

Agriculture.

Profit of Shelter for Animals. A consideration for the physical comfort of animals should be a sufficient inducement for us to provide for them a good protection against the inclemencies of the weather; but as this argument alone will have no effect with some men, we will endeavor to demonstrate that money may be saved to a great extent by keeping them in warm stables.

The best physiologists tell us that the stomach of a man or animal is a sort of furnace or stove, the food eaten is fuel, and its digestion, decomposition, and assimilation a species of combustion. It has also been demonstrated by carefully conducted experiments, that the amount of heat generated in the combustion of wood or coal is exactly in proportion to the quantity of fuel consumed.

We know that if a pig is shut up for fattening in September, and fed five pounds of corn meal well cooked, it will gain in weight one pound per day for the five pounds meal; but if kept until December in a cold pen, although it will eat as much, it will not increase half as much in weight—the balance being required to keep up the temperature of the pig. Let a man of sedentary habits ride two or three hours in a cool, dry atmosphere and bracing wind; he returns invigorated, with a sharpened appetite, and will eat twice as much dinner as usual. His exercise and exposure to a cooling atmosphere have burnt out and exhausted his breakfast, and that ever-present monitor, the stomach, with unerring instinct, calls for more food, or fuel, as the proper remedy to supply the wants of the system, and keep up the heat.

To maintain the body in a state of health, it must be kept at a temperature of 100 degrees, which is done by an ample supply of food and good digestion. If the latter be good and the former in excess, the animal will fatten, while if food is deficient the fat already stored up in the animal tissues will be transmitted to the stomach first, and then consumed for the existing necessities of keeping up the temperature; thus the animal grows poor in flesh.

A depression of only a few degrees for a short time is speedily followed by death. Thus, in the victim of some forms of cholera, when attacked by the poisonous miasma, nutrition ceases, the copious evacuations rapidly depress the temperature, and although it may be in mid-summer, the patient actually dies from cold. Hence the value of a prompt administration of stimulants and tonics, and the success of an empiric who in a woolen manufactory cured his patients by surrounding them with hot fleeces of wool and giving them nourishment and stimulants in hot drinks.

A horse weighing 1000 pounds performing no labor, or a cow of equal weight giving no milk, in a mean temperature of 50 degrees, will maintain a normal temperature of 100 degrees, by being fed 25 pounds good hay every 24 hours, and will neither fatten nor become thin. This is about one pound per hour required to raise 1000 pounds of animal heat 50 degrees.—Now, supposing the out-door temperature to be as low as 20 degrees, and we have to raise the same weight of animal 80 degrees, instead of 50 degrees, which in the same proportion as in a wood fire (and there is no doubt of the analogy of the cases) would require 40 pounds of hay every day to keep the animal from growing poor.

But there is another reason why animals should be sheltered—that of evaporation from the surface. Moisture the bulb of a thermometer and expose it to the wind, and it will fall from 3 to 10 degrees. Moisture your finger and expose it in the same way, and you will instantly feel a sensation of cold, due to evaporation from the surface. The skin of every animal in good health is always moist, and the evaporation consequent upon exposure to bleak winds must of necessity greatly express the animal heat, and require a corresponding increase of food to restore it. Of this much we may be sure, that food is fuel, and the colder the animal is kept, the more food he will require. It is much to be desired that some one having proper conveniences should try careful experiments, and determine positively the proportion and relations of food to temperature and growth. Every observing man admits the truth of the principle, but can only partially estimate its extent.—Hearth and Home.

WATERING HORSES.—Horses should not be kept so long without water that they will drink largely when they get it. Nothing is more common than to hitch a team to the plough, and make them work half a day without a drop. If the plough is started at seven in the morning, water should be given again before ten; and again in the afternoon by four o'clock. Even if half an hour is thus consumed, more work will be done in a day. The objection that horses on the road should not "be loaded with water," is not valid. A horse weighing 1200 will not be much encumbered additionally by 20 pounds of water, while the distention will give him additional strength. Every farmer knows that when he himself undertakes to lift a large log or heavy stone, he can do more by first inflating himself with air, and not infrequently he loses a button or two from his pantalon in the operation. Some degree of inflation by water will add to a horse's strength in a similar manner. In driving a horse on the road at a natural gait of nine or ten miles an hour, I have frequently had occasion to observe that he was laboring with perspiration until I let him drink freely, when he ceased to sweat and evidently traveled more freely.—Don't be afraid to give your horses water; the danger is in making them abstain too long, in which case care is needed.

