THE YOUNG MAN'S LIFE WORK.

What He Does Not Do Heartily He Never Quite Does.

"Any man is unfortunate who devotes himself to an occupation that is vetoed by his own tastes and preferences," writes the Rev. Charles H. Parkhurst, D.D., discussing "Selecting a Career," in a paper addressed to young men in August Ladies' Home Journal. "The Scriptural injunction, 'Whatsoever ye do do it heartily,' is one to be respected quite independently of the moral consideration that was weighed by Saint Paul when he wrote it. What a man does not do heartily he never quite does, which is to say, what a man does not do with his heart he never quite does. There are touches of excellence to which an effort does not attain except as it is the outcome of a certain amount of enthusiasm. Work is doing a thing because we have to. Play is doing a thing because we like to; and there is a great deal more of one's true self in what he does because he likes to. Only a part, and that the dryest part of any workman is enlisted till his endeavors emanate from a spot deeper down than the level at which he keeps his intelligence and his skill, and begin to flow out from the fresher and juicier regions of the heart. So that in settling this question of a vocation it is a matter of prime importance for a young man to decide what that particular business or profession is into which he can go without a remainder, into which he can throw himself in unreserved investment."

A Novel Revenge.

Two young men of Boston, formerly fast friends, recently had a falling out. Indeed, the offence of the offender was so serious that the affronted one determined upon a means of revenge as unique as it was deadly. Knowing that his new made enemy was largely occupied in the avoidance of creditors, he at once inaugurated a subtle system of conveying information to the creditors as to where his victim could be found. The result was as expected, but the retribution came promptly in the shape of similar information conveyed from an obvious quarter to his own numerous baffled creditors. The results are interesting. Each man is now put to his wits' ends to meet or avoid embarrassing demands, and it cannot yet be determined as to which is getting the better of the fray.—Boston Traveler.

He will take no Risks.

Shrewdness of a wellknown City Merchant.

HE KNEW WHAT WAS GOOD FOR HIM.

In winter when Canadians spend a large portion of their time indoors and cannot have the same variety of fresh food as in summer and fall, indigestion and dyspepsia afflict a majority. "If anybody will tell me that dyspepsia in its advanced stages is perfectly curable," said a Toronto merchant, "I will take his word. Personally I run no risks. As soon as I feel a sense of weight in the stomach, after a meal, I know that my blood is sluggish in circulation. In my business I cannot take much exercise, and I fight the first sign of stomach troubles with Scott's Sarsaparilla. It has never failed me, and has saved me many a doctor's bill."

Scott's Sarsaparilla possesses medicinal properties superior to all other so-called sarsaparillas made. As a remedy for indigestion, rheumatism, pimples, scrofula and all blood diseases, physicians state that its equal was never known. Sold at $1 per bottle, of all dealers.

ABSOLUTELY PURE

WAR'S HUMORS.

A Few Good Stories Retold of Great Commanders.

Once during the Iron Duke's campaign in the Pyrenees, it happened that General Picton's dispositions for receiving the assault of Marshal Soult displeased him. The danger threatened from in front, and the difficulty lay in delaying the attack until Wellington could effect the change he wished. He was, as usual, equal to the occasion. Waving his hat in the air, he galloped to the front of a regiment as if he meant to order a charge. The whole of Picton's line cheered tremendously, and as the roar died away, Wellington was heard to remark, half to himself: "Soult is a cautious commander and will not attack in force without ascertaining the meaning of these cheers. That will leave time for the sixth division to come up, and we shall beat him." This was exactly what happened, and Soult sustained a bloody repulse where he might have won an easy victory.

When Grant's army crossed the Rappahannock, Lee's veterans felt sure of sending it back as "tattered and torn" as ever it had been under the new general's numerous predecessors. After the crossing, the first prisoners caught by Mosby were asked many questions by curious Confederates. "What has become of your pontoon train?" said one such inquirer. "We haven't got any," answered the prisoner. "How do you expect to get over the river when you go back?" "Oh," said the Yankee, "we are not going back. Grant says that all the men he sends back can cross on a log."

Turenne, one day, observing that at each volley from a certain battery some of his soldiers ducked their heads, but drew themselves up again immediately, lest they should be reprimanded, exclaimed: "My children, there is no harm in what you do; such visitors well deserve an obeisance." This reminds one of the French officer's politeness when he saw a bomb approaching. Leaping aside as it approached, he took off his hat and bowing low remarked: "I never dispute precedence with gentlemen of your family."

During the battle of Lexington the bullets flew thick and fast. A ball struck General Sterling Price's saddle, shattering it and turning the occupant half way round in his seat. His son, who was near by, came up in haste and cried out, "Father, are you hurt?" "General Price, if you please, sir!" Then, after a minute's pause, "General Price can assure Colonel Price that he is unharmed."

