## Building Features 10 Most Modern Alleys

One of the most modern structures of its kind in the Maritimes—the Roll-Away Club and Ballroom will be officially opened this evening by His Worship Mayor B. Earle MacDonald.

Built by M. F. Schurman Co. Ltd. for the genial proprietor, Joe MacDONALD, to replace the old Sporting Club—a wooden building destroyed by fire last February, the new entertainment centre is of brick and steel.

From its canopy-topped entrance to its spacious ballroom it is an impressive edifice and promises to play an important role in the

community life of the City and Province. Congratulations will be showered on Mr. MacDONALD in providing such a centre.

The alleys are complete with the automatic foul lights and the provision for pin setters which can be installed within an hour. The pin setters would do away with the need of pin boys, but will not be installed for some time.

The operation of the foul lights will be a new experience for most of the Island bowlers. As soon as the bowler touches the foul line the lights will be flicked on and a bell will ring indicating that the bowler's score on that ball is dis-

credited. The alleys are of regulation length, being 63 feet long and having bowler's run of 16 feet. The wood in each alley is half hard pine and half maple.

### Basketball Court

Charlottetown will also have a new basketball court in this modern building. And it will be one that can accommodate a large number of fans, a handicap which promoters of the sport have long suffered here.

On the second floor is located the Ballroom which should prove

a popular attraction for dancing, parties and other social functions. It provides a new auditorium for meetings and gatherings. A cloak room is located at the entrance to the Ballroom.

A canteen at the head of the alleys has been erected and a lounge room for ladies has been built just inside the main entrance.

A steam system has been installed which can either heat up or cool off the building within twenty minutes.

Lighting is a feature of the building and introduces something new in the illumination of a building of this kind.
