Meeting at Souris.
 According to announcement a public meeting of the farmers and others interested in the success of the Gowan Brae Cheese Factory, was held in St. Patrick's Hall, Souris, on the 17th inst. The meeting was addressed by Prof. Robertson and Mr. T. J. Dillon on behalf of the Department of Agriculture. Owing to the threatening condition of the weather the attendance was not as large as it might have been, but those who were present were thoroughly representative of the farmers who will be the main support of this new venture in our midst.
 Mr. Thos. Mullally, of Souris River, was called to the chair, and while Prof. Robertson was engaged preparing some preliminaries, the chairman called on Mr. Dillon to say a few words to the meeting and give instruction to the directors in the conducting of the same to the patrons in the supporting of the factory. After reviewing the work of the New Perth factory, and contrasting its origin to that of Gowan Brae, he gave great encouragement to the directors and patrons by showing that they were starting under just as favorable auspices as the New Perth factory, and by pointing out some of the disadvantages under which New Perth was laboring and which this factory may surmount. He expressed hopes that the returns of this factory would be far superior to the model factory which was apparently satisfactory to all concerned. He also showed the great loss sustained by farmers in feeding pigs with good appetizers but which were poor flesh formers.
 Mr. Dillon then resumed his seat to give place to Professor Robertson, who held the undivided attention of the audience during the whole of his long, interesting, and highly-instructive address. He began by tracing the growth of the dairy business from the start on P. E. Island some three years ago. He showed how both the people were at first to adopt the system of feeding corn for cattle, but when they saw its utility as a cheap flesh-producer, and being much improved by the scarcity of fodder for their part this spring, whereas their neighbors who sowed corn and green feed had a sufficiency, they have come to the conclusion that from this out they will go in for raising corn and other green feed, and promulgate the dairy interests instead of growing crops highly exhaustive to the soil, and which give very little remuneration. His idea was to inculcate into the minds of his hearers a spirit of enthusiasm towards the furtherance of the dairy interests in this vicinity; to show some of our farmers who had begun to despair of success on account of repeated failures in the crops in general, that an avenue of success lay open in the dairying interests, which, if taken advantage of by means of growing corn and ensilage, would lessen the cost of production and thereby ensure a greater profit.
 It is not necessary, he pointed out, to have any expensive machinery to plant this corn. Run a plough through your field, leaving furrows about three feet apart, take a tin nail, tapering towards the bottom, in which pierce holes, by means of a large nail sufficient to allow a kernel of corn to pass through, shake this over the furrow, having three or four kernels in a pile and each pile about three feet apart, then cover up and you have the corn planted as well as the most expensive machinery would do it; and when it springs up, if it is attended to—namely, the weeds cut down—it will grow to the height of 5 or 6 feet. Even if the farmer has no machine let him not do without the corn; but plough up a piece of pasture land and it will be as good as can be obtained. He showed how the dairying interests would keep our young people on the farm, by increasing the amount of money in circulation, and thereby causing a greater interest to be taken in agriculture. He also explained a simple means of saving the corn when one has not a silo, by means of a rail resting on two supports in the form of a wood horse, on both sides of which are built the stock of corn, which is kept in position by means of another pole driven right angles through a hole in the stock. The corn is then tied at the head by means of a hay or straw rope. The pillion is pulled up, the horse withdrawn, and the stock remains perfectly stable and may be left in the field during the winter, to be fed to the stock when necessary; or they may be taken into the shed and stood upon end, for, if otherwise, they would heat. He was thoroughly successful in the purpose of his address, for his hearers went away imbued with a spirit of self-confidence, and believing that dairying was the only kind of farming that will pay on P. E. Island, and determined to lay off a part of their farms for the growing of green feed for their cattle; to give up the starvation and to patronize the cheese factory, and make a complete revolution in farming matters at this end of the Island, so that they will never be caught in the same predicament for fodder and cash as they have been this spring.

The Dairying Industry.
 According to notice a meeting was held in the schoolroom, Cambridge Cross. Hon. James Clow, President of the company, presided, and opened the meeting with a short but appropriate speech, introducing Prof. J. W. Robertson and Mr. T. J. Dillon, calling on the latter gentleman to give an account of the work done at the New Perth dairying station last season. He (Mr. Dillon) then gave an outline of the work done at the New Perth station last season, which far exceeded his expectations, and hoped that the Murray Harbor North Dairying Company's efforts would be crowned with the same success. Mr. Dillon said that the Murray Harbor North Dairying Company was deserving of great praise in having such a fine factory. He wished the company every success, and concluded his speech by saying that he would do all in his power to make the business a success.
 Prof. J. W. Robertson's address was

something new to the farmers. It seemed to lift them from their dull way of getting along, and led them to understand that there is a much better way of farming than the process they have been carrying on. He gave grand ideas on dairy farming and the benefits derived therefrom. He said that the Island was adapted for dairy farming, and recommended the raising of green feed, such as corn, peas, vetches, etc. He touched on the benefits of good feeding and what it would produce. The address impressed with profound attention.
 At the close of the Professor's address, the agreements for the running of the factory were agreed to and signed.
 On motion, a vote of thanks was accorded to the Professor, and the meeting closed, hoping to have another visit from the Professor in the near future.
J. A. C. Seely.

