SWEDISH TIMBER
Sweden's exports of sawn and planed timber in 1955 reached about 1,000,000 standards, highest since the 1920s.

Farm Income Higher in East, Down in West

OTTAWA (CP) - Cash farm income last year fell 2.3 per cent below the 1954 figure, the bureau of statistics reported Friday. Income was up in the east but lower on the prairies.

Cash income from sale of farm products and from participation payments on previous years' prairie grain crops in 1955 amounted to an estimated \$2,323,330,000 compared with \$2,377,900,000 in 1954 and the all-time high of \$2,849,300,000 in 1952.

Supplementary payments made under provisions of the Prairie Farm Assistance Act amounted to \$33,300,000 in 1955 compared with \$2,400,000 in 1954 and \$1,600,000 in 1953.

The more important increases in cash returns were recorded for wheat, flaxseed, corn, potatoes, cattle, dairy products, poultry meat and eggs. The more important reductions occurred in the case of participation payments, oats, barley, rye and hogs.

Estimates for the province, with 1954 figures in brackets, included: Prince Edward Island, \$25,734,305 (24,031,000); Nova Scotia, \$45,305,000 (\$41,017,000); New Brunswick, \$48,341,000 (\$48,419,000); Quebec, \$414,414,000 (\$407,947,000).

THE GIFTED CHILD IN THE RURAL SCHOOL
By Dr. S. R. Laycock, Psychologist and Teacher.

Since the classroom teacher is the key to the effective guidance of the gifted child in the rural school attention will be focused on how the superintendent of schools can help his rural teachers more adequately to meet the needs of gifted children. The problem is discussed under four headings:

1. Just what objectives should the rural teacher have for the gifted child?
2. How can rural teachers identify the gifted pupil?
3. What are the problems relating to the acceptance of the gifted child by his school-mates and his community?
4. What specific things can be done to help the teacher to give the most effective guidance to his gifted pupils?

THE TEACHER'S OBJECTIVES
Because of the gifted child's intellectual brilliance and possibilities for academic success, there is sometimes a temptation to the school to concentrate on the development of such a child's intellectual capacities and to neglect other aspects of his growth. As in the case of mentally and physically handicapped youngsters, the teacher needs to remind himself a child with all a child's basic physical and emotional needs as well as a child's problems of growth and development. The general objectives for the gifted child are, therefore, the same as those for all children. These are expressed in the mental health objectives stated many years ago as:

"To help each child to give his best to the world and to know the deep satisfaction of a fully lived life."

In other words, the school's objective for the gifted child must be a balanced development of physical, social, emotional, and intellectual growth. As the Very Reverend G. Emmet Canon Carter, director of the Jacques Cartier Normal School, Montreal, said in a recent book review: "Can anything be done to help a child with a 'mind-centred' school? The very image which arises before one's mind is little short of monstrous. I am reminded of the horrible representation of God which consists of portraying him as a tri-angel with a long, thin, pointed tail. However, even if the teacher has as his objective the most complete development of the intellectual life of the gifted child, he still would have to stress the child's emotional and social development to attain a balanced development. Emotional development is greatly interfered with learning and the emotionally disturbed and troubled child is unlikely in the long run, to achieve his finest intellectual development. Attention to his social and emotional development is therefore, important from any angle."

N.Y. Stock Market Suffered Heavy Decline Last Week

NEW YORK (AP) - The stock market last week suffered its heaviest fall since the major demand pushed the price up to be between 70 and 71. That proved to be the high point of the week for the market and the stock declined thereafter. It closed Friday at 65½ bid and 66 asked, low for the week.

Canadian issues joined in last week's fall. International Nickel dropped 3½ to 79½ over the five-day period. Hiram Walker was off 1½ at 71. McIntyre slipped 1½ to 82½. Canadian Distillers Seagram was down 1½ at 37. Dome Mines added ¼ at 14½.

On the American stock exchange Lake Shore was up ¼ to 54. Royalite Oil dropped ¾ to 13¼ and Giant Yellowknife remained unchanged at 6.

It was calculated that \$7,000,000,000 was erased from the quoted value of all listed securities last week. In the final week of September, the loss amounted to more than \$9,000,000,000.

The Associated Press average of 60 stocks last week fell back \$6.10 and closed at \$172.20.

The market last week declined in four out of five sessions. Causes for the persistent drop in prices were manifold. Actually it was all over the year since the start of the year.

The number one depressing factor, brokers seemed to agree, is the gradually spreading realization among investors and traders that the U.S. economy in the current year probably won't match last year's boom totals.

This is especially true in the motor industry. Motor stocks have been selling off from their peaks for some time in the face of declining production, and many other stocks now are also adjusting their sights to probably future values.

The number one stock in the news last week was Ford. On Tuesday the largest underwriting syndicate ever formed offered 10,000 shares of Ford common stock for sale at 64½. Trading started that evening, a heavy demand pushed the price up to be between 70 and 71. That proved to be the high point of the week for the market and the stock declined thereafter. It closed Friday at 65½ bid and 66 asked, low for the week.

