RIPANS

ONE GIVES RELIEF.

N.B. TRADE MARK THE VARNISHED BOARD ON WHICH THE GOODS ARE WRAPPED.

Priestley's

BLACK DRESS FABRICS

"Are they not exquisite in their soft richness?" is the constant remark of ladies touching Priestley's famous black dress goods. And that is the truth, but it is not the whole description, for they have a character for refinement, for wearing and draping quality, which no other dress goods can lay claim to. The Priestley's appear to have gathered up all their excellences, and concentrated them in "Eudora," the latest black dress fabric they have given to the world. In every respect equal to the famous Henriettas, it surpasses them in extra width, and weight, and in dust-repelling quality. It is wrapped on "The Varnished Board" and Priestley's name is stamped on every five yards. 30

Catarrh in the Head

Is a dangerous disease because it is liable to result in loss of hearing or smell, or develop into consumption. Read the following:

"My wife has been a sufferer from catarrh for the past four years and the disease had gone so far that her eyesight was affected so that for nearly a year she was unable to read for more than five minutes at a time. She suffered severe pains in the head and at times was almost distracted. About Christmas, she commenced taking Hood's Sarsaparilla, and since that time has steadily improved. She has taken six bottles of Hood's Sarsaparilla and is on the road to a complete cure. I cannot speak too highly of Hood's Sarsaparilla, and I cheerfully recommend it." W. H. FURSIER, Newmarket, Ontario.

Hood's Sarsaparilla Is the Only True Blood Purifier

Prominently in the public eye today.

Hood's Pills cure habitual constipation. Price 25c. per box.

WOMEN CLAD IN WOOD

A NEW PROCESS BY WHICH SILK IS PRODUCED FROM WOOD.

Already Extensively Used—The New Material Costs Less Than Natural Silk and is Said to be Beautiful.

A process has been discovered by which a material closely resembling silk may be manufactured from wood. Even now women are walking about the streets of European cities in the not elaborate gowns of silk in the manufacture of which the worm had no part. In fact, the silkworm has lost its occupation.

The palm for this valuable discovery in chemical science must go to Switzerland, for a native of Zurich, Dr. Lehner by name, is the inventor of the process.

Some years ago he began to make observations in the habits and physical characteristics of the silkworm and became deeply interested in the subject. He discovered the chemical action which took place in the worm in producing its cocoon, and at odd times sought to counterfeit the work of nature. So convinced did he become of the feasibility of his ideas that he soon abandoned all other work and devoted his time to this single study, in which he has achieved a signal triumph.

In the process of manufacturing the new fabric the principal ingredients used are sprucewood pulp, cotton or jute waste, etc., combined with a large quantity of alcohol. The use of the substantial or solid materials mentioned creates a market for what was hitherto of no use whatever, being burned in factory furnaces to get it out of the way.

Spruce sawdust now has a market value, for this, as well as the other materials, are digested by a chemical process in which alcohol plays an important part. The material thus digested is so much like the cocoon spun by the silkworm that when the two are placed side by side in a finished state it takes an expert to determine which is which.

The artificial material at one state is in a liquid state, and of a density about equal to the ordinary syrup of commerce. When in this state a machine of Dr. Lehner's invention, which may be called an artificial silkworm, comes into play. This machine, which is very simple in construction, requiring so little attention that it can be kept at work with about as much labor as is devoted to a twenty-four hour clock, performs exactly the same mechanical work that a silkworm does. It draws from the liquid a continuous unbroken thread of even diameter and unlimited length. As this thread is spun another portion of the machine takes it up and twists it into any desired thickness of yarn with perfect regularity.

Thus the fabric can be made of any desired weight or thickness, so that it will be seasonable at all times.

This artificial silk has been spun in Bradford, England, and worked up into a large variety of fabrics. In the dying, weaving and finishing of these no special treatment has been found necessary. It has been dyed in all imaginable shades and colors, and owing to the peculiar qualities of the material it takes a dye more readily and gives a more brilliant effect than the natural article. In texture it is the equal of the best of Chinese and Italian silks, being soft and silken to the touch. It is expected that it will be used largely in combination with natural silk and cotton for producing brocaded effects. These latter have been so expensive lately as to be out of the reach of all but the fattest purses. The new invention will reduce the cost.

It would seem that this new process would give an immense impetus to the manufacture of textile fabrics all over the world, and it probably will, but Dr. Lehner also differs from the average inventor in that he combines financial cunning with his remarkable genius, so that every yard of this new material made will put many pennies into his pocket.

Patents on the process have been obtained in most of the European countries, and an application for one in the United States is now on file at Washington, as well as in the patent office of the Canadian Government. A company with a capital stock of $1,500,000 is about to be formed in Montreal to manufacture the material. There has already been formed in England a company having a capital stock of $540,000, the inventor receiving $160,000 in cash and $180,000 in full-paid shares, the remaining $200,000 being used as a working capital.

