

We recommend

MAR-NOT FLOOR ENAMEL

made by **SHERWIN-WILLIAMS**
the super-quality floor enamel

It beautifies a variety of floorings... wood, cement floors, linoleum. You can buy it in nine fetching colours... embracing such popular tones as Dutch Blue and Light Orange. The range of colours includes a wide variety of interior decorative schemes, as a glance at our MAR-NOT colour chart will show you.

And MAR-NOT has qualities of wear never before realized. Scrubbing, tramping, the severest usage... it happily survives them all, and continues to offer a smooth, beautiful finish.

It's sound common-sense to go over your floors with MAR-NOT Floor Enamel. Come to Paint Headquarters and be wise!

HOLMAN'S CHARLOTTETOWN

Presbyterians To Honor Missionary

(Continued from Page 3)

pendence offensive to the old land, a different personage, met with a similar result. Nothing daunted by these rebuffs, the Doctor turned to the country of his adoption to survey the prospects of the weaker sex. He had heard much of a Miss Anna MacGregor of Halifax, a niece of two members of his own congregation. A letter was sent by special messenger, the proposal was accepted, and seed time in 1796 was arranged for the marriage. All went well. They were wed at Halifax at the appointed time and soon afterwards entered a new home built with the assistance of the congregation on East River. It was the first frame house built in the County, but unfortunately difficulties arose over the title of the land and the Doctor was obliged to move and build again. This time the construction was of brick, and was the first of its kind in all Eastern Nova Scotia.

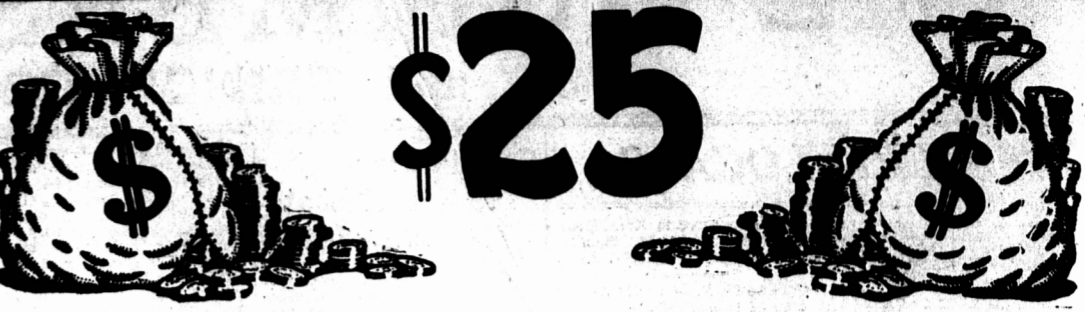

Mrs. MacGregor proved to be a woman of lively spirit, active habits and prudent and economical in her management. Her death fourteen years afterwards he regarded as the great trial of his life. He married again, the widow of Rev. Gordon, one of the ministers sent out after Mr. Ross and Mr. Brown.

In his brick house at the closing day of the election of 1799 he entertained the candidates with a fire of coal, gathered from an outcropping seam on his farm. Known as the MacGregor, this seam is still being worked. Nothing was done to develop the finding of coal until in 1827 the General Mining Association, holding a mineral and mining lease in the Province, began work on the East River. The spot they chose was near the Doctor's house, and not long afterwards Dr. MacGregor sold his property to the Company. He moved to the east side of the river and on a hill opposite the old one built another brick dwelling, larger and better than the former.

Much could be written on the part Dr. MacGregor played in the founding of Pictou Academy and his fame as a Gaelic scholar and poet. Too much could not be written of his goodness. To the end he continued his studies and preaching, and on March 3rd, 1830, entered into his Eternal Reward.

In Dr. MacGregor's first marriage there was born, Christine Ann, from whom His Honor Judge George Patterson is directly descended; James, of whose lineage are Reuben and George MacGregor New Glasgow; Roderick, Jessie Sarah and Robert from whom descended the Misses Charlotte and Helen MacGregor, New Glasgow and, in the second marriage Annabel, Peter, of whom Rev. MacGregor Grant is a direct descendant, and Mary. The second son, Roderick, was the father of Ann, Mrs. Jeffrey MacCoul, New Glasgow; James D., father of the late Hon. R. M. MacGregor, and Mrs. Harold Oxley, Halifax, and grandfather of Drummond MacGregor, Mrs. L. M. Rhodenizer and Miss Janet MacGregor, New Glasgow; Miss Margaret who died here; Christina, wife of the Rev. Thomas Sedgwick, D. D., of Tatamagouche; Peter A. father of Roderick, William, and Miss Jean MacGregor, New Glasgow, and Mrs. Douglas Findlay, Carleton Place, Ont.; and Miss Laura MacGregor, New Glasgow, in her eighty-sixth year. Altogether there are approximately two hundred and eighty direct descendants of the pioneer missionary.

