A message to Canadian Motorists about our new 88 and 98 Gasoline

TWO NEW HIGHER OCTANE GASOLINES HAVE BEEN PERFECTED FOR CANADIAN USE. 40 YEARS OF CONTINUOUS RESEARCH AND DEVELOPMENT HAVE RESULTED IN THIS GASOLINE ACHIEVEMENT.

B-A has added the most modern process equipment available to their refineries. And with this new equipment in operation, B-A can now supply Canadian motorists with new B-A 88 gasoline—excellent performance with economy... and new B-A 98 gasoline—peak performance in any car.

The difference between B-A's new gasolines and other gasolines is in the refining. A completely new modern refining technique is being employed. B-A has found a way to tailor-make the new B-A 88 and 98 gasolines so that the octane numbers of all the different fractions are relatively close.

So the new gasolines at your B-A service station are "high-jump" gasolines... gasolines that give better acceleration over a wider range of speeds. Better performance over the entire speed range. The new gasolines have balanced volatility. They vaporize readily to give dependable acceleration, more "get up and go." And the new gasolines give you cleaner combustion. They reduce lubricating oil consumption. Give you lower maintenance costs. Prolong your valve, ring and spark plug life. Give you worthwhile gasoline savings and greater economy.

The new gasolines, because of their more uniform octane number, eliminate engine roughness. They give you knock-free power and smoother performance.

Yes, there's a new experience awaiting you at your B-A service station. Drive in today and fill up with new B-A 88 or 98 gasoline. You'll get more power and better performance than ever before. At the sign of the big B-A!
