ACETYLENE APPARATUS.

Experiments Showing How the New Can be Generated for Practical Use.

Few chemical discoveries have attracted more interest than the recent one of the method of manufacturing acetylene on a large scale. The production of the calcium carbide from which the acetylene gas is made by simple treatment with water bids fair to become a commercial process, and we have every reason to hope that the material will soon be produced by the ton. There is something fascinating in the idea of being able to evolve a gas of about 300 candle power by so simple a process. While the crudest possible apparatus, such as a tumbler of water, is sufficient to illustrate the production of the gas, the object of the present article is to show how a better demonstration can be produced with very simple appliances.

To show the gas with a tumbler of water, it is sufficient to drop into it a piece of the calcium carbide as large as a pea; the gas is at once evolved in large quantity, and a match can be applied repeatedly to the accumulation of bubbles on the surface of the water, giving a number of successive lightings. The apparatus, which gives more satisfactory results, is constructed from a battery jar and lamp chimney as the principal elements, and is made on the lines of the old hydrogen evolution apparatus.

To the top of the lamp chimney, which should be of a large size, a cork should be tightly fitted. Unless the cork is better than the majority, it should be waxed or paraffined, which is very easily done by placing some fragments of wax or parabine on it and melting the material with a hot soldering iron or poker. Through a central perforation a tube is inserted fitted with a stop cock and as a gas burner; this latter must be of the smallest size made, the Bray fishtail burner answering about the best of any yet tried. Merely to exhibit the gas, a simple jet may be made by drawing a glass tube almost to a point or by drilling a very small hole in a cap fitted to the pipe leading from the stop cock. Through a hole a little to one side of the evolution pipe a wire passes which moves up and down with some friction through the whole. Its lower end is formed into a hook, to which is suspended a little basket made by bending up a little bit of coarse wire gauze. A pieces with one-quarter inch meshes will be about right. The suspending wire is bent at the top to give it a better handle.

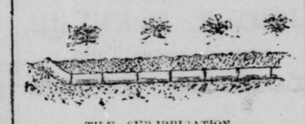
To operate it, the lamp chimney is placed in the jar, the water is poured in until within an inch or two of the top, and a piece of calcium carbide half the size of a walnut is placed in the basket, which is drawn up until pretty close to the cork. The cork is now placed in the lamp chimney and pressed down so as to make it fit tightly, and the wire slowly worked down until the basket becomes partially immersed in the water. The level of the water is at once depressed as the gas is evolved, and if the cock is open the air and gas within the chimney begin to escape. As soon as the odor of the escaping gas is strong, it can be lighted and will burn for five or ten minutes with great steadiness. If the pressure decreases and the water rises, it comes in contact with the calcium carbide, more gas is evolved, and it falls again.

The appratus may be further simplified by omitting the stop cock, which is unnecessary, and a bucket may be substituted for a battery jar. It may also be necessary to secure the chimney against floating upward.

It is well before lighting the gas to hold a test tube over the outlet for a few seconds until filled with the gas, and to light it with a match or at a gas burner. If the contents do not explode, it is safe to light the jet on the chimney; if it does explode, the light should be deferred until purer gas is evolved. Two or three minutes are sufficient to get it in working order. it must also be remembered that it is essential to have a very small burner, as otherwise the gas will smoke and the supply will be insufficient to obtain a satisfactory flame. The suspending wire must fit tightly, as if it slips down the apparatus will blow out or overflow. A very slight immersion of the carbide starts it.—Scientific American.

Underground Irrigation.

Underground irrigation is often more useful than water applied on the surface, for small fruits and forced vegetables, especially the strawberry when the plants are developing fruit. The sinking of empty flower pots here and there through the plot, and keeping these filled with water, which gradually soaks out into the surrounding ground, may answer for a small plot of berries, but for a larger area the plan suggested in the accompanying illustration will be



TILE SUB IRRIGATION.

found more serviceable. Between every second row of plants is laid, a few inches below the surface, a row of drain tiles, the first one in each row coming to the surface. With a hose each row of tile can be filled in a moment and the water will be absorbed by the earth and reach the roots of the plants as needed, and there will be no baking of the surface soil. If desired the first row of tile could be extended around through the various rows and the whole filled from one point. A modification of this idea is used with many other crops.

Bottle Bells.

Take two chairs, two sticks and 48 wine bottles. Rest the first stick on the backs of the chairs and second stick across the ends of the two seats, the chairs being turned back to back. Now hang the empty bottles to the sticks with strong strings, each string having a double loop. If the bottles are all of the same size and shape, they can be tuned by pouring water into them—the more the water the lower the note. Strange to say, every empty bottle which is struck gives out an entirely different note. Besides wine bottles ordinary medicine bottles may be used. With a musical ear it is not at all difficult to arrange the bottles and fill them with water to just the right height to produce the different notes. Now take a light stick with a "spring" in it, and strike a tune on the bottles.

