Seek Recognition Of Hairless Dog

By WILLIAM SHANAHAN MEXICO CITY (Reuters)—The xoloizcuintle, commonly known as the Mexican hairless dog, has led a dog's life for 2,000 years.

Now, however, he appears to be about to enter the kennel club. The xoloizcuintle has survived countless tribulations—certainly enough to convince him that dog's best friend is not man—but his recent popularity as a pet appears to have rescued him from extinction.

Although now bred in several countries, the xoloizcuintle is uniquely a product of the Americas, probably Mexico. Linnaeus, a noted French canine historian, said that the dog was domesticated in the Caribbean region. Other historians speculate that the animal may have survived the trek of ancient man from Asia to the new world.

The animal played a triple role in ancient Aztec society. First, it is believed to have attained the status of a minor deity because so many clay representations of the dog are found in tombs. The dog often was killed upon the death of its master and laid alongside him in the belief that it would serve him as guide in the next world.

The ancient Indians also discovered a third practical use for the xoloizcuintle, which has a higher body temperature than other species of dog. As a result, he was kept as a source of food in time of siege or shortage. Fatted and properly prepared, the dog was considered a delicacy by the Aztecs.
