OYSTERS GROWING IN ALASKA.

Experts Pronounce Them of Superior Quality and Like Those of the East.

For some time past it has been rumored in California that large beds of oysters and some oysters since been discovered in certain waters in Alaska.

The location has not been stated, but it has been understood that the oysters were entirely different from any found hitherto on the coast, being much larger and as fine, or almost as fine, as the best Eastern oysters.

News is now received from Washington that the oyster are in the vicinity of Killisnook. This special information under a Washington date was received yesterday, and is as follows:

United States Fish Commissioner McDonald has obtained the consent of the Treasury Department to avail himself of the services of Special Agent Max Felt, having in view the investigation of certain oyster beds said to exist in the vicinity of Killisnook, Alaska.

Specimens shells from this locality, obtained from natives in the vicinity of the Alaska Oil and Guano Company, were submitted to the ichthyologist of the Commission during the recent visit of the special agent.

These shells, with instructions to secure and pack some oysters for transportation to the Commissioner. If it report of the ichthyologist is favorable, shells will be taken to secure and young oysters for the purpose of transplanting to the waters of Chesapeake Bay.

Hitherto it has been supposed that the waters of Alaska were too cold for oysters, but old residents of Alaska now report that this is an error.

They say that the Japan current strikes and influences greatly a portion of the coast of that great country, and that oysters can be raised there in the same manner as elsewhere in the world.

The California and Shovelwater Bay Oysters are of the same size, shape, and small and sweet. By many Californians they are preferred to the Eastern product.

The newly discovered oysters of Alaska are as large as those of the East, are said to have much the same flavor as the California oysters.—San Francisco Examiner.

A Blue-Grass.

I was in Frankfort the other day and saw a sight which was enough to make the blood of a Kentuckian dance like champagne, and his eyes sparkle like the moonbeams. It takes a combination to produce such a thing, and I was fortunate in the blending in this case was most harmonious—a lissome young man, as graceful as a sapling maple, mounted on a black stallion of Kentucky blood, with limbs as keen and swift as the "black tail" of the boundless prairie of the West.

She came down one of the shady avenues of elm and water maples, that are called streets at Kentucky's capital, at a clipping pace, and as we neared the moonbeams, it takes a combination to produce such a thing, and I was fortunate in the blending in this case was most harmonious—a lissome young man, as graceful as a sapling maple, mounted on a black stallion of Kentucky blood, with limbs as keen and swift as the "black tail" of the boundless prairie of the West.
