## Our New Orleans Letter.

**Beautiful Weather, Beautiful Women, and Beautiful Buildings. —Business Booming Locally from the Expansion of a Grand National and International Idea**

(*Special Correspondence.*)

NEW ORLEANS, Oct. 28, 1884.

Tom Moore, in one of his much-quoted poems, sings of "a beauty forever bewitchingly bright, like the long sunny lapse of a sunny day's light, shining on, shining on by no shadow made tender, till love falls asleep in the tameness of splendor." He then proceeds to contrast it with a different genus of loveliness "ever in motion that plays, like the light upon autumn's soft shadowy days." It has always been a mystery to me how such a rank little toady and tuft-hunter as Tom Moore could have written such pretty verses with occasional "drops" into real poetry. Especially how he could rhyme so royally about the face of nature in that foggy little Island from which he escaped only once to our shores; and *then* alas! disgraced himself still further by repeating a stale libel on a far greater "doubting" Thomas—the statesman Jefferson—of whom

EPIGRAMMATIC TOMMY

declared that "he dreamed of freedom in a slave's embrace." But those lines by Moore keep singing themselves through my head in this city, since here is continually forced upon the fancy a kind of curious connection between the average comeliness of the women and the balminess of the weather. Whether such an idea can be scientifically sustained may be doubted, but the two unmated facts are easily admitted by one who has ever lived here for a year. And the weather here now is such that merely to breathe and live becomes a joy: a luminous luxury. A suspicion of frost in the light wind of morning—a short, heavy shower at noon to cool the air—a bracing breeze from the north at night. It is the sort of weather that lends briskness to men's minds and bodies, and makes business boom.

And business *is* booming. New Orleans has evidently determined to coquet no more with the vision of her departed grandeur, but to rise in the near the future to a higher commercial rank than ever—the right that should be hers by right of climate and geographical position. When we consider that of the annual commerce of Central and South America, estimated at $676,000,000, we, the United States, only control one-fifth; it becomes apparent that something ought to be done to gain

OUR FAIR SHARE

of this trade, for New Orleans being the natural grateway, naturally has been anxious for some time past to make some big bid and attract such commerce. She is now carrying her point with a World's Exposition as the vehicle. In this enormous enterprise the Latin races are manifesting an enormous interest. Commissioners from Mexico and South America have been in this city for months, and their contributions to the attractions of the Exposition, from a popular point of view, bid fair to outweigh those of all other nations, though Japan, China and Persia are pushing them hard. The best evidence of Latin-American interest is the beautiful building with which Mexico adorns the Exposition grounds.

But in iron compartments at Pittsburg by the Mexican government, from the design and under the supervision of their architect, Senor de Yharrola, this structure is a triumph of taste and architectural achievement. A quadrangle 192 feet front by 288 feet deep incloses an open courtyard 115 feet by 184 feet, according to the general plan of a Mexican gentleman's residence, except that it has more entrances, and may therefore be more entrancing. Graceful, slender turrets, or miniature minarets, at each corner and in the centre of each side save it from any accusation of straight-line sameness, and give ample chance for a wealth of florid ornamentation in the most Oriental style. The coloring, too, is ravishing, with its

CUNNING CONSPIRACIES

of gold and green and maroon, with touches of intense red here and there. The interior gallery running around the courtyard is terraced, and here will be placed a marvellous museum of the brilliant birds and fantastic bowers of Mexico, making a kind of hanging garden which will enchant all beholders. But altogether the most attractive feature of the Mexican representation will be the octagon building, designed by Mr. de Ybarrola for the mineral display. This has been located near the Main Building, in the most conspicuous part of the grounds, and will be a specimen of the purest Saracenic architecture of the third epoch. Each face of the octagon is thirty-two feet in extent, thus making an area of seventy-eight eight feet diameter, the whole supporting a wonderfully exquisite dome thirty feet high. It is being built entirely of iron; a combination of columns and arches, with details of the most elaborate and delicate tracery. Viewed at a distance it imparts the impression of being made of the finest and

RAREST POINT LACE,

and the dome, owing to a skillful arrangement of tints beneath the iron filagree, is fashioned so light, so buoyant, so intangible, that it can hardly seem to rest upon but to be poised above the sub-structure. The architect has arranged to close the spaces between the supporting columns with panels of hard wood elaborately carved in Moorish designs, thus enabling him to close the building or to convert it into an open-air pavilion at will. Truly as the starry Galileo hinted the world does move and the movement, now in this far Southern land of langnor, is almost magical in its variety of direction and its richness of result.

