looketh  
Well

to the ways of her household."  
Yes, Solomon is right; that's what  
the good housekeeper everywhere  
does, but particularly in Can-  
ada.

But her ways are not always  
old ways. In fact she has dis-  
carded many unsatisfactory old  
ways. For instance, to-day she  
is using

the New Shortening, instead of  
lard. And this is in itself a re-  
ason why "she looketh well" in  
another sense, for she eats no  
lard to cause poor digestion and  
a worse complexion.

COTTOLINE is much better  
than lard for all cooking pur-  
poses, as every one who has tried  
it declares. Have you tried it?  
For sale everywhere.

Made only by  
N. K. FAIRBANK & CO.,  
Wellington and Ann Sts.,  
MONTREAL.

"No Funds"  
Take care that your drafts on  
your physical endurance don't come  
back to you some day marked "no  
funds." Take

SCOTT'S

mch25-4y law (thurs) & wky

Ottawa Notes.  
At a meeting of the Select Committee on  
Agriculture, held a few days ago, Mr  
Craig, horticulturist at the Experimental  
Farm, gave an interesting ad-  
dress on the work done in his  
department. On the table of the  
committee room were a number of preserv-  
ed specimens of fruit, which were prepared  
for the Chicago Exhibition. They included  
samples of grapes, currants, gooseberries,  
plums, cherries and apples, including some  
beautiful specimens of the Wealthy, a kind  
that is noted for hardiness and long keep-  
ing qualities.

Referring to fungous diseases, Mr. Craig  
said that the bulletin issued on March 15th  
contained suggestions in regard to spraying  
for the prevention of such during the year  
1893:

GENERAL CONSIDERATIONS.  
Spraying with arsenites for the prevention  
of insect attacks has, by progressive fruit  
growers, become a recognized necessity and is  
now widely practiced. Spraying with copper  
compounds for the prevention of fungous dis-  
eases is rapidly gaining in favor and the value  
of the remedies recommended has been demon-  
strated by the orchardist, as well as the ex-  
perimentalist.

Fungous diseases will in all probability in-  
crease in proportion as the food plants upon  
which they prey are multiplied, and as climatic  
and other conditions are favorable to their  
development. Spraying, therefore, must be  
resorted to, and in order to derive the greatest  
benefit it should be generally practiced. The  
value of the efforts of one man who faithfully  
sprays his orchard is greatly lessened if his  
neighbor neglects preventive measures and so  
allows his orchard to serve the purpose of a  
breeding ground for the spores of fungous dis-  
eases such as pear and apple "scab."

HOW TO SPRAY.  
As the treatment is entirely preventive, in  
order to make spraying effective it must be  
commenced early. All parts of trees or  
plants must be reached with the preventive  
agent. Drenching is not necessary and is ex-  
haustive. A thin film or coating of the fungic-  
ide deposited upon the foliage will prevent the  
development of the spores as well as a  
complete soaking; but it is important that all  
the leafy surface should be wetted at least on  
the upper side. For orchard work a good  
force pump, which may be fitted into a  
barrel—side or end—will give satisfaction.  
It must be of sufficient strength, and fitted  
with a nozzle which will project the spray in  
a fine state of division, yet with sufficient  
force to penetrate the deeper recesses of the  
foliage. More expensive pumps drawn and  
operated by horse power may be purchased,  
but are seldom necessary except for large  
orchards. The Vermorel nozzle is a very  
satisfactory instrument for distributing the  
liquid.

CO-OPERATIVE SPRAYING.  
Some factors which are deterrents to the  
progress of spraying may be enumerated as  
follows: This work, like the introduction of  
spraying for the prevention of insect enemies,  
on account of involving new lines of thought  
and action, is sometimes regarded by the  
farmer impracticable on a large scale. It  
must be done at certain periods of the year—  
otherwise it is inefficacious. It involves the  
purchase of implements and materials which  
are sometimes difficult to obtain just when  
most needed. The success of the work depends  
also on intelligent adaptation of the treatment  
to the climatic conditions existing during the  
spraying period.

A complete spraying outfit, including chemi-  
cals, might be purchased by a person who  
would be prepared to spray under contract, by  
the acre, or at a stated figure per tree. If this  
system of combating fungus and insect en-  
emies was introduced it would obviate much of  
the prejudice and inconvenience now con-  
nected with the work, and spraying would prob-  
ably in a few years, to the great benefit of or-  
chardists, become the general practice.

