

5 Good Reasons Why You Should Buy Enterprise

- FIRST** — Enterprise Ranges are Built Better to Last Longer by a manufacturer with over fifty years experience in fine range design and construction.
- SECOND** — "Great Strength" . . . no twist with an Enterprise. The Anchor Tie-up Construction makes it impossible.
- THIRD** — "Quick Heat" . . . Speedheat Steamlined Flues gives quicker morning fires and more heat at all times.
- FOURTH** — "Speedy Cooking" . . . The Intensifire Ring on the bottom of every Enterprise cover speeds up cooking.
- FIFTH** — "Magisook Oven" . . . Clean, bright and well ventilated. A joy to see and use.

The New Enterprise 'IRON DUKE'

Sturdy Cast Iron. The Island's most popular range and one that will give a life time of cooking and baking satisfaction.

America Papers Pay Tribute

NEW YORK, Sept. 4.—(C.P.)—United States newspapers today generally mingled condemnation of Chancellor Hitler with declarations that the United States must stay out of the war that resulted from Germany's invasion of Poland.

"There has rarely in all history been a case easier to judge," said the New York Post (Democrat). "One man has unnecessarily led the world to war. The guilt lies upon Adolf Hitler."

The Post called upon Americans to support President Roosevelt in his efforts to achieve "a final peace which will eliminate the continued use of force between nations."

The afternoon papers did not comment upon the German action in sinking the British liner Athenia but gave news accounts of opening of submarine warfare featured places on their front pages.

The New York Sun (Republican) paid tribute to the "fortitude and calm resolution" with which France and Great Britain "today lead their sons to war." It said the western democracies had through their patient efforts to avoid war "made it certain that . . . there cannot be . . . intelligent doubt where responsibility for it belonged."

BREEDING AND BROODINESS

(Experimental Farms News)

During the past twenty or thirty years, the broody hen has gradually lost its importance as a hatching and rearing medium, due to the advent of commercial hatcheries and reliable brooders, states D. G. Denny, Dominion Experimental Station, Summerside, B. C. Induced by the change in method for replenishing annually the flock of laying birds the considerable tendency toward broodiness normally exhibited by the popular American breeds of poultry such as Barred Rock, Rhode Island Red, and White Wyandotte had to be reduced by brooding in order that they might become as free from this characteristic as were the Leghorns.

While, at first, it was doubted whether much damage could be wrought about by breeding, it is now recognized that constant selection of non-broody and less intense broody lines has so eliminated this liability in some flocks of heavy breeds that they now compare favourably with the Leghorns, both for egg production and lack of broodiness.

In developing the flock of White Wyandottes at the Summerside Experimental Station it has been part of the policy to include in the brooding pens no hen that went broody on more than two occasions during its pullet laying-year. All males used for breeding purposes have been bred from non-broody stock. This system has proved so useful that, whereas in the year 1922-23 90 per cent of the flock of pullets went broody at least once, in 1927-28 selective breeding had reduced this to 11.5 per cent of the pullet flock. Birds exhibiting broodiness more than twice in their pullet year had been reduced from 36 per cent to 5 per cent in the same period.

It has been found that egg production of the flock has increased by a little over 70 eggs a bird since 1922-23, and, while other aspects of selective breeding are in some measure accountable for this difference, there is no doubt that the reduction of broodiness by breeding has been a major influence.

There was an approximate differ-

ence of 7 eggs per bird last year between the average number of eggs laid by the non-broody and the broody pullets.

It may be argued that it is easy to eliminate broodiness from flocks that are trap-nested regularly, and that it is more difficult to control it in the ordinary poultryman's flock. In actual fact, however, the desired result can be secured by the simple procedure of placing a celluloid leg band on the pullet's leg each time it goes broody. It is then an easy matter to cull from the brooding pens all hens carrying any, or more than two bands, depending upon where the culling line is to be drawn. In any case, the use of breeding males from non-broody lines is advisable if a rapid advance is to be made. The small amount of labour involved will be well repaid.

An Englishman has invented screws for use in upholstery on the heads of which colored plastic caps can be fastened to harmonize with fabrics or trimmings.

Will Manufacture War Material On Large Scale

(By The Canadian Press)

Important contribution to the cause of the warring democracies will likely be made by Canada in supplying them with material. Eastern Canada, highly industrialized, is the home of many manufacturing concerns which can be turned to the production of munitions and war equipment.