It was originally intended to manufacture the article in England, but when the demonstrating plant was established at Bradford it was found that there was a prohibitive tariff on alcohol used for manufacturing purposes. For that reason the plant was located at Glattburg, near Zurich, Germany, where there is no tax on alcohol used in manufactures. From this place the raw material is sent to England for manufacture.—New York World.

The Last Moments of a Queen.

At 10 o'clock the turnkey, Larivière, was sent by the council into the cell, and to him we owe some knowledge of what passed there. Marie Antoinette said to him sadly: "Larivière, vous avez qu'on va me faire mourir. Dites à votre respectable mère" (the fishwife could not have been present) "que je la remercie de ses bons et que je la charge de prier Dieu pour moi." Three judges accompanied by the gaoler Fabricius, entered the cell. The Queen was kneeling in prayer against her little bed, but rose to receive the functionaries. They told her to attend, another sentence was to be read to her. She replied in a firm voice: "Such a reading is useless; I know the sentence only too well." They insisted, and the clerk read the document.

At that moment Henri Sanson appeared, a young man of plate stature. He said roughly to the poor woman, "Hold out your hands." Her Majesty retreated a step, and pleaded that the King had not been bound. "Faites devoir," cried the Judges to Sanson. "O, Mon Dieu!" cried the wretched Queen. She thought that she was then and there to be assassinated. Sanson roughly seized the shrinking hands, and tied them with cruel force, so tight behind her back. She looked up to heaven, and tried to restrain her tears. Her hair, when cut off, Sanson thrust into his pocket, and twas buried in the vestibule.—The Quarterly Review.

NAPOLEON'S ORIENTAL DREAMS.

He Longed to Follow in the Footsteps of Alexander the Great.

Bonaparte was a child of the Mediterranean. The light of its sparkling waters was ever in his eyes, and the fascination of its ancient civilizations was never absent from his dreams of glory. His proclamations ring with classic allusions, his festivals were adorned with classic ceremony. In infancy he had known of Genoa, the tyrant of his island, as strong in the splendid commercial enterprises which stretched eastward through the Levant and beyond into the further orient; in the histories of Alexander the Great, and his conquest of oriental empires; in youth he thought to find an open door for his ambition, when all others seemed closed, by taking service with England to share the renown of those who were building up her eastern empire. Disappointed in this, he turned with the same lack of success to Russia, already England's rival on the continent of Asia.

It is perfectly comprehensible that throughout his early manhood his mind should have occasionally reverted to the same idea's. The conqueror of Italy and Austria might hope to realize them. Was he not master of the two great maritime commonwealths which had once shared all eastern trade between them? England's intrusion upon the Mediterranean basis was a never ceasing irritation to all the Latin powers. Her commercial prosperity and her mastery of the seas aggravated the exasperation of France, as threatening even her equality in their ancient rivalry. From the days of the first crusade all Frenchmen had felt that leadership in the reconstruction of Asia belonging to them by virtue of preoccupation. Ardent republicans, moreover, saw France's mission in the liberalizing of the continent, and the department of marine under the directory stamped its paper with the motto, "Liberty of the Seas."

Imaginative forces, the revolutionary system, and the national ambition all combined to create ubiquitous enthusiasm. To this the temperament and training of Bonaparte were as the spark to the tinder. It was with willing ears that the directory heard his first suggestions about the Venetian Isles, and subsequently his plans for the capture of Malta, which was to be followed by a death blow to England's supremacy in the seizure of Egypt and the dismemberment of Turkey.—Century.

He Helped a Valuable Beggar.

Dining on one occasion with Baron James de Rothschild, Eugene Delacroix the famous French painter, confessed that for some time past he had vainly sought a head to serve as a model for that of a beggar in a painting on which he was then engaged, and that, as he gazed at his host's features, the idea suddenly struck him that the very head he desired was before him. Rothschild, being a great admirer of art, readily consented to sit for him as a beggar. The next day at the studio, Delacroix placed a tunic round his shoulders, put a stout staff in his hand and made him pose as if he were resting on the steps of an ancient Roman temple. In this attitude he was discovered by one of the artist's favorite pupils, who, struck by the surpassing excellence of the model, congratulated his master on having, at last, found exactly what he wanted. Naturally concluding the model had only just been brought in from some church porch, he seized an opportunity, when his master's eyes were turned, to slip a piece of money into the beggar's hand. Baron Rothschild thanked him with a look, and kept the money. The pupil soon quitted the studio. In answer to inquiries made, Delacroix told the Baron that this young man possessed talent but no means. Shortly afterward the young fellow received a letter stating that charity bears interest, and that the accumulated interest on the amount he had so generously given to one whom he supposed to be a beggar, was represented by the sum of 10,000 francs which was lying at his disposal at the Rothschild offices.

The Dandelion.