HENRY AUSTEN.

## Woodville, Lot 54.

On the road from Cardigan Bridge to Launching Place, at a distance of about five miles from the former, is situated the farm of the Hon. John Goff. This farm consists of between 400 and 500 acres of land; 365 acres of which are under the plough. It is in many respects a model farm, as nearly all its fields contain ten or twenty acres, and a great many of them are bordered with handsome rows of birch and maple trees. The buildings are situated near the centre of the farm, within a short distance of the main road, and are very commodious and comfortable. The dwelling, which stands on a gently sloping hill, overlooks the mills and mill pond of Mr. John Poole, and the view from the front windows is very picturesque and pleasing. The grounds surrounding the house are elegantly laid off, planted with many fine shade trees, and are enclosed with hedges of clipped spruce. The orchard, situated at the east side of the house, is pretected on the north and west sides by groves of spruce and fir, and contains many fine trees, some of which cover over one hundred square feet It yields annually, large quantities of fine apples, such as the Emperor Alexander, Gravensteins, Tameuse, and many other varieties. Mr. Goff's orchard proves that fruit can be grown successfully on this Island, and his name should be included among the pioneer fruit growers of this province. The dwelling house is built in the Gothic style of architecture, one and a half stories high, and is a large and roomy building, fitted and furnished in a style not often met with in the country. One especial part of the building, is the dairy, which is connected with and yet separate with the main building.

The dairy production of Woodville Farm has been long favorably known, and a ready market at the highest prices is obtained for it. The outbuildings are very extensive, and consist of main barn over 100 feet long, with two wings each 30 or 40 feet in length, a large piggery, and a waggon and implement house. A hay house 72 ft. long, with a post of 16 feet, and fitted with the most improved gear for rapidly saving hay, has been built during the past summer.

The system of farming followed by Mr. Goff shows what can be done when capital is skilfully and judiciously expended, and his experience proves that farmers on Prince Edward Island can afford to hire laborers and pay them. It is a great pity we have not more men with capital, who take a pleasure in making two blades of grass grow where only one grew before. If we had, so many of our young men need not go away to the States or other countries to make a living.

***

## Red Point Notes.

The work on the new bridge at Black Pond, is progressing favorably, and we think will, when finished, reflect credit on the contractors.

The Literary society here has again began its work, and offers to the young men a broad field for cultivation. We trust many may, during the long winter evenings, avail themselves of the opportunities afforded, and be much profited thereby.

A miller in this vicinity has, we learn, been cited to appear before the Court of Chancery, for what purpose we know not—probably to give somebody a chance to throw good money after bad. Millstones in this section do not grind out much glittering wealth, and 'tis not a very honorable way to regain money foolishly invested, by having recourse to an insurance policy. Insurance companies might do well by keeping a lookout for such risks.

Farmers here are feeling sorely the need of a breakwater, having to haul their potatoes to Souris for shipment, over hills and through mud, while at their own doors is a breakwater half formed by nature already; and the expenditure of a few thousand dollars here, would give us a place where we could ship our produce,—to say nothing of the many other benefits we would derive from it; for, as we are now situated, we cannot embark in any kind of trade for want of a place of shipment. Messrs. Robertson are doing a fair business, but have to deduct from the prices paid the cost of hauling to Souris, whereas if we had a breakwater here they could pay as good prices as in Souris. Is the Government blind to the wants of the people? Let our representatives put forth their efforts in behalf of the work wanted here.

OBSERVER.

November 3rd, 1884.

## Cardigan Notes.

The farmers in this section of the Island have a great advantage and farms are rapidly increasing in value, but still there are many good farms near here wanting capital to make them more productive, that can be bought at low figures.

Twenty-three schooners have been loaded with oats, potatoes and turnips at this port during the past month and have sailed to their destination. Although the crop of potatoes is not over half what it usually is, those shipped here are an excellent size. The importance of Cardigan Bridge as a shipping place may be estimated from the fact that farmers are hauling produce a distance of fifteen miles to it. Last Wednesday, the 29th ult., about 3,000 bushels of potatoes were shipped besides oats and turnips.

November 4, 1884.

A CARD.—To all who are suffering from errors and indiscretions of youth, nervous weakness, early decay, loss of manhood, &c., I will send a recipe that will cure you, FREE OF CHARGE. This great remedy was discovered by a missionary in South America. Send self-addressed envelope to REV. JOSEPH T. INMAN, *Station D, New York.*