The prominence of Dr. MacGregor's descendants is, for an article of this type beyond scope. The new land owes them much. Here in Pictou County they are best known, for here their greatest efforts have been put forth. With them the populace unites in honoring a man whose influence has been felt through one hundred and fifty years of history. What they have in store is unknown. Be it may, the MacGregors go on.

\$25 IN CASH

As Extra Prizes in the GUARDIAN SUBSCRIPTION CAMPAIGN

THE \$25.00 WILL BE DIVIDED AS FOLLOWS: \$10.00 WILL BE AWARDED THE CONTESTANT TURNING IN THE GREATEST AMOUNT OF SUBSCRIPTION BUSINESS THIS WEEK AND NEXT WEEK ENDING AUGUST 1st—\$7.00 WILL BE GIVEN TO THE SECOND HIGHEST AND TO THE NEXT FOUR \$2.00 WILL BE AWARDED TO EACH.

The Late Blight Disease Of Potatoes

Late blight is the most destructive disease of potatoes. It attacks the leaves, and, if weather conditions are favourable, quickly kills the plants, besides causing a serious tuber rot. Meteorological records summarized at the Laboratory of Plant Pathology, Charlottetown indicate a close relationship between weather and outbreaks of blight. Weather conditions during the past few weeks have been favourable to blight development so that we can be reasonably sure that it will become widespread and serious this season. If so, it is certain that very heavy losses will result unless the necessary precautionary measures are carried out promptly and with care.

This destructive disease appears in almost any potato field during late August or early September and is recognized by the appearance of purplish black water-soaked spots on the leaves. In wet weather a fine grey mildew covers these areas on the under surface of the leaf. In reality this growth is made up of many branches bearing countless numbers of spores which are the seeds or fruiting bodies of a mould which feeds inside of the leaf. This parasite is the late blight fungus and the affected area on the leaf is late blight. The spores, of course, spread the disease. On the tubers it appears as purplish to dark brown areas of dry rot which become very destructive in storage.

Late blight may be controlled by spraying with Bordeaux mixture, making the applications at least five times for Irish Cobblers and six to eight times for Green Mountains, beginning when the plants are about six to eight inches high. The later applications are very important. The spray mixture generally recommended is composed of 4 pounds of lime and 40 gallons of water.

Lime may be of the hydrated form and should be of the best grade procurable. Stone lime is most satisfactory and should be thoroughly slaked. The most economical method is to prepare a stock solution of the bluestone and the lime in suitable containers. Casks of 40 gallon capacity are convenient for this purpose. In the first cask place about 30 gallons of water, and dissolve in it 40 pounds of bluestone by suspending the chemical in a sack just below the surface of the water. When this is dissolved add sufficient water to make up to 40 gallons. In the second cask place 40 pounds of the best stone lime and slake it by adding water very gradually. When the process is complete add sufficient water to make up 40 gallons. These casks will now contain 1 pound of bluestone and lime respectively, per gallon. The casks should be covered to prevent evaporation and to exclude dirt or other substances which may interfere with proper application of the spray mixture. To prepare the mixture for spraying, first determine the capacity of the spray tank. Assuming this to be 20 gallons, pour into the tank 24 gallons of water and add 8 gallons of the thoroughly stirred bluestone solution (8 pounds of bluestone and then pour in 8 gallons of the well stirred milk of lime (8 pounds of lime). The lime solution should be strained through cheesecloth or other suitable material or the strainer provided with the sprayer. The stock solutions of bluestone and lime should never be mixed before further diluting with water.

IN MEMORIAM

MR. RODERICK KEENAN

The death occurred at his home at Murray River, at 3 a.m. last Sunday of Roderick Keenan, aged 66. He had been in failing health for the past two or three years. Mr. Keenan had been postmaster for 40 years and was highly respected and esteemed.

His wife predeceased him some years ago. He leaves to mourn six sons, William, Harold and Lester in Murray River; Percy in the Department of Highways, Ottawa; Lorne of the Canadian Bank of Commerce, Newfoundland; and Ray in Charlottetown; also two daughters, Mrs. Marritt Forsythe and Mrs. Lloyd Proude of Charlottetown.

Two brothers, David Keenan of Wood Islands, and William Keenan of Boston, also survive.

The funeral was held at four p.m. last Sunday at Murray River, Rev. C. E. Armstrong officiating. Mr. Keenan was a prominent Mason, and the ritual of the order was performed at his burial by Mr. Laughlin MacKinnon of Montague.