Rustico Notes.
 The arrival of spring has enlivened business in this section of the county. Lobster fishing has been resumed with the usual vigor of former years. The two principal factories are owned by Mr. S. Pineau and Messrs. Rattray and Dobson. Rattray and Dobson's is very complete, being equipped with an agency of steam. Notwithstanding the unfavorable weather, fair catches have been made, and those engaged in this business anti-cipate success. The herring fishery has been better than that of preceding years.
 The trading schooners Eddy, Capt. Boote; Clara May, Capt. LePage; Acadia, Capt. A. Doucet; Merry May, Capt. McKay, and the Laurel, C. P. T. Doucet, have all left this harbor laden with farm produce. The sloop K. the Hills, owned by Stanislas Huet, Capt. J. Gallant, also left laden with potatoes, but in the recent storm was driven ashore near St. Peter's Bay, from where, owing to the prevalence of northerly winds, she has not yet been removed.
 As yet very little has been done towards farming, the spring being so late; but old sages in their experience remind us that good crops generally follow a late spring. The farmers were expecting that their potatoes would be again almost destroyed by the ravages of the Colorado potato beetle, but the combination, acting as a "kind mother," has provided a ponderous amount of Paris green (hush! hush!) which, if administered in moderate doses, will annihilate every parent and offspring of the devastating beetle.
 The approaching election is looked forward to with keen interest, each elector being animated with a spirit of retaliation against the despotic power that gave origin to so many ignominious acts, such as the gerrymandering of King's County, which might more suitably be called "Petersmandering," causing electoral districts, having in view the security of its despotism; and the disfranchising of the Dominion officials, who being perhaps the most intelligent of our countrymen, are the steamer running the government, the most cherished of all civilized nations, and the squandering of our public money, as in the case of the management of the public works in "extras and unaccounted for," are proceedings which have deprived them of the support of many of their followers, and will undoubtedly, if they can be such—cause a feeling of shame and confusion to overpower the Wise man, when he presents himself to the electors.
Rustico, May 9, 1893. LA NITCHE.

Mount Stewart Notes.
 The farmers in this vicinity are busy with their spring's work. Some wheat is already sown and a few potatoes planted.
 Our cheese factory under the superintendence of John R. Doyle, Esq., is being rapidly pushed to completion.
 Prof. Robertson lectured here yesterday to a goodly number of agriculturists, notwithstanding the very busy season. The Professor is evidently a practical man, and the directors of our factory no doubt gained some very valuable information. We trust that the advice given as to raising fodder corn, etc., will be acted on by our farmers, and thus ensure the success of the cheese industry.
 We are pleased to see our young friend J. A. C. Seely again in our midst. Mr. Seely spent on his marked success in Dalhousie College, where he passed in all the subjects of the second year, though it was his first term in that institution. We understand that this is the second time an Islander has done this in the history of Dalhousie. We congratulate Mr. Seely on his marked success.
 In your issue of last week we notice your correspondent "Old Time Grit" has some faults to find with the Peters Combination. He made no mention, however, of the one redeeming feature of that Government—the moral influence it exerts over some of its supporters. Everyone living in this village will remember that during the Sullivan and McLeod administrations two at least of our prominent grits were noted for attributing every thing in the shape of bad roads, delays in the steamer running, the government as in such matters. Many people were surprised at the carelessness of the then government as soon as their political chief took up the reins of power, however, these two worthies attributed these misfortunes to their proper causes, and on the whole talked more rationally about such matters. Many people were surprised at the change, and said it would not be lasting, but the crucial test came last week, and proved to mankind in general that these skeptics were mistaken.
 The little "May Queen," to the surprise of everyone here and except the two gentlemen in question, steamed up to our wharf and after getting her two passengers aboard left for Charlottetown. On her return trip, owing to the tide being too low or to the dense fog at the time prevailing, she was unable to make the wharf, and with one or two grit friends and a number of other gentlemen, was compelled to remain in the river about a mile from the village, till 6 o'clock next morning. Without fire, a morsel of food, or any other comfort, did these two men complain, swear or malign the government as in days gone by? No. With calm resignation, they betokened happiness, they quietly sat down, smoked their calumets, relieving the monotony every now and then by an exclaiming yawn.
 Since then they often relate the pleasant night they spent on the waters of the Hillsboro. Verily a great change has taken place.
OLD TIME TOKY.
 Mount Stewart, May 16, 1893.
