

Is Now a Healthy Boy

"From a puny, delicate child, my little Johnny has become a strong sturdy boy."

One mother writes:—"If you had seen my little Johnny four months ago and you were to see him to-day, you would never believe that he is the same boy. Then he weighed only 49 pounds. To-day he weighs 90 pounds, almost double what he weighed four months ago. His trouble first started with a cold, which we never noticed because he was strong and like all boys of his age occasionally caught cold. After a while we began to notice that his cough, instead of getting better, was getting worse, that he was looking pale and losing weight. He seemed to be tired all the time, had no energy to do anything. Before he caught this cold he had no trouble with his lessons and remained at the head of his class without much study. But we began to notice a change. He didn't seem to care whether he knew his lessons or not and nothing seemed to interest him. He coughed so much and so hard at times that his face would become purple and we thought he would surely burst a blood vessel. Medicines and cough mixtures didn't do him any good. Finally, in desperation and as a last resort, we tried Carnol. In a short time his cough had almost disappeared. His appetite was returning and he was beginning to take an interest in his studies. And, thanks to Carnol, he has become a strong and healthy as he has ever been."

Carnol is sold by your druggist and if you can conscientiously say, after you have tried it, that it hasn't done you any good, return the empty bottle and he will refund your money. 1-122 For Sale by HUGHES DRUG CO. LTD.

J. E. McLURG.

Chairman, 1922-23, Maritime Division, Canadian Manufacturers' Association.

Mr. McLurg, who is well known in the Maritime Provinces, is general manager of Halifax Shipyards, Limited. Born near St. Mary's, Ontario, he worked for several Ontario companies and was with the Lake Superior Corporation when war broke out. He had a distinguished career at the front and on his return was appointed to his present position, where he has done most effective work for the Canadian shipbuilding industry. Under the constitution of the Canadian Manufacturers' Association, which gives a large measure of local autonomy to manufacturers in different sections of Canada, Mr. McLurg is head of the organization in the Maritime Provinces.

NOTICE

TO LOBSTER FISHERMEN AND LOBSTER PACKERS

The lobster fishing season closes in Gulf Division Sunday, June 25th. There will be no extension of fishing season. But fishermen may take ashore catches on Monday, June 26th, and canneries may also clear up on that date.

S. J. GALLANT, Inspector Fisheries.

Spraymotor

Machinery will give you service in spraying trees or crops. They are built of material to resist acids and with ample pressure for economical use of your spray material.

IN MEMORIAM

MRS. JOSEPH GOULD.

Many friends of Mrs. Mary Gould wish to learn of her death which occurred at 9 o'clock on Thursday night in the General Public Hospital. She passed away suddenly, though she had been ill for nine months. Mrs. Gould was sixty-four years old and a native of P. E. Island. She is survived by her husband, three sons, Patrick of Montreal, Alexander of Chatham and George of Woodland, Me., and by three daughters, Misses Margaret, Rose and Lida. They will have the sympathy of many in their bereavement. The funeral took place from 50 Waterloo street on Saturday afternoon. Interment was made in the new Catholic cemetery—St. John the Baptist.

FLOWERS GROWN IN VEGETABLE GARDEN

Many people when selecting garden seeds each spring, include a few packets of flower seeds, and why not have a border of flowers around the vegetable garden rather than a border of weeds? Not only does this improve the looks of a garden, but it also provides a source of very attractive garden last summer had a border of primroses, and just inside these a row of perennials, with vegetables in the centre, another had a petunia bed in the centre.

PLAN AHEAD FOR CANNING

When planning and planting the home garden, plenty of seed should be sown to provide a surplus of certain kinds of vegetables for canning. Crisp young radishes and lettuce are best eaten fresh from the garden; whereas the succulent string bean, the prolific tomato, the carrots, peas, corn or spargus, will delight the palate and enrich the diet many months after they mature in the garden, if properly put up in cans or jars and stored in pantry or cellar. It is not enough to enjoy these vegetables when they are fresh from October to June the storage cellar and the corner grocery are likely to yield only potatoes, turnips, old carrots, cabbage and onions, and the use of these vegetables is likely to prove monotonous without occasional reminders of the summer garden. It may take a little more time to plant and cultivate two rows of beans or two dozen tomato plants instead of one, but it furnishes these vegetables for winter as well as summer use. It is worth the while. The amount of each kind of vegetable to be canned depends on the preference of the household, and the garden must be planned accordingly. A family of five—mother, father and three children—or four adults—may well use 70 pounds a week of fruits and vegetables weighed fresh or uncooked. This would be the equivalent of such a combination as 8 pounds canned, 3 pounds dried and 41 pounds of fresh material. Of this allowance, half, or 35 pounds a week, may well consist of fresh or canned vegetables. Four pounds, or two quarts of canned vegetables are considered a minimum weekly allowance for the winter months.