The Cheapest is Pond's Extract.

Because on "Small" bottle, 50 cents, has more beneficial effect than one gallon of other preparations sold as being the "same as" or "equal to" Pond's Extract. For all pain and soreness." ...

Parents Must Have Rest.

A President of one of our Colleges says: "We spent many sleepless nights in consequence of our children suffering from colds, but this never occurs now: We use Scott's Emulsion and it quickly relieves pulmonary troubles." .....

KNOWLEDGE

Brings comfort and improvement and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adapting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the remedy, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative; effectually cleansing the system, dispelling colds, headaches and fevers and permanently curing constipation. It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in 75c. bottles, but it is manufactured by the California Fig Syrup Co. only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

Good Photographs.

A fine lot of Photos, taken by MR. C. LEWIS, were laid on our table a few days days ago. Those Photos are of gentlemen who attended the funeral of the late Sir John Thompson at Halifax—Lieutenant-Governor Howlan, Bishop McDonald, Dr. Doyle, and many others. They are to be put in the large picture, which is to be painted at Toronto, of the interior of the Church, representing the funeral. Mr. Lewis has the best fitted Gallery in the Province; the arrangements of light are correct; he uses the Dallmyr Lens, which is free from distortion. All work first class; prices very reasonable.

RAILWAY MANAGEMENT.

A Lesson From Australia.

The Premier of New South Wales has had prepared an interesting return in connection with the railway system of that colony. This document significantly illustrates the difference between political and non-political control of state-owned railways. According to the figures given the gross earning of the New South Wales railways for the seven years prior to the coming into force of the present Railway Act in that colony —in 1888 - increased by £2,668,164, and the capital from £15,843,616 to £2,622,748. The entire additional gross earnings were spent in working the lines and the New South Wales Treasury had to contribute no less than £141,656 in addition, to defray the current expenses. The accumulated increase in gross traffic for the last six and a half years amounted to £3,429,596, 66 per cent. of which sum (amounting in the aggregate to £2,262,626) was net profit to the New South Wales Treasury. After £300,000 has been provided towards the annual repayment in connection with the £1,000,000,000 vote, there will be still a credit balance of £1,962,626 for the period named, and this in spite of a sum of £1,400,000 spent out of current working expenses for the relaying and improving the permanent way, and in bringing the rolling stock into better condition. Rates have been reduced, improved facilities for travelling have been given in all directions, and the materials required for the construction of new lines have been carried at greatly reduced rates, thus enabling the expenditure on the capital account to be kept down. It is confidently anticipated that for the year ending June 30 next, the working expenses will not exceed those of 1888, while the traffic will be about £500,000 in excess of what it was in that year. The New South Wales Railway Commissioners think they are correct in stating that this state of things is almost unprecedented in the history of railways, taking into consideration the fact that rates have been reduced, improved facilities afforded, that greater expense has been incurred in the maintenance of the railway property, and that the rates of wages of the staff have not been reduced in any way.

PETTY JEALOUSY.

Grand indeed were the sentiments of the President of the Winnipeg Board of Trade when he said: "Whatever benefits the Dominion as a whole, interests and should gratify every Province." No petty jealousy lurks there.

Increased trade with Australia may benefit British Columbia more than the other Provinces, but nevertheless the latter should be interested and gratified. A fast Atlantic service would benefit the Maritime Provinces; then let the West support it. A national Insolvency Bill would benefit Toronto and Montreal merchants more than others, but why should petty jealousy not allow them to be benefitted when not harm but justice is being done?

Every merchant who makes money in a town helps that town; why should his fellow merchants be jealous of him? A Board of Trade in a town would benefit some merchants more than others, but the spirit of jealousy should not prevent the smaller one from supporting it ungrudgingly. Petty jealousy among its citizens is killing many a Canadian town to-day, for without unity there is no strength.

There is too much jealousy among competitors in the dry goods trade. It leads to gossiping, suggesting, slandering and backbiting. It fills the air with unpleasant odors. Peace is driven from men's minds, and dark, cruel discord makes their lives unpleasant. Let greater liberality prevail, for is not this the Age of Liberty?—Canadian Dry Goods Review.

AN INDIAN'S MISTAKE.

(From Harper's Young People.)