A lady who had refused an awkward but wealthy suitor, said to a friend as he passed: "Look at him! Could you marry him, even if he had a carriage and horses?" "No indeed," replied the other, "not if he kept a livery stable."

How it Feels to be Hanged.

(FROM THE LOUISVILLE DEMOCRAT.)

We are told that hanging, if successful—that is, if it breaks a person's neck—is the most sudden death he can die. It ruptures the spine in the immediate neighbourhood of the medulla oblongata, and thus breaks up communication of the nerve force, or vital power, to the organs that carry on the human machinery. If the man's neck is not broken, the first action of the cord is to close the trachea, or wind pipe, and thus stop the supply of air. It also compresses the large veins in the neck which return blood to the heart—the jugulars—but does not entirely compress the large arteries that carry the blood to the brain, for those lie deeper. The immediate physiological effects is a congestion of the brain—a congestion not dissimilar in its commencement from the congestion of drunkenness, which is generally regarded as agreeable, and the consequence of this congestion—a consequence that, perhaps, follows in three minutes after the pressure of the cord is felt—is the total abolition of conscious sensation. The man may struggle and writhe in a way terrible to see, but these struggles are like those of convulsions generally—painfully only to the beholder. Therefore, if a man is hanged successfully, he feels only the one sickening sensation of the plunge before he gets to the end of the rope; three seconds of horror. If he is hanged successfully, by strangulation, he feels the same three seconds, and, in addition, between the pressure of the cord and deep congestion of the brain, three minutes of swimming, drowsy, uncertain consciousness—at the worst, three minutes and three seconds; and this is all the misery we give to murderers. Compare with this the pain that man suffers before he dies from an ordinary illness—the drawn-out wretchedness of his three weeks of fever, the days of agony with rheumatism, and the bentforward, restless night before this rheumatism finally brings his damaged heart to a standstill, the months of slow death entailed by a cancerous stomach; in fine, compare the history of any disease with the shrift of hanging, and then reflect that our humanity now obliterates the murderer's three minutes and three seconds by the use of chloroform. Really it is a fine age, and if a man is tired of this world, and wants to get out of it on easy terms, the thing for him to do is to cut his neighbour's throat and be hanged under chloroform.

The question of the legality of the marriage of Priests has been brought up before the Italian Court of Appeal. It transpired during the trial that forty priests in the city of Genoa are married. The Attorney-General argued that the Civil Code recognized all citizens as equal; and now that the grand principle of the separation of Church and State was established, the Judges could only regard the priests in his civil relations. Let Roman Catholics, he said, make their services as splendid as they liked, they should have the full protection of the law, as should the members of all other religious communions; but let them not attempt to interfere with the State. Marriage was honorable and of purely civil obligation, but if to this persons wish to add the priestly benediction, they were at liberty to do so; it was an affair of private conscience, interesting and much to be recommended.

The Times correspondent says "the scenes I witnessed during the delivery and at the conclusion of this speech exceeded my powers of description. Some there were who kept their eyes fixed on the Attorney-General as if they could have eaten him, while the acclamations were so frequent and fervid that it was difficult to follow the thread of the speech. At the end hats were lifted, vivas were shouted, and a universal clapping of hands ensued, such as I have seen only in the enthusiastic audience of a theatre."

J. L. HOLMAN. Head of Holman's wharf } Summerside, Nov. 12, '68

LAND SALES.

LEASEHOLD FARM FOR SALE.

THE Subscriber offers for Sale his valuable Leasehold Property, consisting of 200 Acres of Land, situated in New Village, Lot 19, four miles from Summerside, fronting on Richmond Bay; about 150 Acres are cleared and in a high state of cultivation, and the remainder is covered with fencing. Also, a valuable marsh cutting about 25 Tons of Hay annually. There is on the premises a Dwelling House, 25 by 30, a good Barn, 30 by 40, and a good well of water within a few yards of the door. It is well watered and convenient for pasturing. There is abundance of Mussel mud within 200 yards of the shore, any quantity Seaweed and other manure. For further particulars apply to this Office, or to the subscriber on the premises. TERMS EASY. JOHN TOWNSEND, senr. Mar. 4, 1869.