The activity of all forms of insect pests must force greater activity on the part of every grower if there is to be protection necessary for production. It will not do to wait. From now on there should be daily visits to the field and garden to make sure that no destruction is going on and to be prepared to use means for protection at the first signs of attack.

New Yorkers

Prof. Edward Sapir, director of the anthropological division of the Victoria Museum, at Ottawa, in a lecture in New York, said: "New Yorkers are so busy they may lose the art of speech. Though a New Yorker myself, I am struck by several features of New York life. The first one is that it is very hard to talk to any one here. Surrounded by a barrier of stenographers and telephone girls, most business men have no time to sit down and be sociable. The primitive man with his simple mode of living was far better off than we are with all our modern efficiency. New Yorkers are fast losing the art of proper speech."

An Odd Cargo

One of the oldest cargoes on record was probably that carried lately by a British steamer bound for Morocco. It consisted of 2,000,000 gallons of purified drinking water for the use of the Spanish troops fighting the rebels in Morocco.

Eats Anything Now And Has Gained Weight

Miss White Declares She Has Never Found Equal of Tanlac Which Brought Her and Her Mother Complete Relief from Stomach Trouble.

"I have never found a medicine to equal Tanlac and I would like everybody to know the blessing it has been to me," said Miss Lillie White, 114 Charlotte St., St. John, N. B. "I suffered from indigestion four years and couldn't eat even the lightest foods without having terrible pains afterwards. For hours after meals I was bothered so much with gas that I was in perfect misery. My sleep never seemed to do me any good and I always woke up with a bad taste in my mouth. I had headache that almost made me scream and I got so dizzy I had to lie down to keep from falling. "But since taking Tanlac my digestion has so improved I can eat anything I want and I never have a touch of headache or dizziness now. I have gained ten pounds and feel as strong as can be. Mother has also been taking Tanlac with splendid results and we both think there's nothing like it." Tanlac is sold by all good druggists.

CHANGE CAUSED BY REPAIRS

A company of tourists were taken over the castle at Blois. "This," said the guide, "is the room in which the Duke de Guise was murdered!" "What's that?" interrupted a tourist. "When I came here two years ago I was told it was the room opposite." "Ah!" said the guide, quite calmly. "This room was undergoing repairs at that time."

BECOME POOR LAYERS.

There are too many farmers who do not appreciate the importance of feeding the growing pullets properly to make them grow well and to bring them into laying condition reasonably early. Too many farmers take for granted that if pullets start to lay in December or even January that is as early as can be expected. The facts are, however, that early laying pullets are the most profitable. All through the late summer and fall egg prices continually rise and egg production in September and October is more profitable than in March and April. Farmers would do well to have the majority of the pullets laying in October. Leghorns should commence laying when about five months old, so that they should be hatched in May and Reds, Rocks and Wyandottes should be hatched in April, since they take almost one month more to reach maturity. Not only must the chicks be hatched early enough but they must be fed very well all through the growing season.

During the summer months they should be given scratch feed, two parts wheat, one part each of corn and oats, twice daily. First thing in the morning and last thing at night. Keep dry mash before them all of the time, a good mash being made up of 300 parts by weight of bran, 100 of middlings, 100 of cornmeal, 100 of crushed oats and 100 of beef scraps. A light feeding of this mash, moistened, given at noon each day will help to bring them along. See that the pullets are separated from the cockerels and that they get plenty of green feed, fresh water daily, grit and oyster shells all of the time. Give them comfortable roosting quarters and give them as much free range as possible.—M. A. J.

