

ACROSS THE ISLAND Gas Pare Strain Competing Exhibition

PEOPLE have seen a new tractor this year on the farm of Emmett Power, Greenfield which is in the heart of the tobacco county. But the most interesting part of the show was the machine which was a 24, of Cleveland. I visited Donnie a few weeks ago when he was still working as the harvester, and was deeply impressed with the highly skilled work of this young man. He was in the show with a set-but not yet worked, with very little to work with except his own unusual ability, and imaginative mechanical genius. The machine was sitting on the floor in the kitchen, putting a new set of points in his "Go Kart" engine when I dropped in on him. The young inventor and builder is also a "Kart" enthusiast. Donnie said that he was the only one who had ever done this. Last time I looked, he was at the top of the pack with the highest individual points.

IYAN KERRY, representative of a nationally known feed company here, gave me the tip on Mr. Allen's work. He built a harvester for his own work last year, and this year he has improved it, as he built the machine for the Greenfield farm. Donnie has never had any technical vocational training, but he talks like an experienced expert and has shown me various parts of the machine. I changed the elevation here or "altered the level or angle" somewhere else, and he had the logical explanation why the changes would result in better service in the potato field, and that's the reason for building this type of machine in the first place.

IT IS QUINDED to look to the likeable young Covehead man, that I almost had to force myself to realize that he was improving on the type of equipment built by his father. It is not likely that he will be doing this along with other personnel, working in the best equipped factories.

I'm purposely staying away from technical details, but this type of machine does not do potato harvesting. It cost the Allen's between one dollar and two dollars per acre for labor cost last year for example. It takes from two to four hours a machine, depending on whether the potato field is clean or dirty.

Harvesters Are Becoming Popular

IT'S ONLY a year or two since the first factory built harvester was brought here, but there are many of them now. I'm sure that most of the growers who have bought them are happy. Mr. Allen told me he's definitely not true; not, he added, unless the equipment is driven too fast. They should be able to handle four to four and a half acres a day. They use a 25-horsepower engine mounted on the machine he built for their own farm, but Donnie built a power-take-off for the tractor. A 40-horsepower tractor will handle it, he told me. Donnie also showed me a four-row potato planter they've built. It's the James Watson model, and it's the one he sold me. It requires four men, one for each row, and one to tend the spuds, one at a time, into funnel shaped receptacles because they plant the spuds in a row. The machine is built to handle the tuber on the same tuber right alongside, and pull them, too. There's nothing new about the tuber-planting device. This is the first machine I've seen that turns out a row in the field.

V-8 Engine in Motorcycle

I ASKED Donnie to show me the motorcycle into which he built the V-8 car motor, and again I had to thank Mr. Kerry for the tip. The motor is three alright, but it's not the one that was built by the inventor, said the young man who was just too busy with building harvesters, and other responsibilities to work on the motor himself at the time. Mr. Kerry said that he had heard about it in Toronto earlier this year, but none of them would believe such a thing could be done. But that's understandable. They've never met and talked to Donnie. It's a masterpiece.

Non-Poisonous Top Killers

SPEAKING of potatoes reminds me of potato top killers, and the large number of cattle poisoned last year by the arsenic mixtures. Some people charge that at least some of the cattle died are due to carelessness, that the cattle were not fenced securely, or that gates were left open, etc. I visited the farm of a registered Holsteins cow, a full sister to Wislagway King Lisa that was the senior and grand Holstein female champion in the world. She was bred to a young man who was a registered Holsteins cow, a full sister to Wislagway King Lisa that was the senior and grand Holstein female champion in the world. She was bred to a young man who was a registered Holsteins cow, a full sister to Wislagway King Lisa that was the senior and grand Holstein female champion in the world. She was bred to a young man who was a registered Holsteins cow, a full sister to Wislagway King Lisa that was the senior and grand Holstein female champion in the world.

Bob Simmons Aims At Tokyo

LAST SATURDAY I watched Bob Simmons throw a Discus 147 feet 10 inches, and that's farther than a Marlinne man had ever thrown before in competition. I'm interested in the Discus because I've seen many people throw it, but I've never seen one thrown by a Marlinne man. I've seen many people throw it, but I've never seen one thrown by a Marlinne man. I've seen many people throw it, but I've never seen one thrown by a Marlinne man. I've seen many people throw it, but I've never seen one thrown by a Marlinne man.

Alfred Groom On Empire Team

IT WAS a tremendous thrill to learn that Summerside's Alfred Groom was named the British Empire Games team when he cracked the Canadian record in the Pole vaulting event. He had a long career in the sport, and he was one of the best pole vaulters in the world. He was named to the team because of his performance in the Empire Games. He was named to the team because of his performance in the Empire Games. He was named to the team because of his performance in the Empire Games.

Angus Cartmear Are Active

I RECALL writing a story last fall, or early in the winter, that Angus Cartmear were the fastest growing breed on the island. They were bred by Angus Cartmear, and they were bred by Angus Cartmear. They were bred by Angus Cartmear, and they were bred by Angus Cartmear. They were bred by Angus Cartmear, and they were bred by Angus Cartmear. They were bred by Angus Cartmear, and they were bred by Angus Cartmear.

LIVESTOCK

MONTREAL (CP)—Cattle hogs receipts this week were 1,860, 1,600 and 1,500 head. Sheep receipts were 25,000, 25,000 and 25,000 head. Poultry receipts were 1,000, 1,000 and 1,000 head. Horses receipts were 100, 100 and 100 head. Swine receipts were 1,000, 1,000 and 1,000 head. Cattle receipts were 1,000, 1,000 and 1,000 head. Sheep receipts were 1,000, 1,000 and 1,000 head. Poultry receipts were 1,000, 1,000 and 1,000 head. Horses receipts were 100, 100 and 100 head. Swine receipts were 1,000, 1,000 and 1,000 head.

