SEED SOWING

Continued from page 13

The surest way with small seeds is to take a few in the hand, and let them fall through the fingers into the drill which has been prepared. Get close to the ground, and with a little practice you can quickly acquire control so that the seeds will be evenly distributed, each sufficiently distant from the next to prevent entanglement.

Keep the seeds in line as well as you can. It helps to let the garden line which was used in making the drill remain in place until the seeds have been dropped.

It helps to mix the very small seeds with dry sand before you begin to sow, using two or three times as much sand as seed. This spreads the seed out better.
