"Shorter" Pastry and "Shorter" Bills.

We are talking about a "shortening" which will not cause indigestion. Those who "cook a thing or two" about Cooking (Marion Harland among a host of others) are using

COTTOLENE

instead of lard. No; but the purest, healthiest and cleanest ingredients go to make up Cottolene. Lard isn't healthy, and is not always clean. Those who use Cottolene will be healthier and wealthier than those who use lard—Healthier because they will get "shorter" bread; wealthier because they will get "shorter" grocery bills—for Cottolene costs no more than lard and goes twice as far—so is but half as expensive.

Dyspeptics delight in it! Diaphanous and endorses it! Chefs praise it! Cooks extol it! Housewives welcome it! All live Grocers sell it!

Provincial Loan. PROVINCIAL TREASURY, Prince Edward Island, 25th June, 1894. Under authority of the Act of last Session, 57 Vic, Cap. 6, the Government of Prince Edward Island is now prepared to receive, from any person or persons, Temporary Loans, at 4 per cent. interest, on call or on such terms may be agreed upon.

This will afford a good opportunity for the investment of a large or small sum for short or long periods. ANGUS McMILLAN, Prov. Treasurer. June 25—pat

Columbia Bicycle Tires. A difference of opinion exists among riders regarding the merits of the single and inner tube tires, and a choice of the two styles is offered on the 1894 Columbia wheels. You can have the strong resilient and easily repaired Columbia single tube or their new inner tube, which you will undoubtedly pronounce far ahead of any other tire of this type. Full particulars in catalogue, which you can obtain from R. M. Young, Agent.

FOR SALE. The Dwelling House on Fitzroy Street, now in my possession. The premises may be inspected daily from 1 to 4 p. m. For terms apply to Messrs. M. & D. McLeod, or to the subscriber. JAMES McLEOD. aug6-3w m w s

TITANS OF THE NORTH.

LIEUT. SCHWATKA WRITES OF GI-GANTIC ICEBERGS.

The Frozen Mountains That Inspire Awe Around the North Pole—Thrilling Arctic Scenes—The Terrible Dangers Which Attend the Submerged Monsters.

An immense iceberg is one of the stupendous, colossal, and awe-inspiring sights, as an earthquake, an avalanche, or some of earth's convulsions in presence of which many men stand dumb and overpowered with the sense of his own weakness and littleness. One who has ever seen an immense stately mountain of ice will not credit it with erratic movements or capricious and undisciplined nature, so impressive is it in its awful grandeur. Still they will often vary their monstrous movements by double somersaults and tricks of the most grotesque character on the ever turning and breaking up of a moving mountain.

I have never witnessed but one such sight, and surely it looked as if the "great waters of the deep were breaking up" and the end of all things had come. Immense green waves went thundering by as if a hurricane had been raging for hours across the sea that but a short time before was as quiet as a mill pond. Great flying flecks of foam were dashed down from dizzy heights above, and the slippery sides were so covered with cascades formed from the waters that had been lifted up by the rapidly overturning mass.

Our first intimation of the coming convulsion was a dull shock against our ship's side under the water, somewhat as if a submarine blast had been exploded, and a moment after a huge rising of the sea from one side of the iceberg was apparent, and through this vast mass of uplifted waters broke a snow-white berg that had been detached from the crystal mountain far down in the ocean's depth, and that came down to the surface with a swift and apparently lifted it half way out of the sea and kept it spinning and splashing for full five minutes afterwards.

The release of this portion of the mountain from its frozen fetters below had disturbed the stable equilibrium of the parent berg, and but a few moments afterwards it began its stupendous swaying, as if some earthquake were influencing it in one of its gigantic careering motions over and over again in a mass of milk-like foam that sent its maddening tidal waves tearing across the great depths that would have engulfed any vessel near it. It only sunk from sight a moment, when it rapidly reappeared with a creamy crest that poured down its icy sides in a shallow sheet of white.

Woe to the ship that ventures too near one of these monsters of the deep just as it has determined to give a display of its Arctic antics, for if it be broadside to the tremendous tidal wave that comes curling outward from the centre of commotion, and has not time to turn end on to meet the rapid rush of water, it may be thrown upon its beam end, as a sailor would say, or thrown over on its side, by the stress of the wave, then filled with water and sunk. Such accidents have been known to happen in the iceberg region, and probably some of the mysterious disappearances of cruises in polar regions may be accounted for in this way. So it behooves the navigator in Northern seas not to approach too near these Arctic arctodes when they are feeling in their best moods for a little quiet fun of the sea.

And they generally do give them a wide berth when sailing in these icy seas, not only fearing the frightful waves which they set in motion, but when they turn a sharp corner, as a sailor would say, directly alongside the monster, the stress of the wave may come up from below and crush in the bottom of the ship. Then again if the boat has only sailing power, as is the case with the majority of the vessels in the Arctic region, she is liable to meet the most erratic gusts of wind and sudden squalls that can upset her quite as suddenly as a tidal wave.

Every one has noticed how much more powerful and erratic are the winds around the base of a very high building in the city than elsewhere. And so with a great iceberg. It catches all the wandering winds of high heaven, and directs them downward, twisting and turning around its base, until it is very possible for a sailing vessel to venture near these eddying gusts. So between the little icebergs popping up from the water below and falling down from above, and the chance of the colossal mass of them all turning such a corner and capping the vessel, the navigator has to be fairly set and clear of the monster, and to do this he has to be well posted as to the whereabouts of the berg, and to do this he has to be well posted as to the whereabouts of the berg, and to do this he has to be well posted as to the whereabouts of the berg.

The Arctic whaling masters, who are the best navigators in these ice-land waters, call the little bergs that break off the big ones, either above or below the water line, "iceberg calves," and they have a very good reason for so calling, as they have already given, although they do pull up alongside a small calf and cut enough ice to fill up their iceboxes and have enough ice water aboard until they encounter another, which is very often the case. When the bergs are small, they are much bigger than the largest building in New York or Chicago. Each one of these little (by comparison) icebergs still sheds smaller ones as it slowly crumbles to pieces on the water, while the larger ones, which are much bigger than the largest building in New York or Chicago, are much bigger than the largest building in New York or Chicago.

So they keep dividing and subdividing as they march along until the mountain that broke off from the Greenland glacier in the Arctic seas really becomes millions of millions of ice in the temperate waters of the warmer seas, and then disappears altogether. And every time they split or assume we have another scrobalic performance. It may be only the smaller ones perform if the dismemberment is not of enough importance to disturb the parent, while the larger ones they set up a polar dance that lasts some minutes. Some Arctic authorities say that they have seen ALL DISEASES of the blood are cured by Hood's Sarsaparilla, which by its vitalizing, enriching, and alterative effects makes only PURE BLOOD.

THE GENERAL passenger and freight agent of the I. C. R. at Winnipeg reports a much freer movement visible all along their line in passenger traffic and the Australian boats have had for several weeks more freight consigned to them than they possibly could carry.

USE SKODA'S DISCOVERY, the great Blood and Nerve-Reviver.

NOTICE. LAND SURVEYING, &c. The subscriber is now prepared to make Surveys of Land, run Boundary and Division Lines, furnish Plans, etc.; also, Mechanical and Architectural Drawings, Plans, Specifications and Estimates.
