

# INTERNATIONAL HARVESTER SYMBOL of PROGRESS on the FARM!

## International B-414

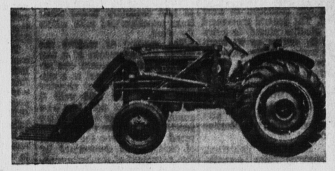

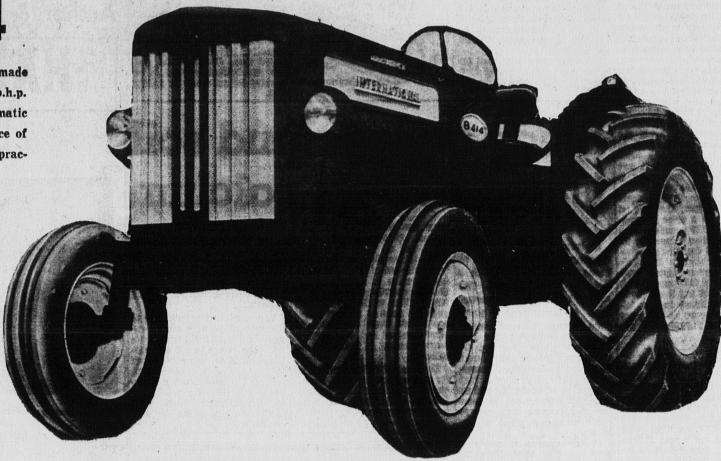

Another British made McCormick-International diesel tractor made virtually everything any farmer could want. There's Big 40 h.p.; ten speed gear-box; new I H "vary-touch" hydraulics—automatic control hydraulic system; disc brakes; differential lock; a choice of p.t.o. speed combinations; distinctive styling plus many sound, productive ideas that make farming more profitable.

Fuel tank capacity 10½ Imperial gallons — in average conditions enough for a full day's work!

Eight forward speeds—plus two reverse. The right speed for every farming need.

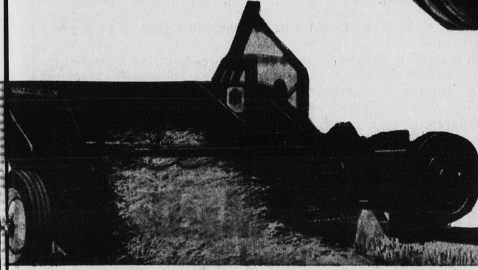

Automotive-type steering for precise ease of control—power steering optional.

Differential lock—of proved I H design!

## MANURE LOADERS

The International 2001 is an all-purpose, standard-duty loader . . . designed and constructed to withstand the stresses and strains of continuous loader operation. You quickly lift loads up to 2000 pounds on this brute-strong outfit.

## Famous No. 46 Baler

SAVINGS IN TIME AND MONEY. Whether you bale only your own hay or do work as well, the extra capacity of the McCormick-International 46 means you'll

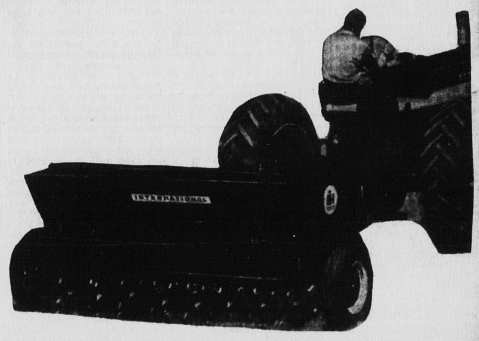

- bale more bales per dollar of investment.
  - bale any crop or any field faster to save time and save fuel.
  - bale more hay at peak quality.
- BETTER HAY. Extra capacity means you can mow and rake extra acres in the state of bloom, and then bale these extra acres in one day with the 46. You bale or crop when it's at the "just right" stage of curing . . . handle it with least-drying loss.

## International Disc No. 10 DRILL SEEDER

- Seed with one-at-a-time accuracy
- Place every seed so it can grow
- Fertilize accurately at all speeds . . . clean in minutes . . . with exclusive drop bottom.

Here's a grain drill that will do your most complex seeding job with a degree of accuracy that will amaze you—the McCormick-International 10.

Sow grain, grasses, legumes, and distribute fertilizer in the same trip. Seed alone or use any combination of three attachments to fit your job. Grain hopper holds 1½ bu. per foot. Fertilizer attachment cleans minute-quick with exclusive hinged bottom; hopper holds 53 lbs. per foot. Neoprene tubes are used for grain, seed, and fertilizer delivery—can't corrode, last almost indefinitely.

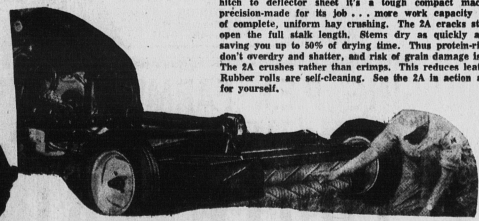

## International HAY CONDITIONER

Reduced Curing Time—Makes Better Hay

Rugged simplicity describes the 2A Hay Conditioner. From hitch to deflector sheet it's a tough compact machine . . . precision-made for its job . . . more work capacity for years of complete, uniform hay crushing. The 2A cracks stems wide open the full stalk length. Stems dry as quickly as leaves, saving you up to 50% of drying time. Thus protein-rich leaves don't overdry and shatter, and risk of grain damage is reduced. The 2A crushes rather than crimps. This reduces leaf damage. Rubber rolls are self-cleaning. See the 2A in action and judge for yourself.

## International FERTILIZER SPREADER

McCormick-International 7 fertilizer distributor, available in 8, 10, and 12-foot widths can handle practically any spreadable dry material in pellet, lump, or powder form. Agitators move material to feed wheels which perform a wiping-action to keep distribution holes open. Control slide, hopper bottom, feed wheel shaft and lid can be removed easily for cleaning.

## International MANURE SPREADER

Whether your requirements are average or large, there's an Extra-Duty spreader to handle your year-round needs. Five models—75 and 100-bushel ground drive and 100, 125 and 150 bushel p.t.o.—give you a choice to match preference and tractor power. Each model is available with spiral or padded-type wide-spreads. Paddles are heavy 11-gauge steel

. . . need no forming for extra strength . . . hold securely to brackets welded to the shaft . . . are individually replaceable. There are no pins through the shaft to weaken and wear. The spiral wide-spread is securely welded to a husky tube . . . provides rigid unit construction. Heavy-gauge spirals are proved practically damage proof . . . take frozen manure, even rocks in stride.
