#### Red-bellied Snake report:

Dr. Doug Sobey sent along a photograph and the following report on two  
red-bellied snakes in 1989.

One red-bellied snake corpse was found on the weekend of 5 -6 August,  
1989 on a cottage lane cut through the woodland. The snake was found on the  
roadway (presumably it had been run over) - about 50 meters north of the  
shoreline of the Montague River perhaps a couple of kilometers west of  
Brudenell Point.

Later in the same month (about mid-August) the second (and living) snake  
was found under bricks as shown in the photograph. I caught it, and after a  
brief examination released it. The spot was only about 15 meters from the spot  
where the dead snake had been found.