(Continued from page 1)
in its administration does not give women the same status as men. All but four of the 26 dioceses in Canada, elect no women delegates to its general synods. Only Nova Scotia, Toronto, Yukon and California dioceses in western British Columbia include women in their regional synods.

Mrs. J. H. Whyard of Whitehorse in the Yukon is the only woman to have been elected delegate to the general synod in Kingston. START CHANGE The diocese also took a step away from an attitude of discrimination towards women by electing Mrs. Whyard to the synod in 1961 and 1960 when perfect weeks followed each other on a continuous basis. The fine weather is welcome for a variety of reasons. It will put lingering tourists in a better frame of mind, fall harvesters will have a more successful season, and the weather will be more favorable for the planting of the crop. The weather will be more favorable for the planting of the crop. The weather will be more favorable for the planting of the crop.

The 31st synod completed an inventory list of 86 items, including key pronouncements on church unity, education, church growth, and social action. Synod approved a resolution on relations with the United Protestant Church of South India, which bars full recognition until the church in that country has accepted the doctrine on marriage, which bars full recognition until the church in that country has accepted the doctrine on marriage, which bars full recognition until the church in that country has accepted the doctrine on marriage.

On education, synod approved a policy statement holding that the church should be a center of learning and a place where the young are trained in the faith. The church should be a center of learning and a place where the young are trained in the faith. The church should be a center of learning and a place where the young are trained in the faith. The church should be a center of learning and a place where the young are trained in the faith.

Proposals on church organization were approved at the session. The session also heard reports from the various dioceses. The session also heard reports from the various dioceses. The session also heard reports from the various dioceses. The session also heard reports from the various dioceses. The session also heard reports from the various dioceses.

Provinces Fair Princess
Competing Exhibition
The last week of August has given latest recognition to the fact that summer is officially over. Very few of the 800,000 spectators applied either to the ground or to the hay will make it. The damage from water and a high speed wafering process will, without need of any curing, produce highly palatable oversized pills of green fodder.

Now, although the labour cost per unit of production went down in 1961 and 1962, that means of course, that productivity went up and it went up as much as 25 per cent in one of these keys in 1962. The weather is welcome for a variety of reasons. It will put lingering tourists in a better frame of mind, fall harvesters will have a more successful season, and the weather will be more favorable for the planting of the crop. The weather will be more favorable for the planting of the crop. The weather will be more favorable for the planting of the crop.

IS IT LABOUR?

A conclusive answer to the frequent charge that Canada's difficulties are being held due to our lack of labour is being held due to our lack of labour. The weather is welcome for a variety of reasons. It will put lingering tourists in a better frame of mind, fall harvesters will have a more successful season, and the weather will be more favorable for the planting of the crop. The weather will be more favorable for the planting of the crop. The weather will be more favorable for the planting of the crop.

Mr. and Mrs. John M. Perry left recently for the United States where they will be spending the West Brook, Maine, and Lawrence, Mass. Mrs. Perry has returned to her home in Windsor, after visiting her parents. Mr. and Mrs. Perry are accompanied by their children and other members of her family.

Mr. and Mrs. Henry Wedge and two grandchildren of Albany, N. Y., and Mr. P. H. Wedge of Wallham, Mass., are visiting their mother, Mrs. Joseph Wedge, also Mr. and Mrs. Charles Wedge and family. Mrs. Sylvia Peters left recently for a visit in the United States.

Miss Sherry Marchand is visiting in Halifax, N.S. Miss Judy Marchand is spending some time at the home of Mr. and Mrs. Clarence Tool in Charlottetown. Mrs. Robert Austin and granddaughter of Lunenburg, Maine are visiting friends and relatives in St. Louis.

Mr. Claude Perry and six children of Moncton, N.B. are visiting at the home of Mr. and Mrs. Ferdinand Brown. Visiting at the home of Mr. and Mrs. Camille Perry are Mrs. Maudie Hall and Mr. and Mrs. Charles Perry. Mrs. Perry is visiting with Mrs. Maudie Hall and Mr. and Mrs. Charles Perry.

Mr. John P. Gaudet of Moncton is visiting with members of his family in St. Louis. The path of least resistance. In so far as possible we should try to get stromium out of the body. The problem is this vital area of research has been to get the stromium out without killing the patient. If the kidneys were used to excrete the stromium, so much bone-building calcium would go out along with it that the patient would die within a few days.

ELMSDALE

Recent visitors to the Dunham home include: Mr. and Mrs. Frank Dunn, Marina and Fred. Mrs. Roger Lakin and Mrs. French of Summerside. Reverend Willard O'Brien, of Victoria, B.C., left by plane of Tuesday after spending his holidays with his mother, Mrs. D. O'Brien, and Mr. and Mrs. Horace O'Brien.

Scientific Finds Way to New Use
The technique, developed experimentally on cats and mice, was to have the radioactive material secreted in saliva and sweat. Dr. Setala, professor of pathology at the University of Helsinki, reported it at the International Congress of Radiology, Stromium, occurring in both natural and man-made fallout, lodges in the bones. Dr. Setala said it is necessary to get stromium out of the body because it cannot be changed or rendered harmless within the body. The problem is this vital area of research has been to get the stromium out without killing the patient.
