Testimonial

C. P. Fletcher, Esq.

DEAR SIR,—I do not wish to return to Montreal without expressing my gratitude to you for the very excellent Bell Piano that you placed at my disposal for my recital. I have tried many Canadian Pianos of different manufacturers, and must say that, considering the size of the instrument, I have never found one to equal it for depth and brilliancy of tone. The action is quite as elastic and responsive as in American Upright Pianos of the highest grade. Again, thanking you, very sincerely,

I remain,
Yours,
FRED. E. MORRIS

Painless extraction of teeth

DAIRY STUDENTS.

How They Are Prepared Scientifically For Their Work.

The cut here given shows the students of an up to date dairy school at work in the milkroom. They are running hand separators and parting the milk from the cream in fine style, and quickly. We give the picture here for one purpose. It is to call attention of dairymen and creamery men everywhere to the costume worn by these students. Snowy overalls and blouse and linen cap constitute an outside costume so clean and attractive that it alone would be a great advertisement for the creamery or private dairy whose employees were thus uniformed.

The time is coming when every dairy and creamery in the land will require its employees to be clad in clean cotton or linen uniforms. Nothing that cannot be washed, and washed often, should be worn about a creamery or private dairy.

Fortunately nearly all the states now have dairy courses in connection with the agricultural colleges. The course is much the same in the schools. A fair idea of it may be gathered from a sketch of the branches taught in the Wisconsin Dairy school. Professor Moore, director of the Wisconsin school, says in Hoard's Dairyman:

The student becomes proficient in using the hand separators, the Babcock test and the lactometer, and in all subjects pertaining to making a fine grade of butter.

A course of lectures bearing on the work is given and supplemented by practical work in the laboratory.

In the separator room the student is taught to use the different separators and test the speed, skimming efficiency

DAIRY STUDENTS SEPARATING CREAM.

and capacity of the same, is taught to ripen the cream properly and churn, color, salt, work, score and pack the butter. They are also taught to make good butter by setting the milk in cans and pans in accordance with the older methods.

In the laboratory the students are taught to determine the amount of butter fat with accuracy in a given sample of milk or butter and to detect whether milk has been skimmed or watered.

In stock judging they are taught to determine at a glance the common characteristics of a good dairy cow; in feeding, to prepare rations according to the best authorities and are given hints and suggestions regarding taking care of dairy cows in general; in breeding, to select good stock and breed to increase the characteristics of the dairy type; in agricultural physics, to draft dairy barns and silos, so as to have them convenient and especially adapted for dairy use.

They are also taught to run windmills, steam and gasoline engines, tread powers and all farm motors, so as to be able to attach them to and run cream separators, pumps, feed mills, churns, thrashers, etc.

Ice In Cream.

It has been our opinion for many years that it is better not to put ice into cream if it can be avoided, but if it needs cooling to do so with a vibrating cooler, through the pipes of which cold water runs.

We do not know that the per cent of fat in the cream has much to do with the quality of the butter, but we know this—there is less loss in churning rich cream and churning at as low a temperature as it will churn than in churning poorer cream which must be churned at a higher temperature. With the poorer cream there will be more buttermilk than with the richer cream, and when tested with the Babcock tester it will be found to contain fully as great, if not a greater, per cent of butter fat.—Hoard's Dairyman.

KLONDIKE NUGGETS.

Every Klondike emigrant who hears that only one in 1,000 can make a fortune from the gold mines has a momentary throb of pity for the other 999.—Chicago Record.

It is reported that the Canadian gold commissioner has abolished the name Klondike and substituted Thruklondike. But this will not make it a whit less cold or difficult to reach.—Cleveland Leader.

It is said that in the Klondike country the miners are much annoyed by fine dust which they inhale and which settles on their lungs. If the dust up there is as rich in gold as reported, these fellows are no doubt able to cough up the cash for everything they purchase.—Denver Post.

"WHAT WE HAVE WE'LL HOLD."

Baby when he has once been treated to a bath with "BABY'S OWN SOAP" —wants no other—because he knows no other makes him feel so nice. Many imitations of Baby's Own Soap, look like it, but baby feels the difference.

FOR SALE.

RARE CHANCE

The property occupied by J. J. Gay and son situated in the village of Pownal, 7 miles from Charlottetown, is offered for sale. The proprietors have carried on a large market garden nursery, and seed business for thirty years, and the purchaser will no doubt retain a large share of the local trade. The premises comprise a large dwelling house, a store, warehouse, barn, shed, orchard, and about 15 acres of the most fertile land on the island. This land has been manured year after year, for so long that an old man said the other day: "It is all a bed of manure and could be hauled for top-dressing." This would be an ideal spot for a country merchant, or it would be admirable for a summer resort. The situation is one of the most beautiful on the island. Good bathing, fishing, boating, shooting and within easy distance, churches, post office, school, telephone and shops all at the door. For terms and further particulars, apply to Von Clure Gay, J. J. Gay & son or to,