The dandelion belongs to the largest, oldest and most widely diffused order of plants. While other orders of plants have died out and become mere fossil remains in the rocks, this order has survived the geological changes so many different periods on account of its power of adapting itself to those changes. And these changes in their turn have only made it better suited for all the varied soils and climates of the earth at the present day.

We find members of this order in part of the globe, in places as far apart from each other as they can be. It is the prevailing and dominant order of vegetable life, the most highly finished and the most successful family of plants. And the dandelion is one of the most perfect forms belonging to it.

It is the head and crown of the vegetable kingdom, as man is the head and crown of the animal creation; and it is curious how the highest type of plant always is found only where man, the highest type of animal life, is found, and where he dwells or cultivates the soil. It is never found apart from him; it follows him wherever he goes—to America, Australia and New Zealand; and there in the new home becomes a silent but eloquent reminder of the dear old land he may never see again.—New York Times.

Scientific Uses of Liquid Air.

In a recent lecture on the scientific uses of liquid air Professor Dewar froze a soap bubble by means of the intense cold produced near the surface of liquid air. The same effect, however, was obtained by Mr. Pim by natural cold in Colorado last winter, when the thermometer stood at 14 degrees below zero, Fahrenheit, that is to say at 46 degrees of frost. Acting on the suggestion of his little boy, who was blowing soap bubbles, he sent one into the cold air outside. It froze instantly, and settled to the ground as a hollow shell of ice. When the thermometer rose to zero, the bubbles would not freeze, but whether this was owing to the change of temperature or some other condition of the air Mr. Pim is unable to say.—London Globe.

COMMONPLACE ECONOMY.

Applied to Our Food According to the Rules of Health.

In the domestic training of our girls we must not overlook this one important thought of economy. It should not come on the best of important things as a secondary consideration. By economy we do not mean the purchasing of cheap food or stinting in the quantity. It is simply extravagant and profitless to look around for cheap eatables. The economy consists in purchasing the most nourishing food and preparing it in the most palatable and proper manner, not wasting what might be left over at each meal. It certainly will require some thought and time, but it can be done easily by making use of the hints and receipts that are accessible to all. It is these little odd concomitants that make our bill of fare eke out. Yet we must urge that it cannot be done to satisfaction unless judgment and common-sense are used. This we cannot impart to the housekeeper or cook. It is not a natural gift, then by all means it must be cultivated in order to be a successful cook and economist. "Wilful waste brings woeful want," is an old adage with which all are familiar and the very quintessence of truth. It is not the greatest quantity we consume that nourishes, but only what we digest. If we would but consider this more seriously there would not be in the world so many dyspeptics.

Too much thought or time cannot be expended on this last great truth, that 'tis not quantity, but quality we need. Variety, too, must be seriously considered. To sit down to meal after meal of the same things is tiresome; our natures require a change in this particular as well as in other things.

We may just now say a few words in favor of the pineapple, one of the most delicious fruits we can have. Yet how often we hear it asserted that it is too indigestible to eat. The reason of this, too, is because it is not properly prepared. To put it before human beings cut in slices we consider a crime, for thus prepared the very hard and indigestible core is eaten, which cannot be digested any more than a piece of leather. Then what must necessarily follow is suffering, and the sufferers vow they will diskard it forever. Now the better way is, after is has been pared, to take a fork and pick off the substance from the core in fine pieces, then you can eat it with as much pleasure as a berry, and feel no more discomfort from its effects. When you gaze at that great hard core, from which has been taken in small bits the delicious fruit, you'll not wonder it can not be eaten without having to pay the penalty. Thus to be an economical housekeeper much study is required in the selection, preparation, looking carefully to the life-verbs that with judgment do more than waiter or dream could be done. The housewife scarce realizes how much is wasted by being burned or in any way spoiled in the cooking.

Painless Dentistry!

TESTIMONIALS.

J E McDonald, D D S,—

The seventeen (17) teeth you extracted for me on Thursday, May 30th, at Doctor Robertson's, Crapaud, gave me less pain than I have suffered many times in having ONE taken out. I shall send all my suffering neighbors to you.

With gratitude yours,
MRS HUGH GILLIS.

Rose Valley, May 31, 1895.

Doctor McDonald, Dentist,—

Dear Doctor,—For two years I have been a constant sufferer from toothache, always in dread of having them taken out. Hearing of your success I determined to try your method, and now, after having you extract six for me, I can conscientiously say you are the only one who ever extracted a tooth for me WITHOUT PAIN. Truly yours,

MRS JAS DEVEREAUX.

Kelly's Cross, May 31, 1895.

McKinnon's English Ointment.

MR. NEIL MCKINNON,—

Dear Sir,—For five years I was a sufferer from eczema. Physicians could not help me. At last I bought a box of your Ointment, which helped me wonderfully, while two boxes made a complete cure. I can recommend it to all others similarly afflicted.

ALEX. MCKAY.
