CANCER BY INOCULATION.

The New Theory Founded on the Burnette Case Is Now Disputed.

Dr. Burnette, a New York physician, died of cancer ten days or so ago, and it was telegraphed all over the country that he was inoculated with the disease through contact with a Mrs. Hatch, who also became inoculated with it by using a speaking tube in a house where there was a case of cancer. If this had been strictly true, it would have caused something like consternation in medical circles and would have necessitated a revision of the methods of handling the disease, and, possibly, it might have led to the discovery of a sure means of eradicating the disease. A malady which is spread by germs is scarcely a hopeless one in these days of marvelous research and discoveries. The theory among medical men has been almost universal that cancer cannot be communicated by inoculation, and the case of Dr. Burnette came like a clap of thunder out of a clear sky.

But subsequent investigation has thrown considerable doubt upon the story. Dr. Burnette really believed that he caught the cancer by touching the woman's tongue with his finger and subsequently rubbing a cut pimple on his face with the same finger, and his physician appears to have leaned to that impression, though he has not yet, we believe, made an official statement of the case. But Mrs. Hatch who is still alive, and who is the person through whom the doctor thought he became inoculated, says emphatically that she never used a speaking tube, and could not have been inoculated in that way, and that Dr. Burnette never touched her tongue with his finger, and, therefore, he could not have been inoculated in that way. She says, further, that cancer is hereditary in her family, and that she has had for many years the premonitory symptoms of the disease. Her memory is probably as good as that of the physician.

It is, moreover, improbable, in spite of Dr. Burnette's impressions, says the Baltimore American, that he examined Mrs. Hatch's tongue with his finger and applied a remedy and failed to wash his hand. It is unlike the act of a physician in good practice. Nor is it more likely that the finger, washed or unwashed, would have retained the virus in sufficient strength to communicate the disease to him some time after he had treated his patient. The hands are in such constant use that the ordinary friction would in a short time destroy the power of the strongest virus. The case is not sufficiently authenticated to unsettle the almost universal impression that cancer cannot be communicated by inoculation. It may be that it can, but this very unsatisfactory case will probably have no effect, one way or the other.

Curious Nature.

One of the most curious natural phenomena, and one which has never as yet been explained by the philosophers, is that in reference to the expansion of freezing water. The case of water is a singular exception to all natural laws of expansion by heat and contraction by cold which apply in cases of all other known liquids. When water is freezing it contracts in bulk down to the point where the mercury reaches the reading of 39 1-2 degrees, or 7 1-2 degrees above freezing, from which point it slowly expands, according to the intensity of cold. No other liquid is known to possess this remarkable property, except that certain metals expand slightly in passing from a solid to a liquid state. But if heat be applied to water after it has cooled down to a temperature of 39 1-2 degrees (the point where it is ready to begin expanding, should a greater degree of cold be applied) it will immediately expand by the universal law. But should we lower the temperature to 32 degrees it will expand by its own special law. Another curious point to be noticed here is this: That the amount of expansion is as great in water lowered from 39 1-2 degrees down to 32 degrees as it is in water that has been heated so that the temperature runs up from 39 1-2 to 47 degrees. These points are certainly odd and curious and worthy of attention and experiment.—St. Louis Republic.

The Coal Production.

The fact appears in the report of the United States Geological Survey that the production of coal in this country during the past 15 years has reached an aggregate of 1,783,874,284 gross tons, and some of the details of these vast figures present a remarkable showing. Thus the anthracite region in eastern Pennsylvania, which covers an area of only 480 square miles, yielded 519,370,268 tons, or nearly 30 per cent. of this total, and the 9000 square miles of bituminous coal area in Pennsylvania produced 470,867,769 gross tons. Of both bituminous and anthracite coal, Pennsylvania produced during the past fifteen years more than fifty-five per cent. of the total output of the country, and yet the coal fields that 65 per cent. of the total output of the country, and yet the coal fields of that state, producing such a large proportion of the whole amount, constitute but little more than 4 per cent. of the known area of coal in the United States. Again, the calculations made by the most reliable authority show that there is no liability of any early exhaustion of the deposits. On the contrary it apepars from the Pennsylvania Geological Survey that the untouched reserve of bituminous coal in that state may be estimated at 33,547,-666,000 gross tons.—New York Sun.

The Billville Banner.

A Georgia editor talks about "taking in the Midway," but every time we tackled it the Midway always took us in.