SPRAYING MIXTURES.  
1. Diluted Bordeaux Mixtures.  
Copper sulphate ..... 4 lb.  
Lime ..... 4 lb.  
Paris green ..... 4 oz.  
Water ..... 50 gals.

This may be prepared by dissolving in a  
barrel four pounds of powdered Copper Sulphate.  
In another vessel slake four pounds of  
fresh lime with as many gallons of water.  
Spray a piece of coarse sack, held in place  
by a hoop, over the top of the barrel in which  
the Copper Sulphate has been dissolved. Strain  
through this the creamy mixture of lime and  
water. Paris Green may then be added, after  
which the barrel should be filled with water.  
This forms an excellent insecticide as well as  
fungicide and therefore useful to destroy C-d  
worm, bud moth and canker worm. It  
should be used soon after being prepared.

Ammoniacal Copper Carbonate.  
2. Copper carbonate ..... 5 oz  
Ammonia ..... 2 qts  
Water ..... 50 gallons.

This is more expensive than the former, is  
more easily applied and is used as a substitute,  
especially in the case of grapes, where the Bor-  
deaux mixture might, by adhering to the  
fruit, injure its sale.

It is prepared by dissolving the Copper Car-  
bonate in the ammonia and diluting with  
water to fifty gallons. The concentrated solu-  
tion should be poured into the water. Care  
should be taken to keep the ammonia tightly  
corked in glass or stone jar.

TREATMENT OF APPLE AND PEAR SPOT.  
1. Before growth begins in spring, spray  
with a solution of copper sulphate 1 lb. to 50  
gallons of water. On an account should this  
be applied after the foliage has appeared,  
as it will severely injure it.

2. Just before the blossoms open spray with  
diluted Bordeaux mixture (No. 1) Repeat  
this after the blossoms have fallen, and make  
a third application two or three weeks after  
wards. If the season is wet and rainy a later  
application may be advisable.

PLUM AND PEACH ROT—(Monilia)  
Without being fully tested, the following  
course of treatment is recommended for trial  
Spray as soon as the fruit sets with Sulphate  
of Copper 3 ozs. to 45 gallons; follow this  
with diluted Bordeaux mixture to which Paris  
green has been added, for the purpose of  
checking attacks of the curculio. If rot de-  
velops late in the season, as is sometimes the  
case just before the ripening of the fruit,  
spray again with Sulphate of Copper solution  
or Ammoniacal Copper Carbonate.

GOOSEBERRY MILDEW.  
This disease can be effectually treated by  
using either Ammoniacal Copper Carbonate

Bordeaux mixture (No. 1), but as Potassium  
sulphide (Liver of sulphur) serves the same  
purpose, is somewhat cheaper and more easily  
prepared, it is therefore recommended here.  
Treatment should commence with the first  
signs of growth and continue at intervals of  
ten or twelve days till five or six applications  
are made.

SUPPLIES.  
Chemicals for spraying can now be ob-  
tained from most druggists, and a few firms  
whose advertisements may be found in the  
Canadian Horticulturist and other journals  
are making specialties of these materials.

Pumps of all sizes are offered for sale by the  
leading seedmen, dealers and manufacturers,  
at prices ranging from \$3.50 to \$10 or \$12.  
The barrel pump may be mounted on a stone-  
boat, cart or wagon as convenience or circum-  
stances may suggest. Such a pump may be  
fitted to a barrel and made ready for use at a  
cost not exceeding twelve dollars. The copper  
knapsack pump, so called because it is  
carried on the back of the operator, has a  
capacity of four or five gallons, and furnishes  
a convenient means of spraying low growing  
plants, such as grapes, currants, gooseberries  
and potatoes. As the original Knapsack  
pump designed by the Department of Agricul-  
ture at Washington was not patented,  
there is nothing to prevent its manufacture in  
Canada.

Referring to the spraying mixtures, he  
thought the Diluted Bordeaux Mixture  
would give the best result in rainy seasons;  
but in dry seasons it was apt to prove  
prejudicial to the sale of the fruit on which  
it is used. In dry seasons he would  
recommend the Ammoniacal Copper  
Carbonate.

