THE DAILY EXAMINER

THE LEADING DAILY NEWSPAPER OF P. E. ISLAND,

Is issued every afternoon, from the office of THE EXAMINER PUBLISHING COMPANY, in the London House Building, Queen Street.

RATES OF SUBSCRIPTION.
(IN ADVANCE)

ONE YEAR	$4.00
SIX MONTHS	2.00
THREE MONTHS	1.00
ONE MONTH	0.35

Sent post paid to any part of Canada or the United States.

ADVERTISING RATES.

For small advertisements which are ordered for only one or two weeks the charge is 5c cents per inch for the first insertion, and 2 cents for each continuation. Rate cards are furnished on application at the office. Special contract prices at a reduced rate are quoted for advertisements four inches in size or larger, which are to run for three months or longer.

No special notices inserted unless paid for at the rate of 10 cents per line, and under no circumstances will such paid notices appear in the local column.

Special discounts made on all advertisements connected with Church Fairs, Bazaars, Picnics, etc. No notices will be inserted with the same unless the regular rate of 10 cents per line is paid.

That THE EXAMINER is considered by our Merchants and Manufacturers to be the leading newspaper in P. E. Island, and consequently the most valuable advertising medium through which to make their announcements public, is abundantly proved by the fact that in order to accommodate our advertisers we have been compelled to enlarge the paper to its present size.

THE DAILY EXAMINER is for sale by the following agents:—
R. H. Mason, Post Office, Charlottetown
Harvie & Co. 61 George Street, "
Theo. L. Chappelle, Queen Street, "
J. McIntyre Maipeque Road, "
C. Paul, Lower Spring Park Road, "
W. M. Coffin, Grafton Street, "
D. Chappell, Prince Street, "
Bazaar Store, Queen Street, "
S. Gray, News Stall, P. E. I. Railway, and on the trains.
M. & T. J. Walsh, Eclectic Bookstore, Summerside.
Harry McFarlane, Souris.
Hon. D. Gordon, Georgetown.
D. A. Egan, Mt. Stewart.
G. M. Clarke, Alberton.

The Weekly Examiner

Is issued every Friday morning from the publishers' office. It is made up of matter which has appeared in the Daily editions, and is a first-class weekly newspaper—interesting and full of the latest news.

The subscription for THE WEEKLY EXAMINER, post paid to any part of Canada or the United States, is one dollar per year.

Advertising rates on the same scale as given bove for THE DAILY EXAMINER.

THE BRAIN OF WOMAN.

JUST WHEREOF IT DIFFERS FROM THAT OF MAN.

A Talk With J. C. Browne—An Expert Who Has Examined 1600 Brains Declares That the Two Sexes Are Radically Different in Cerebral Nature.

A Westminster Gazette writer recently interviewed Sir James Crichton Browne at his home in London.

"Would you," asked the visitor, "as an expert in questions connected with the brain, favor me with your views regarding Professor Buchner's argument upon 'The Brain of Women?'"

"I regard it as very fallacious in biological argument. The tone of it is objectionable, too, because it drags into the question the matter of inferiority and superiority as between men and women, which I maintain is beside the mark, for, although Professor Buckner is writing a merely popular article, he is dealing with the arguments and with the attitude of scientific men in connection with this question, and he must know that scientists do not approach the subject upon this ground at all. I do not say woman's brain is of less weight than man's brain, therefore she is his inferior. Certainly not. But I do say this; that there is a difference between the male and female brain, just as there is a difference in their body formation. Briefly, there is a mental difference, just as there is a physiological difference between the sexes. Woman does not possess the same bodily proportions as man, nor the same strength of muscle. What she lacks in these directions is fully compensated for by her greater beauty of form and grace of movement; in like manner, although she does not display so strong a reasoning and critical faculty as men, she excels him in quick perception and intuition."

GREATER WEIGHT OF THE MALE BRAIN.

"Would you tell me what are the structural differences between the male and female brain?" "First, there is that of mass and weight. Noting the average difference in brain-weight, viz., 5 ounces, and the average difference in stature, viz., 5 inches. I still find there is still an excess of brain-weight of one ounce in favor of the male. I have arrived at this conclusion by personal observation, having weighed the brains of some 1600 men and women. All available evidence points to the conclusion that the male brain exceeds the female brain in weight in this country to an even greater degree than has hitherto been believed, and I contend that the smaller size of the female brain is a sexual distinction, and is not to be accounted for on the ground of environment, education or habits of life."

A STUDY IN HEADS.

"But does quantity necessarily mean quality?"—"No, it does not, but quantity is the primary consideration. A large, massive brain indicates great mental power. Compare the heads of the idiots at the Eastwood Asylum with the heads, say, of the Fellows of the Royal Society, and you will find my theory demonstrated. Le Bon has made an examination of the heads of three classes—the peasants, shopkeepers and men of science—with the result that the size of the heads corresponds to the known intellectual capacity of the three different classes."