We learn that during our absence from home we were nominated for the Legislature. This, in the event of our election, will give us an opportunity to make $4 a day and a reputation.

We marched with the exposition soldiers yesterday, and it made us think of the time when we say the boys going to the war and heard the stirring notes of "Dixie" from under the fodder in the barn loft.

The head of our family will deliver her lecture on "Woman's Rights" at an early day before the exposition is over. We will not be present, as we have heard the lecture before.—Atlanta Constitution.

AN OLD AND WELL TRIED REMEDY. Mrs. Winslow's Soothing Syrup has been used for over fifty years by millions of mothers for their children while teething, with perfect success. It soothes the child, softens the gums, allays the pain, cures the colic, and is the best remedy for diarrhœa. Is pleasant to the taste. Sold by Druggists in every part of the world. D. Twenty-five cents a bottle. Its value is incalculable. Be sure and ask for Mrs. Winslow's Soothing Syrup, and take no other kind.—m. w. f. wkly—1 y

Now Backache.

There is only one kind.

And there is only one cure.

So don,t expect to escape or recover until you have used the cure.

Backache always results from trouble or ailment in the kidneys.

Now, the cure is Dodd's Kidney Pills.

It is wonderful how much backache means.

It is not a violent pain—no match for toothache, nor even a corn.

But it means a great deal.

Nearly always it is proceeded by a cold

The circulation of the blood is checked right at the kidneys in such a case.

Take one of the worst and most fatal kidney diseases—Bright's.

The doctor shakes his head and says it is incurable.

This disease is essentially an inflammation of the kidneys.

The blood is checked, or dammed up, right in the kidneys themselves.

Still the heart keeps pumping away against the obstruction caused by congestion or inflamation.

We are not taking about the heart just now, but sometimes it fails at such juncture.

What does it all mean?

It means that by this extra pressure on the walls of the blood vessels, watery particles ooze through. This accumulated water is the condition called dropsy.

It means a breaking down of the tissues of the kidneys, and then the doctors retire or send the patient away somewhere to die.

Or it means the passage of a great part of the blood unfiltered to do harm at the weakest spot.

Is there still hope?

Yes.

The hope—the only hope of such a patient—is Dodd's Kidney Pills.

And they always cure.

Li Hung Chang is said to be the richest man in the world. His wealth is estimated at one hundred million pounds, much of which is invested in Chinese pawnshops and rice fields, and the rest safely tucked away in European securities.

BABY'S BURNING SKIN.

Skin Peeling Off, Skin Literally Afire, Cooled and Soothed by Chase's.

The great feature of Chase's Ointment—Almost instantly it touches itching, burning, eczematic skin, relieving the pain—Is a boon to mothers whose children are sufferers — There is nothing uncertain about it or this way of speaking about it:

"My six-year-old daughter, Bella, was afflicted with eczema for 24 months, the principal seat of eruption being behind the ears. I tried almost every remedy I saw advertised, bought innumerable medicines and soaps and took the child to medical specialists in skin disease, but without result. Finally, a week ago, I purchased a box of Dr. Chase's Ointment, and the first application showed the curative effects of the remedy. We have used only one-sixth of the box, but the change is very marked, the eruption has all disappeared and I can confidently say my child is cured. (Signed)

MAXWELL JOHNSTON,

112 Ann Street, Toronto.

A face that was a scab from forehead to chin cured in 10 days.

On behalf of the Fred Victor Mission Bible Class I wish to express our gratitude to you for the box of Chase's Ointment which you supplied in aid of our charitable work to the infant child of Mrs. Brownrig, 162 River street. Ten days ago the child was awfully afflicted with scald head, the face being literally one scab from forehead to chin, and in that brief time a complete cure has been affected. Surely your gift was worth more than its weight in gold.

STUDY OF THE MOON.

Peculiarities Noted in Its Appearance at Different Seasons.

To the casual observer the motions of the moon appear to be exceedingly whimsical and irregular. If its place in the sky is watched it will be found that it is first north and then south of the sun's path, and that it is sometimes east and sometimes west of that luminary. The last two motions are steady and regular, from east to west, carrying the moon in its endless swing around the heavens, starting at new moon near the sun and progressing until at full moon the whole visible portion of the sky separates the two bodies. After this there are two weeks in which the moon still appears to move backward, approaching the sun from the other side, then, again apparently all of a sudden, it passes the sun and we behold a "new moon."