FOR SALE.

On Township 16, near Auld's Mills. A Freehold Farm, consisting of 84 Acres; eight are under cultivation, and the remainder covered with hard and soft wood. There is a good Brook on it, and it is near a good mussel bank. Apply to JAMES GREEN, Linkletter Road, Lot 17, Nov 19, '68.—tf

FREEHOLD FARM!

THE subscriber offers FOR SALE that VALUABLE FREEHOLD FARM adjoining the Farm of Mr. Stephen Strang, on BEACH POINT, Lot 17, containing 13 1/2 acres of land, 50 of which are cleared and in a good state of cultivation; the balance is covered with wood. It fronts on the shore, and has 5 acres of excellent marsh. There is an abundance of Mussel Mud near the farm, and a wharf for shipping only two hundred yards from it. The above Farm is pleasantly situated, and is only 8 miles from Summerside, by water and about 12 by land. It can be inspected any time and full particulars made known on application to Mr. Stephen Strang, Beach Point, or to the owner at Summerside. SOLOMON STRANG. Summerside, Dec. 17, 1868. —tf

VALUABLE MILL PROPERTY FOR SALE!

THE subscriber offers for sale all that Valuable MILL PROPERTY now occupied by him, situated in MONTROSE, Kildare, Lot 3; consisting of— 1 Grist Mill, 1 Saw Mill, 1 Shingle Mill

The above Mills are all in excellent working order, and have at all times an abundance of water. They are situated in a flourishing settlement, and receive a large share of public patronage.

Also, 15 acres of Land,

surrounding the Mills—on which are a good Dwelling House, a Barn and other outbuildings. Any person wishing to purchase such a Property as the above, would do well to inspect it at an early date. Terms liberal, and made known on application to the owner. GEO. M. CLARK. Montrose, P.O., Jan 21, '69.—tf

Valuable Property FOR SALE IN SUMMERSIDE!!!

TO LET, or FOR SALE, by private contract, that valuable property, opposite the Summerside Bank, and 2 doors west from the Journal Office, fronting on CENTRAL, and running back to St. STEPHEN Street, in Summerside, formerly occupied by Mr. S. W. CLARKE, as a Mercantile Establishment. The building is 60 x 27 feet. There is a commodious SHOP, 25 x 27, 19 feet post, fitted up with the latest improvements; and is well adapted for a general Retail Business. The remainder of the lower flat and the second story is comfortably fitted up, and would suit for two tenements. The House is nearly new, comfortably finished, and in first rate repair. There is a stable and small warehouse on the premises. For further particulars apply to PHOMAS B. HALL Summerside, May 19, 1868.

Lots For Sale!

A FEW WATER LOTS, east of MURHEAD'S WHARF, and a few east of BRAZIL'S WHARF in SUMMERSIDE, for Sale, with first right of grant to channel. —ALSO— A few Building Lots, with admirable view of Harbor. Terms easy. For plan, &c. apply to CHARLES GREEN. Summerside, Jan'y. 4, 1869. —tf

Freehold Farm for Sale!

THE subscriber offers for sale the FARM now in the occupation of Gilbert Gallant, in Cascumpec Village, a short distance from Mill River Bridge, containing about 100 acres, 50 of which front on the Main Post Road, leading to Alberton, and the remaining 50 acres fronting 20 chains on the Mill Road, near mussel mud and sea manure. Well situated for a farm, tavern or mechanic. Terms liberal. For further information apply to GEORGE W. HOWLAN Cascumpec, Nov 4, '68.

Freehold Farm for Sale!

THE Subscriber offers for sale 60 acres of LAND in Lot 17, extending from the Linkletter Road to the shore, about 2 miles west of Summerside. This valuable property possesses the unusual advantages of a beautiful situation, commanding a full view of the entrance to Bedegue Bay. A abundance of sea manure on the shore, and a large quantity of black mud of the best quality. 20 acres are so fertile as never to require any manure, and there is a never failing spring of water. Also a comfortable DWELLING HOUSE and a BARN 30 x 40 feet. Terms liberal. For further particulars apply to the subscriber in Charlottetown. WM. LOCKERBY. Charlottetown, Feb. 4, 1869.—3m