Referring to black knot on plum trees,  
he said that this disease is not formed by  
insects, but is caused by the spores lodging  
on the bark of the branches when wet with  
rain or dew, and gradually taking root.  
The time when this infection takes place  
has not been decided; but it seems certain  
that these spores are disseminated in  
summer. The only remedy when the trees  
are badly affected is to cut them down and  
burn them. It will not do to cut them  
down and leave them behind the orchard,  
as there will be as much danger from  
the infection in that way as if the tree  
were left. It is calculated that one tree  
contains enough spores to infect a whole  
county. There is no variety of plum trees  
that is proof against this disease, though  
some kinds may not be so subject to it as  
others. It is the same with respect to  
curculio. No variety of tree is proof  
against the attack of these diseases. When  
plum trees are only slightly affected, by  
cutting off the branches five or six inches  
below where the fungus has formed, and  
by spraying well with the Bordeaux mix-  
ture, the disease may be prevented. The  
mixture, when properly applied, forms a  
scale over the bark, and the pores cannot  
find a lodgment.

Mr. Craig had an improved kind of  
spraying pump, which is manufactured at  
Oak Point, New York, and is, he said, the  
best for the purpose he had seen. It could  
be worked with one hand, and the other  
hand could be employed in directing the  
nozzle over the bark, and the pores cannot  
find a lodgment.

Stay on the Farm.

The following views are from a Pennyl-  
vania paper and are worthy of consideration  
by all—  
"The farmer's life is mixed with toil and  
pleasure. There is always work to be done  
on a farm—a gate to mend, a fence to  
reset, an ox in the ditch, a crop to culti-  
vate, a crop to gather and a thousand other  
things to keep the active brain and willing  
hands and feet employed yet if the farmer  
wishes a little recreation, he can leave his  
tools and labor and spend a day or two in  
the woods with his gun, or a day with his  
fishing rod on the lakes and stream.  
"It is not so with the business man in  
the city. His business must go on. He  
cannot shut his door and walk out. If he  
takes a day off, he necessarily has to put  
some one in his place. Farm life is real  
and life, if well planned; but it may be  
full of misery if not managed with a  
view of making and mixing pleasure with  
business. Farmers do more hard work  
than business men, and usually live longer  
and harder. Farm life is made more  
tolerable by the joy and happiness we get  
out of it. The business man has his bills  
to meet every month, and is often puzzled  
to know how to make ends meet. He has  
hours of precious, sweet sleep over em-  
barassments that stalk in his pathway, while  
the contented farmer, without the fear of  
being closed up by the sheriff, takes his  
rest. Farmers have bills to meet, it is true,  
but they do not come like rills bills from a  
city every week or two. The writer has also  
tried business in the commercial world, where  
no allowances are made for dry weather, wet  
weather, short crops or low prices. The com-  
mercial world has no sympathy with a busi-  
ness man. The day his bills fall due he is ex-  
pected to meet them; if he is unable his paper  
is liable to go to protest and his business to  
pieces. Those who are doing well on agricul-  
tural pursuits should let well enough alone. The  
cities are over-crowded with population and  
poverty. The most independent class of peo-  
ple in the world is that class that have a good  
home on a farm, and make their own living."

Nineteen Boxes.  
BEANTOWN, March 20—The Examiner last  
week published an article on the case of Archie  
Rymal, of this city, which has caused consid-  
erable excitement in Beantown and district. It  
appears Mr. Rymal has had more than his  
share of suffering during the past few years, so  
far as he has run down from kidney disease that  
he had lost the power of his limbs and back.  
He could only get around with the aid of two  
crutches, or when assisted by kind hands. His  
death was daily expected. On the advice of  
Dr. Rymal has had more than his share of  
suffering during the past few years, so far  
as he has run down from kidney disease that  
he had lost the power of his limbs and back.

Dr. Rymal has had more than his share of  
suffering during the past few years, so far  
as he has run down from kidney disease that  
he had lost the power of his limbs and back.  
He could only get around with the aid of two  
crutches, or when assisted by kind hands. His  
death was daily expected. On the advice of  
Dr. Rymal has had more than his share of  
suffering during the past few years, so far
