Patent Lactal or Artificial Breast.

THIS article is intended to take the place of the common Nursing Bottle, to which there are many objections, and is more easily used and more aware. With most children, there is usually great difficulty in teaching them the use of the bottle, and it is often rendered impracticable. The Lactal, by its peculiar form and adaptation, enables the child to feed in the natural position, thus inducing it to think that it is sucking its mother's breast, and the mother. Besides being far preferable as to form and convenience of application, it combines the utility of all kinds of nurse bottles now in use, for the mouth of the Lactal can be fitted with a cork, and the common ivory or silver tube.

Hobson's new and improved erect Artificial Breast or Nursing Bottle, for sale.
