Ask for our Catalogues and Circulars. H. A. A. BRAULT, Director. oct26

A LAKE PUMPED OUT.

A Battle of 16 Months Waged With Water in Order to get a Rich Iron Ore Deposit.

Few pieces of engineering work ever undertaken that exceeded the pumping out of Lake Angeine, near Ishpeming, Mich., where pumps have been working for sixteen months. The water is all gone now, but apparently the hardest part of the work is still to be accomplished.

It was a long time the source of that city's water supply, until the growth of the town about its shores contaminated the water. Under the bed of the lake lies the largest iron ore deposit ever discovered. The ore was discovered a few years ago, when a diamond drill was set on the frozen surface of the lake one winter and a hole drilled 900 feet down below the bed of the big iron.

The greater part of the lake was owned by the Cleveland Iron Mining Company. The first and second named companies did more or less work under the surface of the lake, but the ever present danger of a rupture of the water above rendered it imperative that the water be taken out. Work was begun last spring before the snow left the ground, and a rotary pump of a capacity of 20,000 gallons per minute was anchored in a large in the center of the lake and began pumping water into big fire elevated twenty feet above the surface of the water.

Now, however, a serious question remains to be settled. There is a bed of mud from four feet deep over the bed of the former lake. This mud is kept moist by underground springs from which water bubbles up. Big tubular stand-pipes, pierced with a number of small holes hardly larger than a needle's point, are being forced into the mud, and into these the water filters and is pumped out. The surface of the lake is now treacherous than quicksand, for any heavy object thrown on it is quickly engulfed. Several narrow escapes from drowning have taken place. It will take sixteen months longer to get rid of the mud.—Tin and Terne.

Has Japan the Patent Center? The Japan Mail asserts that the new Japanese cruiser "Yoshino" is ahead of all others. It says: "The steam trials of the Japanese cruiser 'Yoshino,' which was constructed by the firm of Sir W. G. Armstrong, from designs by their naval architect, Mr. Philip Watts, have been held under the supervision of a commission of Japanese officials, including Captain Kawara, Mr. Yamaki, Mr. Matsue and Lieutenant Kato. The vessel is generally similar in design to the 'Cebu' of the Japanese Navy, but was built by the same firm for the Argentine Republic.

The "Yoshino" has, however, attained a greater speed and is at the present time the fastest cruiser afloat. She is 350 feet long and 46 feet broad, and has a displacement of about 4000 tons. Her armament consists of four 6-inch quick firing guns, eight 4-inch quick firing guns, twenty-two 3-pound quick firing guns and five torpedo tubes.

Lord Ravenscroft in his address at the London meeting of the Institution of Naval Architects, drew attention to this vessel and stated that the firm contemplated attaining a speed of ten knots. This was fully realized in the trials, when the speed attained as the means of comparison on the measured mile with and against the tide in accordance with the practice of the British Navy, was 23.081 knots.

The actual speeds recorded were as follows: First run, against the tide, 23.042 knots; second run, with the tide, 23.077 knots; third run, against the tide, 23.271 knots; fourth run, with the tide, 23.271 knots.

The programme also consisted of a series of progressive trials to establish a curve of speed for the ship, the information thus obtained being required for further trials which have yet to be made, including a six hours' trial with natural draught, when a speed of 21 knots is contemplated. The speeds at which the trials were made and corresponding revolutions and horse power observed were 12, 16, 20, 22.1 and 23.03 knots, the latter being accepted as the official record draught trial of the ship.

Kitchen Hints. In baking bread or rolls put a saucenpan of boiling water into the oven. The steam will keep the crust smooth and tender.

Butter put into clean pots and well surrounded with charcoal will keep good for 12 months.

To remove claret stains from a tablecloth put salt on immediately and tinkle over the spot. Rinse in cold water before washing. If not entirely removed apply lemon juice and dry in the sun.

Much of the heavy cake and bread is the result of the oven door being banged when closed. Close the door as gently as possible. Nearly every one opens it gently enough.

For frying always put a pound or two of fat in the pan. This is no waste, as the same fat can be used over and over by pouring it through a strainer into a crock kept for the purpose.—New York World.

Rapid Growth of Berlin. So rapid has been the growth of the German capital that the municipality of Berlin finds its spacious town hall inadequate to its needs, and an adjacent plot of ground has been purchased at a cost of 5,000,000 marks for the erection of new offices. On the other hand, the scheme for laying out and embellishing the surroundings of the royal palace has been rejected by the city elders, and the tone of various inspired articles in the semi-official press proves that considerable annoyance is felt in court circles.

Should the municipality persist in its present unfriendly attitude it is plainly intimated that the court will shorten its stay at Berlin, and perhaps ultimately make Potsdam its permanent residence. Although of a costly character the palace scheme which has been rejected falls very much short of the more ambitious scheme proposed by the Emperor, who has very exalted views of the requirements of imperial state.

For Over Fifty Years. As Old AND WELL TRIED REMEDY.—Mrs. Winslow's Soothing Syrup has been used for over fifty years by millions of mothers for their children while teething, with perfect success. It soothes the child, softens the gums, allays the pain, cures the colic, and is the best remedy for Diarrhoea. It is pleasant to the taste. Sold by Druggists in every part of the world. Twenty-five cents a bottle. Its value is incalculable. Be sure and ask for Mrs. Winslow's Soothing Syrup, and take no other kind.—m. w. f. wkly—1 y

SUEZ CANAL SHARES.

Success Attending the Late Lord Beaconsfield's Dealings.

"Few acts of the late Lord Beaconsfield," says The Birmingham Daily Post, "provoked keener criticism at the time than his investment in 1875, of four millions of British money in the purchase of Suez Canal shares. It was an entirely new departure in administrative methods in this country, and one obviously attended with considerable risk for British taxpayers and British credit. There was an element about it which the Government could ignore, and furthermore, it was a precedent that might prove dangerous in the future."

It is a long time the source of that city's water supply, until the growth of the town about its shores contaminated the water. Under the bed of the lake lies the largest iron ore deposit ever discovered. The ore was discovered a few years ago, when a diamond drill was set on the frozen surface of the lake one winter and a hole drilled 900 feet down below the bed of the big iron.

Nervous, Tired, Weak.

That most dreaded disease, typhoid pneumonia left me with a cough, a sore throat, tired and nervous. I could not sleep nights. To add to my many troubles, last winter I had La Grippe. It seemed I would not live until spring. I tried many remedies, but got no relief until I took Skoda's Discovery. My little boy has been sickly for several years. He has taken Skoda's Discovery, and now he is as fat, rosy cheeked little chap as you would like to see.

FATHER AND SON TOOK Skoda's Discovery.

Success Attending the Late Lord Beaconsfield's Dealings. "Few acts of the late Lord Beaconsfield," says The Birmingham Daily Post, "provoked keener criticism at the time than his investment in 1875, of four millions of British money in the purchase of Suez Canal shares.