WHAT AN OUNCE OF BRAIN MAY MEAN.

"Admitting your conclusion that the male brain is at least one ounce heavier than that of the female, it does not strike me as being a very great difference"—"One ounce of so precious an organic product as brain tissue," said Sir Crichton Browne, "may mean a great deal. That one ounce evenly distributed over the surface of the brain would certainly involve a very marked difference in mental capacity, but when you have an extra ounce localized it may be still more important.

SHAPES OF MALE AND FEMALE BRAINS.

This brings me to the second sexual distinction in brains. We have already considered weight; now we come to balance of parts. Professor Bulchner says that the frontal lobes are larger in the male; Professor Broca declared that the occipital lobes are more voluminous in the female, and my own observation, as far as they go confirm Broca's conclusion, and show that while the frontal lobes are equally developed in both sexes the parietal lobes, the center of the brain, are larger in the male than in the female, and the occipital lobes are larger in the female than in the male, and these latter being sensory in their functions impart to her a quicker perception. So we find that not only is the female brain less in weight, but it is different in shape.

LESS GREY MATTER IN THE FEMALE BRAIN

"The third brain difference between the sexes is one of the convolutional arrangement. The grey matter of the brain is convoluted, and the extent of surface depends upon these convolutions. We see it through the animal kingdom. The rabbit and the marmoset monkey have smooth brains. Many convolutions mean much grey matter, and the female brain, being more symmetrical, like her body, and not so much convoluted as that of the male, has consequently less grey matter. Some observations of my own indicate that the specific gravity of the grey matter is lower in the female than in the male brain.

THE RICHER BLOOD IN THE MALE BRAIN.

"There is yet a fourth difference to consider, a most important one, that of the blood supply. In company with Dr. Sydney Martin I have made investigations as to the size of the great arteries that supply the brain. These show: that the diameters of the internal carotid and vertebral arteries, taken together, are slightly greater in the male than in the female; but when the difference in size of the male and female brain is taken into account, it will be found that the female brain receives a larger supply of blood in proportion to its mass than does the male brain. But again we have to consider that the blood going to the female brain is poorer in quality than that going to the male brain, and contains only 4,500,000 corpuscles to the cubic millimetre, instead of 5,000,000, as in the case of the male; also, there is a marked difference in the calibre of the large arteries supplying the male and female brains respectively. The general conclusions of Dr. Sydney Martin and myself amount to this: That the anterior region of the brain is comparatively more copiously irrigated with blood in men, and the posterior region in women. And as the blood supply to an organ indicates the measure of its activity, we find that men have a greater supply of blood to the frontal lobes of the brain, where the higher psychical functions are localized; and in women the larger supply is to the occipital, which is mainly concerned in sensory functions, pointing clearly to the intellectual and emotional differences of the sexes All through life the male brain differs from the female in capacities, aptitudes and powers.'

EDUCATION "THE GUIDANCE OF GROWTH."

"Do you not think that the advance education of women will in a measure counteract this difference?" "There is an exaggerated notion abroad of what education can accomplish in developing the brain. Education does not impart faculties—these are born in the child. It is simply the guidance of growth."

"But faculties may lie dormant for the want of education, as they often do in women, may they not?" "They may, but I fear that what woman gains intellectually by the higher education now in vogue she will lose in beauty and grace, and often in health, too. It looks to me like straining her faculties against Nature. Woman's personal charms are her greatest power; we must not have these destroyed, and she greatly excels man in perception, intuition, and the moral faculty. Among the Garo nation, a people dwelling on a range of hills between the Brahmapootra and the Soorma Valleys, the women are supreme. They woo the men, they control the affairs of the home and the nation, property descends through them, and in everything they are dominant, but—note the sequel—they are the very ugliest women on the face of the earth."

And with this dreadful example of the Garo women looming up before our fair English girls, I thanked Sir Chrichton Browne for the "interview," and left his presence, feeling that when this was made known the average woman would be seeking for diminution rather than enlargement of brain.

ONLY ONE OF ITS KIND.

Paper in the Arctic Circle Which Appears Once a Year.

The Eskimo Bulletin is the most unique newspaper in the world, and is the only journal published within the Arctic circle. It is printed at Cape Prince of Wales, Alaska, in latitude 54 degrees 40 minutes, and is issued only once a year.

Cape Prince of Wales is a low sand spit running out just where the Behring Strait joins the Arctic Ocean. It is destitute of timber, and is about as barren and desolate a spot as could well be imagined. On it, however, is situated an Esquimau village and a missionary school. The teacher is Harrison R. Thornton, a relative of ex-Supreme Judge James D. Thornton of this city from whom a copy of the last number of the Bulletin was procured. It is dated May 1, 1893.