MOUNTAINS IN MOTION.

LANDSLIDES OF ROCK AND EARTH THAT CARRY DESTRUCTION.

Historic Calamities That Have Been Caused by Heavy Rains—Awful Destruction to Life and Property—The 1894 Slide at St. Albans, Quebec.

The landslide reported lately from Charlevoix county, Quebec, which resulted in the destruction of ten houses and the loss of many lives, has numerous counterparts in mountain countries through whose valleys flow extensive water courses. The present season has been especially prolific of them, because of the enormous rainfalls.

What the avalanche is to the snowy Alps of Switzerland and the white peaked mountain districts of Alaska, so is the landslide to the rocky and wooded slopes of hill countries in more temperate latitudes. It is a question which of the two, the alvalanche or the landslide is the more terrible engine of destruction. The avalanche is by far the more awful, and would be infinitely more destructive were it not confined to countries frequented by few but venturesome travelers.

Landslides, on the contrary, may occur in any place where valleys lie below steep hills. Their coming may not be predicted. Without warning, in the twinkling of an eye, the mountain's skin of rock and earth moves from its resting place, crawls slowly at first down the steep slope and then gathering momentum plunges into the valley below, carrying death and destruction with its fall.

How They Are Caused.

The cause of landslides is nearly always the same. In all rocky countries the soil is only a skin or covering for the solid rocks of the mountain's core. It lies upon the slopes rarely more than twelve or fifteen feet thick, often sharply inclined and clinging to its rocky foundation chiefly by its own weight.

In seasons when there are violent and long continued rains the water soaks the soil to the bottom, and lubricates the rocky surface underneath with ooze and mud. If then the slope be steep enough it often follows that the skin of earth slides downward of its own enormous weight, and gathering momentum, becomes a mighty avalanche before which great trees are broken like straws.

It is very rarely indeed that a landslide occurs during any but protracted spells of wet weather, and in such exceptional cases some readily discovered local causes, such as unwise excavations, can always be found.

The tremendous rainfalls of this spring were the cause of that other Canadian landslide which occurred at St. Albans, on the banks of the St. Anne river, on April 28. This was the most terrible landslide that has ever taken place in Canada, and has few parallels on the continent.

The circumstances attending this catastrophe were these: The St. Anne river three miles from St. Albans makes a long curve to a waterfall one hundred and fifty feet in height. The mountain descended precipitously to the cliffs over whose rim the river poured. The river is the outlet of the entire watershed of the Laurentian mountains, and this spring it was swollen to such abnormal proportions that vague fears of some catastrophe were felt. But no one predicted the awful catastrophe that followed.

A Terrific Slide.

The country about St. Albans was well settled with lumbermen. There were perhaps 4,000 persons in the neighborhood. Below the falls was a fertile valley, with pulp mills and farms.

The first crash occurred in the early morning and aroused the inhabitants from their beds with a noise like distant thunder. It was found that there had been a slide of the earth which stayed the rocky foundations of the falls. Many thousands of tons of rocks and earth rushed down into the valley, burying several mills and houses. Three or four persons were caught in the fall.

During the next hour there was the most intense excitement. It was realized that this was but the beginning, and thousands fled, leaving their homes and their stock. They left none too soon. Three hours after the first fall the side of the mountain began to slide down upon the doomed falls. At first the movement was gradual. Soil and rocks and trees, covering vast areas of mountain side, all unchanged in their relative positions, bore slowly down upon the river.

Then the movement was accelerated. There was an awful roar. Down came the gigantic landslide, while the mountain trembled.

It struck the valley just above the falls and wiped the falls out of existence. It carried away the entire cliff over which the St. Anne poured its muddy torrent. It swept into the lower valley.

Resistlessly the mountain side plunged down the valley, obliterating the farms, the homes, the river itself. It did not stop until six miles of territory had been utterly devastated.

Changed the Township Map.

When all had settled and there was opportunity to study the results of this appalling landslide it was seen that a new map would have to be made of the township. There was nothing left as it had been before. The falls were gone completely, and the river had found a new channel three miles away. Tracts of woodland a quarter mile or more square had been moved four or five hundred yards, the trees remaining standing. Other large tracts had been literally ploughed up, and the timber ground to atoms.

In place of the great pool at the foot of the falls was now found a field. Beyond it the former channel of the river was filled with huge masses of rock. No one knowing the country as it had been could possibly have found a single familiar feature throughout a space of six square miles. Many acres of woodland disappeared altogether.

The damage, of course, was frightful. The town escaped, but seven farmhouses, with their stables and buildings, were wiped out of existence, and a number of mills of various sorts disappeared also.