The north and south motions of the moon are entirely different. While performing its endless journey from west to east there are two special periods in which it either moves far northward or takes up its position low down in the south. In spring the first motion is north, but afterward the general motion is reversed. In December you will note that the full moon occurs at the most northerly point in her course, and in June at the most southerly. This is why we have most light from the full moon of winter and least from that of summer. Observations on these various movements indicate to us the path which the moon moves about the earth, and also shows us that that body in different parts of its orbit is at varying distances from the earth.

This indicates that the moon's path is not a circle, but an elipse, having the earth in one of its foci. The moon being governed directly and held in position by the attraction of the earth, holds its primary movements in a path around our globe, but the attractive energy of the sun, and of the giant planets, perhaps, in a lesser degree, produces motions in the moon which may be summarized briefly as a combination of the six following movements: (1) Its revolution about the earth; (2) its revolution with the earth about the sun; (3) the vibrating eccentricity of its orbit; (4) the slow direct rotation in the "line of apsides"; (5) the retrograde rotation in the line of nodes, and (6) its rotation on its axis.

It would be proper to enlarge this "note" so as to give a full explanation of the causes of each of the above mentioned movements, but as each would require the use of scores of diagrams and technical phrases, such a feat cannot be attempted, as it would take up the whole space allotted to this department.—St. Louis Republic.

COMMANDMENTS OF BUDDHA.

Good Regulations for All Sorts and Conditions of People.

All acts of living creatures become bad by ten things, and by avoiding the ten things they become good. There are three sins of the body, four sins of the tongue, and three sins of the mind. The sins of the body are murder, theft and adultery; of the tongue, lying, slander, abuse and gossip; of the mind, envy, hatred and error. Therefore I give you these commandments:

1.—Kill not, but have regard for life.

2.—Steal not, neither do ye rob; but help everybody to be master of the fruits of his labor.

3.—Abstain from impurity and lead a life of chastity.

4.—Lie not, but be truthful. Speak the truth with discretion, fearlessly and in a loving heart.

5.—Invent not evil reports, neither do ye respect them. Carp not, but look for good sides of your fellow beings so that ye may with sincerity defend them against their enemies.

6.—Swear not, but speak decently and with dignity.

7.—Waste not the time with gossip, but speak to the purpose or keep silence.

8.—Covet not, or envy, but rejoice at the fortunes of other people.

9.—Cleanse your heart of malice and cherish no hatred, not even against your enemies; but embrace all living beings with kindness.

10.—Free your mind of ignorance and be anxious to learn the truth, especially in the one thing that is needed, lest you fall a prey either to scepticism or to errors. Scepticism will make you indifferent, and errors will lead you astray, so that you will not find the noble path that leads to life eternal.

Living in the Country.

The habit of living in the country, by the way, is based upon early life, as is shown by the many "commuters," as the people are called who live out of town and do business in this city.

The "commuter" nine times out of ten, is a country-born man. He is used to the inconveniences of country life, which to him are not inconveniences. A city man who had to put up with what the country man does would go crazy in a week. One never finds your real city man, born and bred in New York, who can ever be really happy in the country, even if the country is only a few miles away.

The eletric light, theaters, street cars, elevated railroads, and that steady, long-drawn, deep bass note which always can be heard in the city—the noise of its beating heart, possibly; the noise of its busy life, at all events—make up his daily life. He gets to love the roar of a big city, and the country stillness would drive him mad in a week.—New York Morning Journal.

A Toy of the Queen's.

Of all the toys at Windsor Castle—and they are many—it is said that the Queen is most fond of a beautiful working model of the heavens. This ingenious piece of mechanism shows the whole of our system, with the celestial poles and the sun. There is a tiny model of the moon, which revolves about the earth, and all the planets, with their satellites are properly represented. For the study of astronomy, and for a right understanding of the celestial globe, there could be nothing finer than this model. It shows our earth turning upon its own axis, and moving round the sun. It gives a perfect idea of the relative positions of the ordinary planets, and it is worked by a clockwork arrangement which is the perfection of ingenuity.

NOT WHAT WE SAY, but what Hood's Sarsaparilla Does, that tells the story of its merit and success. Remember HOOD'S Cures.

TEETH $10 per Set. Partial Set $2 and upwards. Gold and Porcelain Crowning. Best material, best workmanship, best satisfaction.