The Bulletin is a small sheet, 12x8 inches printed on one side only, of stiff, white paper. It is printed by the hektograph process, which is simply a method of multiplying copies of writing. The writing is first made on paper with prepared ink, and is then impressed upon gelatine. From the gelatine impressions are taken of many other sheets. As there is practically one mail to and from Cape Prince of Wales during the year, one issue of the paper during the period is quite sufficient.

This curious little paper contains a variety of news arranged under different heads. In mirthful imitation of the daily papers of other localities it triumphantly carries at the head of its columns the legend, "Largest circulation in the Arctic," and also the additional boast of "Only yearly paper in the world."

The headings are "Local Items," "Rural Notes," "Society," "Fashion," "Marriage Notices," "Whiskey in the Arctic," is the heading over an editorial. Every scrap of news is like a breath from the far North. As space is scanty condensation is a fine art with the editor. He displays quite a fund of humor, too, and there is a strain of gentle playfulness in nearly everything he writes.

Mr. Thornton has made a profound study of the Esquimau language, and is engaged in compiling a dictionary of the Aleut tongue. During the progress of his studies he has made a singular discovery. The Greek and Sanscrit were the only language heretofore known to have three numbers—singular, plural and dual. Mr. Thornton has discovered that the Aleut language also has three numbers. This is regarded as a discovery of which philologists may well take note, as the origin of the Esquimau has been the subject of much discussion and speculation. Mr. Thornton is gathering a large quantity of material respecting the manners, customs, religious ideas, traditions and lingual peculiarities of the tribes of Alaska, which he will probably publish in book form.

A Monster Aerial Castle.

The most extraordinary scheme in connection with the exhibition to be held in Antwerp next year is proposed by M. Tobiensky and his friends. They intend to construct for demonstration there and to form the chief attraction of the exhibition, similarly to the Eiffel Tower in Paris and the great Ferris wheel at Chicago, a monster aerial castle capable of accommodating 150 passengers. This castle will consist of two captive balloons connected together by three cylindrical compartments, and the total weight of the captive castle, with a full complement of passengers, will be 36½ tons. The castle will be connected with the ground by means of four stout cables, and ascends to it will be effected by means of two small balloons carrying up and down every twelve minutes from ten to fifteen persons. The aerial castle is to be built of steel and bamboo pipes covered with Chinese silk and surmounted by a metallic texture. The castle will, according to the condition of the atmosphere, be maintained at altitudes varying between 650 and 1600 feet, and it will be possible to haul it down to the ground in thirty minutes. In length it will be 98 feet, and the area of the upper surface will comprise 200 square metres. It is said by the promoters that this method of constructing the balloon will enable it to withstand a storm up to a wind pressure of 220 pounds. Apart from this, additional precautions for safety will be taken by placing the castle in direct communication with the Imperial Observatory, so that changes in atmospheric conditions will be readily known. The castle, which will be supplied with the current from the electric light machinery of the exhibition, will at night be lighted by thousands of electric lamps, and will form an immensely curious and interesting spectacle. It is also intended, apart from this being the "catch" of the exhibition, to undertake scientific experiments as to atmospheric conditions.

The Ladies Delighted.

The pleasant effect and the perfect safety with which ladies may use the liquid fruit laxative, Syrup of Figs, under all conditions make it their favorite remedy. It is pleasing to the eye and to the taste, gentle, yet effectual in acting on the kidneys, liver and bowels. .....

With Invalids.

Yes! with invalids the appetite is capricious and needs coaxing, that is just the reason they improve so rapidly under Scott's Emulsion, which is as palatable as cream. .....

DR. MANNING'S GERMAN REMEDY, the greatest rheumatic, neuralgia and pain cure of the age, both internal and external. Price 50 cents.

Dr. Chalmers, Veterinary Surgeon, M. R. C. V. S., says: "I used Dr. Manning's German Remedy for neuralgia. It cured me on first application. I have never used anything to equal it. Have made other uses of it and find it excellent.

THOMAS CHILLMERS, P. V. M. S. R. V. S., ... Truro, N. S., April 9, 1892.

USE SKOLA'S DISCOVERY, the great Blood and Nerve Remedy.

Physicians endorse them, and Physicians make them.

M. D. Waldo, Mo.

I am pleased to recommend

Skoda's Discovery

and Skoda's other remedies, as I know them to be articles of true merit, and the physicians who compound them, to be men of integrity and ability. Skoda's Discovery is unlike any other proprietary medicine—it cures disease by removing the poison, and at the same time SUPPLIES GOOD BLOOD to wasted parts. No other remedy has performed so many wonderful cures or relieved so much suffering.

Skoda's Little Tablets cure constipation, sick headache and dyspepsia. Price—