U. S. Mills Set Production Mark

CLEVELAND (AP) - American steel mills set a production record last week, Steel magazine says.

The metalworking weekly says mills operated at 85.3 per cent of capacity and turned out 2,428,000 net tons. The previous high for a single week was 2,421,000 net tons in mid-December.

The magazine reports its price composites on both finished steel and scrap remained unchanged. Finished steel is at \$128 a net ton. Scrap held at \$53.33 a gross ton, the first time in 12 weeks the price has not gone up.

Consumer Credit Has Ballooned

OTTAWA (CP) - Consumer credit ballooned during the third quarter of 1955 to \$2,212,000,000, up \$305,000,000 from the first quarter of the year.

The Bank of Canada's statistical summary issued Saturday shows consumer credit rose steadily during the first three quarters of the year after a slight decline from the \$1,874,000,000 at Dec. 30, 1954. At March 31 last year it stood at \$1,907,000,000 and at June 30 had risen to \$2,089,000,000.

All forms of consumer credit rose steadily during the year, the summary showed.

Claims Renault Was Murdered

PARIS (CP) - More than 11 years after the death of Louis Renault, pre-war owner of France's largest automobile factory, his widow filed a suit Friday claiming he was murdered by "unknown person or persons."

A suit against "unknown persons" in France is commonly used to force further investigation of a case.

Renault was arrested after the Second World War and sent to prison on a charge of dealing with the Nazis.

Mrs. Renault claims her husband "was struck by his guards, or with their complicity" in his cell while in jail. He later was transferred to hospital and to a clinic where he died.

The post mortem examination showed death was due to cerebral hemorrhage.

In her suit Mrs. Renault said an x-ray disclosed Renault had suffered a fracture of the first cerebral vertebrae.

However, even if the teacher has as his objective the most complete development of the intellectual life of the gifted child, he still would have to stress the child's emotional and social development to attain a balanced development. Emotional development is greatly interfered with learning and the emotionally disturbed and troubled child is unlikely in the long run, to achieve his finest intellectual development. Attention to his social and emotional development is therefore, important from any angle."

Insurance For Aviation Crews

WINNIPEG (CP) - Great West Life Assurance Company has announced it will provide aviation accident insurance, previously only available to crews of Trans-Canada and Canadian Pacific Airlines, to a broad group of other Canadian and United States civilian flyers.

Changes include:

1. Crew members of all Canadian and U.S. licensed commercial airlines will be covered on a world-wide basis. Up to now the company covered only TCA and CPA flyers operating in Canada and the U.S.
2. Crew members of company-owned aircraft; certain classes of private pilots; and professional pilots operating charter aircraft for hire, including sightseeing, photography, surveying or forest protection flying will be considered for domestic coverage in Canada and the U.S.
3. Reduction in the annual premium rate charged to TCA and CPA crew members for accidental death coverage.

Employee benefits include profit sharing, pension, group insurance, hospitalization and vacation with pay.

WANTED -- IMMEDIATELY

HANDCRAFTS INSTRUCTOR Grade II for the HANDCRAFTS DIVISION of the DEPARTMENT OF TRADE & INDUSTRY

Applicant must be a graduate of an approved handicraft school or course, preferably with some experience. Information and application blanks may be obtained from the

CIVIL SERVICE COMMISSION, Provincial Building, Halifax, Nova Scotia.

in relation to other children needs to:

- (a) possess superior ability in reasoning, generalizing, dealing with abstractions, comprehending meanings, thinking logically, and recognizing relationships;
- (b) perform highly mental tasks, an ability described as "power";
- (c) learn more readily and easily;
- (d) show intellectual curiosity;
- (e) possess superior insight into problems;
- (f) have a wide range of interests;
- (g) show greatest superiority in reading ability, both in speed and comprehension, usage, orthographical reasoning, science, literature, and the arts;
- (h) do effective work independently;
- (i) apply originality and initiative in intellectual traits;
- (j) apply less patience with routine procedures and drills;
- (k) exhibit alertness, keen observational ability, and quick response;
- (l) show as much unevenness in abilities in the subject-matter as in the subject-matter itself;
- (m) have a more intense span, show more interest in abstract than practical subjects and less in manual activities;
- (n) have an interest in the future as well as in the present, and death, though unable emotionally to accept the realities of the latter.

STUDY THE PUPILS
Teachers need their attention called specifically to such criteria as the above. The superintendent may ask them to study their pupils and to list for him any who seem to be characterized by several of these traits. Then, if the teacher is unable to give group intelligence tests, the superintendent may wish to do so.

In any case, teachers as a group are not very skilful in picking out gifted children, so the young, inexperienced teacher in a rural school should be expected to do so without help and guidance. Long ago Terman found out that teachers could pick out approximately one-third of their gifted pupils. However, if teachers were to become more aware of the reasons why they overlook such children, their efficiency in recognizing the gifted child could be improved.

For example, teachers often overlook the factor of chronological age in picking out the gifted child. The child's chronological age is often not commensurate with his intellectual achievement. The child's chronological age is often not commensurate with his intellectual achievement. The child's chronological age is often not commensurate with his intellectual achievement.

