Siberian Buildings Tilt Despite Soviet Technique

By GERRY McNEIL
OTTAWA (CP)—Siberian buildings still tilt despite impressive Russian knowledge of permafrost, two National Research Council scientists said Monday.

"We were using better construction techniques in the north during the last war," G. H. Johnston, a civil engineer with the NRC, told a news conference.

He and Dr. Roger Brown, a geographer, returned last week from Russia after a two-month visit to gather information on permafrost.

Half the territory of both Canada and the Soviet Union is permanently frozen. With millions living in Siberia, permafrost research has been intensive for 30 years.

While he was interested in the distribution of permafrost and the terrain, Mr. Johnston also studied construction problems and techniques.

DIDN'T USE INSULATION
The Russians hadn't used insulation until recently, meaning

Increased Flow Of Aid Noted To Underdeveloped Areas

PARIS (CP)—The flow of aid and investment from wealthy nations to the underdeveloped countries of Africa, Asia and Latin America climbed by about \$1,000,000,000 in 1965, says an authoritative review published today.

But Canada, for one, had trouble distributing all available funds and as a result showed a drop in the amount of government assistance she gave to underdeveloped nations at a time when most other wealthy nations were increasing their commitments.

The situation is set out in a 170-page booklet issued by the Organization for Economic Co-operation and Development over the signature of Willard L. Thorp, chairman of the group's development assistance committee, an OECD subdivision which helps contributing nations to share information and experience in foreign aid.

The 15 countries represented on the OECD's development assistance committee together provide for 90 per cent of the total aid and investment to the poorer nations. The rest comes from the Communist bloc and such non-members as Switzerland.

Last year, the total flow of financial resources to the underdeveloped world from committee members came to \$10,149,

400,000 in U.S. dollars compared with \$9,081,000,000 in 1964. Nearly two-thirds of the total was in the form of government or other official spending, either directly in bilateral aid or indirectly through United Nations and other multilateral agencies. The rest was in the form of private capital — invested, loaned or donated.

Five of the 15 member nations showed reductions in government-aid and investment in 1965—Canada, France, Norway, Portugal and the United Kingdom.

Government aid from Canada on a bilateral or multilateral basis fell to \$120,000,000 U.S. from \$127,700,000 in 1964.

Comparing the flow of aid and investment with a country's national income, Canada ranked second to last in 1965 in the total provided by both official and private sources.

In at least one positive sense, Canada was a leader.

The committee had previously recommended that members make it easier for underdeveloped countries to pay back loans — either by reducing interest rates or extending the time needed to repay — since some recipient countries were being forced to use much of their current aid to settle old debts.

Canada "recorded a substantial improvement" in its loan terms, the review said, the only country to do so among the 15.

CONTRACT BRIDGE

The bidding:
South West North East
1♣ 4♠ 4♣ Dble
Pass Pass Pass

Opening lead—two of hearts.
Bridge is primarily a partnership game. Whether it is during the bidding or during the defensive play, you send certain messages to partner and also receive certain messages from him. If you or your partner slip up in sending or receiving the messages properly, something is wrong with your partnership and your code of communication is in need of repair.

Sometimes the message to be sent must be very carefully transmitted. Very often there is a misinterpretation by the receiver. Here is a somewhat delicate case where the defense failed because of a breakdown in communication.

West led a heart against four spades, West discarded a dia-

low from dummy and took East's nine with the ace. When South now played the jack of spades, West discarded a diamond and East won the jack with the queen.

East was anxious to get a heart ruff and therefore played a club to his partner's ace at trick three. But West misinterpreted the play and returned a club, thinking his partner had a singleton in that suit. As a result of this misunderstanding, South made four spades doubled.

It is hard to blame West for returning a club. It seemed to him that East was far more likely to have a singleton club than a singleton heart.

East could have saved the situation by returning the jack of diamonds at trick three instead of a club. Declarer would ruff it in dummy and lead a low spade which East would take with the ace.

But when East now played a club to the ace, West would easily have been able to deduce that the club was not a singleton because East would have led it much easier if it were.

West would therefore have been forced to return a heart, and this return would have defeated the contract one trick. The right message, properly sent, would have done the job.

Canadian would benefit from Russian knowledge.

On the other hand, the Russians were deeply interested in Canadian methods of building above ground in cold climates.

The scientists made Yakutsk, roughly as far north as Yellowknife, N.W.T., but about 30 times as populous, their base.

They were impressed by Siberian air services and noted that Yakutsk, unlike Yellowknife, has television and streets that compare with Ottawa.

They found no sign of the concentration camps in Siberia. Workers in the new diamond mining town of Mirny, which means Peaceful, and Bratsk, which means Brotherhood, were paid double the wages they would get in Moscow. Billboards, signs and posters exhorting hard work were everywhere.

These codes laid down formulas for placing heavy-duty cement piles and foundations in permafrost.

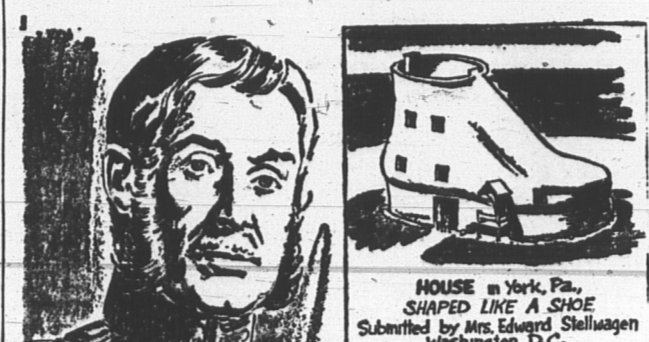

PLAN CODE FOR CANADA
A building code for such foundations in Canada is being compiled now, Dr. Brown said.

KEEP SHIPS MOVING
The port of Toronto handled 1,489,000 tons of cargo in 1965.

CAPITAL DOUBLES
The population of Moscow increased to 6,400,000 this year from 3,000,000 in 1935.