MATCH LIGHTS UNDER WATER

"Have you got a match?" would seem a singular question under water, yet a Paris inventor has found a way to strike a light even there. The Scientific American, in an issue, should ask him what it is that can be lighted under water he would say that gas pressure torches are now made to burn under water. Such are in fact the oxyacetylene torches which are used for cutting up the iron plate of sunken vessels by their great heat. The great pressure of the gas prevents the water from putting out the flame, for it cannot reach the burner. But it may happen, of course that the flame would go out by accident, and the diver would be obliged to come up to the surface. With the new "match" he stays below and lights his torch. Certain metals such as potassium and others when placed under water will set up a violent reaction accompanied with heat or even flame. But other substances can be added which will aid in producing the flame, and if the proper mixture is packed into a small brass tube about the size of a cigarette and provided with a stopper all that is required when working under water is to pull out the stopper and allow the water to enter the tube, and the mixture then commences to burn, and the outgassing gas from the torch, so that we have exactly the same result as if a match had been applied above ground. A spring fixture holds the tube and also pulls it back out of the way of the torch flame when not in use.

WHY FISH MIGRATE.

A fish has got to swim. To do that he must be able to float on the water without effort using his fins only for travel. This means a nice balance in which are concerned his specific gravity and the

GREAT CLEARING AUCTION SALE of Automobiles, Waggon, Harness, etc., etc. AT THE GRAY DORT SHOWROOMS Queen Street on Friday, June 23rd, at 11 a. m. Sharp Under instructions from Mr. R. E. White, who is closing out his retail automobile business, we will sell at the above time and place all his stock of second hand cars, wagons, etc., etc., comprising cars of various makes including Gray Dort, Overland, Ford, Chevrolet and McLaughlins. Several single and double carriages, and two sets of carriage harness. Also a number of new Prest-O-Lite Batteries to fit Gray Dort, Chevrolet, Overland and McLaughlin cars. Each car will be sold under a written statement which will constitute a warranty to the purchaser. Terms on cars, half cash, balance six months on approved notes. Other goods, cash on delivery. Wait for this sale. A great opportunity to buy a high class automobile at your own price. Mr. White has sold all his interests in the firm of MacNutt & White, Ltd., and is retiring from the retail automobile business in order to devote all his time to the wholesale. The cars offered have been thoroughly overhauled and put in perfect order, and you can buy under the written statement of condition. WAIT FOR THIS SALE Cars can be seen any time and tried out by prospective buyers. BENJ CARTER & SON Auctioneers

volume of water he displaces. The bones and lean meat of a fish are slightly heavier than an equal volume of water. Thus the fishy creature, if starved to leanness, could not float but for an air-bladder which its body contains. As the fish grows fatter its air-bladder contracts occupying less and less space, because the fat (which is oil) is lighter than water and therefore less air is needed to give the requisite buoyancy. It has been figured out that a fish 29 1/3 per cent fat would be in equilibrium in sea water without any air-bladder. And, without an air-bladder, a fish 46 1/2 per cent fat would float in fresh water, which has a considerably less density. Upon these data appears to hang a very interesting new discovery, which is thought to explain the reason why sea fishes, such as the shark and salmon, run up rivers to lay their eggs. The Atlantic salmon, hatched in a river, soon thereafter seeks the briny ocean, where it spends two

years getting its growth and developing bone and muscle. During the third year it puts on much fat, which lowers its specific gravity sufficiently to cause discomfort in its navigation. This impels it to seek fresh water, where (because of the less density) it can float nicely and agreeably. So in the fourth year it runs up a river, where, under an arrangement conveniently made by nature it breeds. But it is not the desire to spawn that brings it into the river; the impelling agency is fat. On the other hand, the salmon could not venture into fresh water unless it was fat; because, if lean, it could not float or navigate comfortably therein. It is the same way with the shad and with other sea fishes that run up rivers to spawn. Such, at all events, is the new theory. As for air-bladders, nearly all fishes have them, the flounder and swordfish being among the exceptions. It is found that the air-bladder contains more and more oxygen with increasing depths.

Fishes taken from great depths in days of Aristotle, but apparently the sea have air-bladders filled chief function is to determine buoyancy, while almost undoubtedly the purpose of the air-bladder helps out the oxygen supply of the has been in dispute ever since the fish.