Some of the accounts of the boyhood of Jesus as found in the pseudo-gospels which were not accepted in the canon of the New Testament, have a ring of truth in their account of Joseph's difficulties with his children.

Since the gifted child is apt to bristle with ideas and since he is impatient of ignorance and stupidity, he is apt to appear as a threat to his teacher, especially if the latter is of only average intelligence and particularly if the teacher is not a well-adjusted individual. The teacher who feels insecure and inadequate is apt to fear and resent the gifted pupil. Gifted children, like other children, need acceptance often they find that their teachers reject them and are anxious to take them down a peg.

My suggested booklet would have a paragraph which would help the teacher to understand his own possible reactions to the gifted pupil and which would help him to guard

When storms knock out electric power...

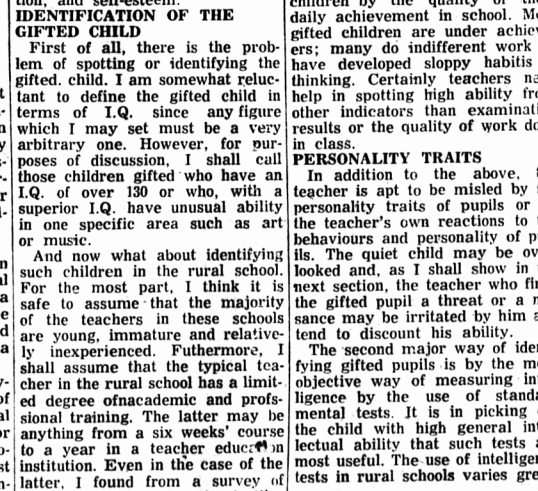

Prevents losses from frozen plumbing, food spoilage. Protects your family from dangers and hardships.

When storms interrupt electric power you have no heat, refrigeration, lights or even water if you have your own well. Radio, sump pump, water heater and other electrical equipment cannot operate.

You can avoid losses, dangers and hardships by installing an Onan Emergency Electric Plant in your garage or basement. Very little space is required; installation is simple and inexpensive. When power outages occur, the Onan Plant supplies regular 115-volt A.C. electricity for as long as the emergency exists. Automatic controls start the plant when power is interrupted and stop it when power is restored to protect your home even when you're away!

Onan Emergency Electric Plants are built in capacities to fit the needs of any home or business... 1,000 to 50,000 watts.

FREE estimate

an ONAN Emergency Electric Plant supplies all the electricity you need!

MODEL SCW 5,000 with A.C. generator-powered

STAIRS INDUSTRIAL DIVISION

STAIRS INDUSTRIAL DIVISION

from one part of the country to the other. In some cases, the superintendent or the teacher administers the intelligence tests to pupils as a regular procedure. In other areas, the teacher is not competent and the superintendent hasn't the time to give such tests. Where results of mental tests are available, they often identify gifted children who would otherwise be missed.

To come back to my suggestion of a booklet on gifted children for the use of rural teachers, one section should deal with the problem of identifying gifted pupils. It should (a) ask the question, "Have you any gifted pupils in your school?" (b) tell the teacher, "You can often spot a gifted child by watching for the following characteristics" (and then list some of the characteristics mentioned by Scheifler); tell the teacher "You are apt to miss recognizing the gifted child because of the following reasons" (and then list the reasons discussed above); (d) suggest to the teacher that he make notes on the characteristics displayed by pupils he thinks may be gifted and show these to the superintendent on the occasion of his next visit.

If the above suggestions are to be of any value, the superintendent must be genuinely interested in the project and be prepared to discuss the matter with the teacher. I was an insufferable brat but, in my encounter in being accepted by my school, I was humiliated unmercifully until school became a nightmare. My parents finally became aware of my acute unhappiness and, wisely or unwisely removed me to another school.

Whatever may have been the facts in my own case, the teacher of a gifted pupil must not praise him unduly lest his social relationships be jeopardized. Rather he

must and ways of helping him to get along with his classmates without at the same time destroying his desire to achieve in accordance with his ability. In doing this he may need to help him to develop social, athletic or dramatic skills and to encourage his participation in activities of various kinds. Sometimes he may need to give him specific personal counselling.

In a rural community where everybody knows everybody else and where family pride and jealousy have to be reckoned with, the teacher may need to help the gifted child to be accepted by his community. Success in this may lie in helping the gifted child to learn to play down his abilities rather than to boast his achievements, and in developing his ability to make friends. He must learn, for example, to respect others and that there is no substitute for genuine interest in and kindness towards others. The gifted child must learn to "suffer fools gladly" or his chances for happiness and leadership may be greatly impaired.

(To be continued)

The booklet for teachers should make them aware of some of the difficulties which a gifted child may encounter in being accepted by his school. It is the community and of how the teacher may help in his adjustment to this problem.

This department is conducted by the Prince Edward Island Teachers' Federation. Contributions are welcomed and should be sent to Estelle Bowness, General Secretary, 98 Prince St., Charlottetown.