They say that two Indians belonging to one of the large American shows of life in the wild West, while visiting London were much interested in the sights to be seen in the London streets. Day after day they would walk up and down the most crowded streets and gaze on the people and into the shop windows like a pair of children at the circus. One day they stopped before the shop window of a wig-maker and stared at the many varieties of wigs on exhibition there until their eyes nearly fell out. Finally one of them nudged the other, and with a shake of his head remarked, "Ugh! mighty brave man! Big fighter; much scalp!"

A PARISIAN JEST.

(From Harper's Young People.)

There are some very funny fellows in Paris, and many of them like nothing better than to play their jokes on entire strangers. One of these walking along one of the largest business streets one day saw before a clothing shop a great placard stating that the concern had 100,000 overcoats for sale.

Entering the shop the joker asked the man in charge if he were very busy.

"No," replied the salesman. "What can I do for you?"

"I see," said the jester, "that you have 100,000 overcoats for sale, and I thought I'd like to try them on."

A law suit was recently brought against a New York milk dealer for selling watered milk. He testified in his own defence that a lot of snow slid off a roof into his cans, but this failed to convince the judge.

Even reform comes high. The Lexow investigation bills in New York foot up over $67,000, and there is no telling whether the eggs in the reform nest will ever be hatched.

The Democrats of the six New England States were without a representative in the United States' Senate during the last Congress and will be without a representative in the next; yet in the Presidential election of 1892 the Democrats polled 176,000 votes in Massachusetts, 82,000 in Connecticut, 48,000 in Maine, 42,000 in New Hampshire, 24,000 in Rhode Island, and 16,000 in Vermont, a total of nearly 400,000. Florida, in which the Democrats polled 30,000 votes, has two United States senators, and Mississippi, in which they polled 40,000, has two also. The inequality of senatorial representation is, in many respects, marked, but in no particular more so than this.

GREAT BATTLES are continually going on in the human system. Hood's Sarsaparilla drives out disease and Restores Health.

Experience Has Proved It

A triumph in medicine was achieved when experience proved that Scott's Emulsion would not only stop the progress of Pulmonary Consumption, but by its continued use, health and vigor could be fully restored. ...

Do you think it right to neglect a cough or cold? Hawker's balsam will speedily cure coughs, colds, and all bronchial troubles. .....

FRANK LEAKE
Oshawa, Ont.

Pains in the Joints

Caused by Inflammatory Swelling

A Perfect Cure by Hood's Sarsaparilla.

"It affords me much pleasure to recommend Hood's Sarsaparilla. My son was afflicted with great pain in the joints, accompanied with swelling so bad that he could not get up stairs to bed without crawling on hands and knees. I was very anxious about him, and having read

Hood's Sarsaparilla Cures

so much about Hood's Sarsaparilla, I determined to try it, and got a half-dozen bottles, four of which entirely cured him." MRS. G. A. LAKE, Oshawa, Ontario.

N. B. Be sure to get Hood's Sarsaparilla.

Hood's Pills act easily, yet promptly and efficiently, on the liver and bowels. 25c.

Grateful—Comforting.

EPPS'S COCOA

BREAKFAST—SUPPER.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of well-selected Cocoa, Mr. Epps has provided for our breakfast and supper a delicately flavored beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—Civil Service Gazette.

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus,

JAMES EPPS & CO., Ltd, Homœopathic Chemists, London England.

The Professor

of Chemistry, Toxicology, and Medical Jurisprudence, of New York City College—R. Ogden Doremus, M.D., LL.D.—highly recommends Adams' Tutti Frutti for indigestion.

See that no imitations are palmed off on you.

50 CENTS A BOTTLE. SIX BOTTLES, $2.50.
MANUFACTURED ONLY BY THE
HAWKER MEDICINE COMPANY, LIMITED,
ST. JOHN, N. B.

Dairymen, Attention

Of the Cheese and Butter Factories in operation in 1894, we furnished, to the satisfaction of all concerned, the necessary apparatus for the following:—Winsloe, Hampton, Tryon, Crapaud, Grand River, Dunk River, Mount Stewart, and Vernon River Bridge.

In the summer of 1894 we made nine Cheese Vats (each holding from 650 to 700 gallons of milk), and two Butter Vats (each averaging 400 gallons of milk); no complaints were made—satisfaction given.

From our large experience in the past we are now better than ever prepared to meet the wants of Dairymen. We guarantee satisfaction, and respectfully solicit the patronage of those who are contemplating the erection of Cheese or Butter Ftories.

Our make of Vats is superior to all others, and our fifteen and twenty gallon Cans are the best and cheapest in the province.

Terms to suit puchasers.

M. STEVENSON
