NEW YORK

NEW YORK (AP)—Strength in sugar issues, a recovery by tobaccos and some wide moves by selected issues featured an irregularly higher stock market Friday. Trading was the week's lightest.

The list moved irregularly most of the session. Buyers moved in late and put the popular market indicators a little on the upside.

The Dow Jones industrial average, which was down .34 at noon, ended the day with a gain of 1.97 at 724.81 another new closing high for 1963.

Volume dropped to 4,420,000 shares from 5,610,000 Thursday.

The Associated Press average of 60 stocks rose .4 to 273.6, another in its string of historic highs.

American Tobacco, up ¼, and Reynolds Tobacco, up ⅝ were also among the volume leaders.

South Puerto Rico Sugar, virtually alone among sugar stocks, was affected by reports that the Dominican government is planning to impose a heavy excess-profits tax on sugar.

Among the other sugars, Central Aguirre rose 2¼, American Crystal Sugar 9, American Sugar Refining 1⅜, and Holly 2⅝.

Among Canadian stocks, McIntyre Porcupine, Dome Mines, Aluminium and Canadian Pacific all closed ¼ higher. Hudson Bay Mining lost ⅝.

Prices on the American Stock Exchange worked unevenly higher. Canadian Marconi, Preston Mines and Scurry Rainbow Oil were all down ⅛.

British Scientists Criticize Space Contamination By U.S.

LONDON (Reuters)—A group of British scientists said here particles from the United States' high-altitude nuclear explosion last July "interfered with the proper functioning of many artificial satellites."

The result was that the flow of scientific results was either interrupted or ceased completely.

The group issued its findings in a report requested by Science Minister Lord Hailsham.

The report said the explosion last July high over the Pacific changed the charged - particle environment of the earth in a way likely to last for years.

It recommended if any more high - level nuclear explosions were planned by any country, they should first be discussed by an international group of scientists.

STUDY CONTAMINATION

The report followed a study of contamination of space by high-level nuclear tests, including the American "Rainbow Bomb," by a party headed by J. A. Ratcliffe, director of radio research at the department of scientific and industrial research, and including Sir Bernard Lovell and Professor Martin Ryle, British radio astronomers.

It said of the July, 1962, explosion:

"The newly - injected particles have interfered with the proper functioning of many artificial satellites by damaging either the solar cells which supply their power or the semiconductor devices used in their circuits, with the result that the flow of scientific results has either been interrupted or has ceased completely."

HAS MANY HOMES

There now are about 2,500,000 homes in greater London, about 40 per cent of them owner-occupied.

AID FARMERS

ST. HYACINTHE, Que. (CP) The Quebec government's artificial livestock insemination centre here announced it helped some 14,000 Quebec farmers to increase their beef and dairy herds during the last 12 months—an increase of 17 per cent over the previous year.
