Patent Lactal or Artificial Breast. THIS article is intended to take the place of the common Nursing Bottle, to which there are many objections, as mothers and nurses are well aware. With most children, there is usually great difficulty in teaching them the use of the bottle, and with many it is altogether impracticable. The Lactal, by its peculiar form and adaptation, enables the child to feed in the natural position, thus inducing it to think that it derives its nourishment from the mother. Besides being preferable as to form and convenience of application, it combines the utility of all kinds of nurse bottles now in use, for the mouth of the Lactal can be fitted with a cork, and the common ivory or silver tube. —ALSO—
