## ENGINEER GRAHAM.

Of Montreal, Cured of Diabetes by Dodd's Kidney Pills.

MONTREAL, Aug. 6.—Proof positive and convincing has been already given in Montreal, that Dodd's Kidney Pills are the only sure cure for that dread disease Diabetes. And day after day fresh evidence comes to light, to make the proof more emphatic and convincing.

Engineer James Graham, 50 Victoria Square, says:—"I suffered with Diabetes for six years. One of the best doctors told me I could not be cured."

"I read of Dodd's Kidney Pills and decided to try them. Three boxes made me well, and I have not suffered from Diabetes since."

Such cures as this prove the efficacy of Dodd's Kidney Pills.

There may be some pleasant features about being a king, but in the long run it appears to be more satisfactory to be a Canadian citizen with simply a 45 cent straw hat for everyday wear.

## IMPORTANCE OF LIME.

Two leading experts, says the "London Fruit Grower," tell us that "nitrate of soda is the best and cheapest source of nitrogen." But neither of these authorities will ignore the atmosphere, four-fifths of which is nitrogen. They refer to fixed nitrogen, for it is a curious fact that unless we can get some of this surrounding ocean of nitrogen united with some earthly ingredient we cannot make it available for fertilising purposes. Yet nitrogen is the leading element, and the most expensive one in fertilisers. The three leading ingredients which we must constantly be applying to the soil are nitrogen (which is an atmospheric element,) potash and phosphoric acid, (which are classed among the mineral elements). Other elements are required, especially lime, and this frequently has to be supplied to the exhausted surface soil for although it is an abundant and exhaustless soil material, as a whole it is not evenly distributed, and its presence is beginning to be found necessary to enable clover and other leguminous crops to gather nitrogen through the bacterium nodules that form at their roots. In view of this fact we think lime should be closed among the necessary ingredients of a complete fertilizer. These facts are of modern discovery, and are beginning to have valuable effects in improved agriculture. If a soil contains potash and phosphoric acid, but not lime, leguminous cropping their nitrogen from the atmosphere, will not grow on it, or but feebly, the process of nitrogen at once begins, and clover and other leguminous plants spring into great luxuriance, supplying not only the nitrogen but organic matter for the enrichment of the soil. Remember that lime is one of the indispensable elements of fertility.
