BIRDS IN JEOPARDY

by Paul Ehrlich and Darryl Wheye
Stanford University

Birds in Jeopardy provides an overview of the extent of declines as well as the current conditions (so far as they are understood) of each bird that is either federally protected or recognized by the National Audubon Society to be undergoing non-cyclic declines.

Roger Tory Peterson stated that "This important book should be read by every nature-oriented citizen. The texts are crammed with information, and the birds come alive in Darryl Wheye's portraits. The ingeniously organized book is not just another essay on the plight of the environment. To document the declining numbers and their causes, the authors have sifted through innumerable and often conflicting reports of biologists, federal agencies, and vested interests. Although only a handful of North American birds have become extinct within our time, well over 150 others are in trouble, either endangered or vulnerable. In most cases the root causes are there for us to see, and wherever birds are in trouble, so is the land on which they and innumerable other living things depend. This evocative presentation alerts us to events we must deal with."

This book by Paul Ehrlich, David Dobkin, and Darryl Wheye is 227 pages with 191 colour halftones and 1 map. It is available in paperback (ISBN 0-8047-1981-0) or cloth (ISBN 0-8047-1967-5). This publication should be available through better bookstores or the Canadian Nature Federation Bookstore. They can also be ordered directly with a charge card from Stanford University Press at 415-723-1593 or Fax at 415-725-3457. The prices are \$17.95 U.S or \$45 U.S. respectively + \$2 for shipping and handling.