For the past three years the National Defence Department has been making a survey of Canadian industry with just that thought in mind. More than 2,000 plants have been examined by departmental officers. All particulars relating to their equipment, personnel, capacity and possibilities for expansion are filed with the department.

At present 14 plants, in the Dominion are turning out aircraft and parts, most of them working on orders for both the Canadian and British governments.

The making of jigs and dies, the drafting of blueprints and the general preliminary work entailed before an aircraft plant can get into production on any particular type of machine involve considerable time.

Planes and Munitions

The industry in Canada is now over this hump, however, and preliminary labors completed, the producers are able to turn out airplanes at a fast rate. Due to the variety of the machines, however, and other elements entering into their construction, it would be hard to reduce production capacity to any formula of so many a month.

Canada has no munitions as such. Shells up to 4.5 inch calibre are made in this country. A Montreal firm is working on an order for both 18-pounder and 4.5 inch shells. These could also be made at the Lindsay arsenal, where preparations are well advanced for work to begin some time this fall.

Other Canadian steel plants could also produce not only those calibres but even the larger ones, up to the 15-inch. They did so during the Great War, and can turn to that work again.

Guns are not made in this country. A long time would have to elapse before any Canadian plant could be put into shape for that purpose. Similarly Lee-Enfield rifles, with which Canadian troops are equipped, are not manufactured here.

Bren Gun Contract

A requirement of the Bren gun contract with John Inglis Co. of Toronto, was that the plant be equipped to turn out not only Bren machine guns but Lee-Enfield rifles also. Cartridges for these weapons are made at the Dominion arsenal at Quebec. The Ross Rifle factory at Quebec has been leased, and much of its machinery installed in the plant of John Inglis Co.

There are several Canadian industries which could produce armored fighting vehicles. To convert their plants for this purpose,

BRADALBANE AND VICINITY.—Mr. Allister MacDonald, teacher at Bradabane Village School, spent the week-end at his home in Murray River. A very successful service was held in Bradabane United Church, Friday evening with Rev. J. A. MacDonald missionary from Trinidad as guest speaker. Assisting in the service was the "String-Trio" consisting of the Misses MacKay, of Charlottetown and Mrs. (Rev.) Milley, Miss Margaret MacKay of Bradabane is enjoying a pleasant vacation visiting friends and relatives in Rhode Island and Massachusetts. Miss Luella Todd has returned home after spending a very enjoyable visit in Ottawa, the guest of her sister Mrs. Guy Ramsden. Miss Hazel Woodside and Miss Vera Ward, spent the past week-end in Charlottetown. Mr. Jack Hickox Bradabane left last Monday morning on an extended visit to Cambridge, Mass.

MISCELLANEOUS SHOWER.—On Tuesday evening Aug. 29th the people of Springton and vicinity gathered at the home of Mr. and Mrs. Herbert McKinnon to tender a farewell party to Miss Margaret MacKay of Bradabane, who is leaving for a vacation in Rhode Island and Massachusetts. The party was most enjoyable and was presided over by Mr. and Mrs. Herbert McKinnon. The evening was spent in a most enjoyable manner and the guests were entertained by a most excellent band. The party was a great success and the guests were most entertained.

OUT OUR WAY — By J. R. Williams

A miscellaneous shower to a newly married couple Mr. and Mrs. John Gillispie (nee Lillian McKinnon), after the bride and groom were escorted to their seats of honor by Dorothy Gillispie and James McKinnon they were presented with lovely gifts which were opened by Dorothy Gillispie and Mrs. P. Martin and the accompanying verses read by Velma Martin, Mrs. L. Silliphant Jr. neatly arranged the gifts on the table. Mr. Gillispie on behalf of himself and his bride thanked the people for their kindness and extended a cordial invitation to all to visit them. Every one joined in singing "For They are Jolly Good Fellows" after which the bride and groom were honored. Lunch was served by the ladies and the remainder of the evening spent in dancing and social intercourse. (Patriot Please Copy)

WHY MOTHERS GET GRAY

WHAT AM I DOING? WHY, I'M COOKIN' SOME MUSHROOMS I FOUND GROWIN' OUT IN TH' BACK YARD!

THROW THEM IN THAT GARBAGE PAIL, I'M NOT GOING TO HAVE ANOTHER DOCTOR BILL IN THIS HOUSE — YOUR FATHER COOKED MUSHROOMS ONCE AND THEY TURNED OUT TO BE TOADSTOOLS!