About a dozen persons were killed, in spite of the three hours' warning. Great herds of cattle were buried. Thousands of domestic animals, floating down the river and into the St. Lawrence, brought the first news of the disaster to the cities below. Booms and wharves were carried away where the river joins the St. Lawrence, and caused a loss there of $75,000.

The damage to the lumbering interwell have belonged to the fat woman in the side show of a country circus. Then he examined the foot critically.

"Ah, ha," he half muttered to himself. "So you blame her for having big feet? It's all your fault. The idea of keeping a girl of her age in spring-heel boots! You've simply ruined the shape of her foot forever, but perhaps if you have the right shaped boot made for her it will build her foot a little. By actual measurement her foot is 11¼ inches long and 3¾ inches on the ball, and perfectly flat."

"Stand up, young woman. See, you have destroyed the last vestige of the arch of your instep. Now I will have you a boot made with a heel and a sole that fits well up under the instep, and you will find it much more comfortable."

"Did you ever see such a foot on a girl?" asked the mother, with a ring of despair in her voice.

"Dear me, yes. Her foot is not an uncommon one nowadays. She takes a No. 9½ C last. Of course it is longer than the average, but it isn't much wider. The vanity of mothers in wanting their children to appear young is visited on the children, and it is nothing uncommon for girls from 15 to 20 to call for Nos. 4s, 5s, 6s, or 7s.

"That's not the worst of it. Women's feet, as well as those of young girls, are growing larger. Now, the women deny this, and say that it is their heads that are growing larger, and that they shoe themselves more comfortably and sensibly than they ever did before. There is a great deal in this, too, but still the tendency of women to physical culture and athletics has increased the size of their feet. The college women who jump hurdles, run races, do pole vaulting, play basket ball and tennis, and exercise an hour or two a day on the field or in the gymnasium, one way or another, all wear shoes with no heels, or very low ones. Of course their feet spread out and develop, and I know of nothing that increases the size of the foot like playing golf. I can name a dozen women whose feet have become two inches broader and longer since they became so enamoured with golfing two or three years ago. Bicycling also makes the foot spread some, but perhaps not so much. It is natural for the fore part of the foot to spread when the entire weight is thrown on the ball, as it is when pedaling over car tracks or up grades."

"What is the proper way to shoe one's self in order to preserve the natural beauty of the foot?" asked the customer.

"As I said before, as soon as a child's foot begins to develop into that of a woman make her discard shoes with no heels. Let her wear a shoe—and this applies to women too—which fits well up under the arch of the instep, because then the weight of the body is distributed evenly in three parts instead of two. One falls on the heel of the shoe, another on the shank, and the third on the ball. Heels should be not higher than an inch or an inch and a quarter, and as for these exceedingly pointed shoes, why they would have deformed the foot of Venus herself. Avoid pointed toes and wear those that are rounded, taking care to give plenty of room to the web of the foot, and favor an extra broad sole on the outside of the shoe. The woman who wears a shoe that is the least bit too short does her foot irreparable injury. Short shoes enlarge the joints, and once the ball of the big toe leaves the socket of the foot and becomes hardened there is no getting it back. Chiropodists claim to cure enlarged joints, but they can't do it. How can they? The socket fills up with cartilage and the ball can't get back. There is no room for it, and so out it sticks, looking uglier than sin and causing women more physical and mental pain than almost any other ailment. —New York Sun.

THE ONLY True Blood Purifier prominently in the public eye today is Hood's Sarsaparilla. Therefore get Hood's and ONLY HOOD'S.

Bank

President Isaac Lewis of Sabina, Ohio, is highly respected all through that section. He has lived in Clinton Co. 75 years, and has been president of the Sabina Bank 20 years. He gladly testifies to the merit of Hood's Sarsaparilla, and what he says is worthy attention. All brain workers find Hood's Sarsaparilla peculiarly adapted to their needs. It makes pure, rich, red blood, and from this comes nerve, mental, bodily and digestive strength.

"I am glad to say that Hood's Sarsaparilla is a very good medicine, especially as a blood purifier. It has done me good many times. For several years I suffered greatly with pains of

Neuralgia

in one eye and about my temples, especially at night when I had been having a hard day of physical and mental labor. I took many remedies, but found help only in Hood's Sarsaparilla which cured me of rheumatism, neuralgia and headache. Hood's Sarsaparilla has proved itself a true friend. I also take Hood's Pills to keep my bowels regular, and like the pills very much." ISAAC LEWIS, Sabina, Ohio.

Hood's Sarsaparilla

Is the One True Blood Purifier. All druggists. $1. Prepared only by C. I. Hood & Co., Lowell, Mass.

Hood's Pills are purely vegetable, carefully prepared. 25 cents.
