Scientific Miscellany.

WORK OF THE SPECTROSCOPE.—In his recent address as President of the British Association for the Advancement of Science, Dr. Wm. Huggins said that it is now some thirty years since the spectroscope gave us for the first time certain knowledge of the nature of the heavenly bodies, and revealed the fundamental fact that terrestrial matter is not peculiar to the solar system, but is common to all the stars visible to us. This instrument has in this time analyzed the stars, though it has thus far failed to interpret the remarkable spectrum of the Aurora Borealis, and to teach much of the physical and chemical nature of the sun's corona. It has shown reasons for arranging the stars in a series in which the different temperatures seem to be indicated and to denote different stages of evolution, our sun occupying a place near the middle of the series. It has given us a means of determining that some stars are approaching and some receding in the line of sight, and of measuring the rate, though the nearest star is so remote that its approach at the rate of 100 miles per second would not increase its light one-fortieth in a century. The motions of about fifty stars have been thus determined with an accuracy of about an English mile per second. Indeed, a number of measures of the star Arcturus have been made by Keeler with a variation of not more than six-tenths of a mile a second, these being determinations of the motion of a remote sun by means of light-waves which have been nearly two hundred years upon their journey. Nebulæ have been seen to move at about the same rate as the stars—from two to twenty-seven miles per second, and in one case nearly forty miles. Photography, which has rendered wonderful help to the astronomer in other ways, has aided in these researches.

DISAPPEARANCE OF BIRDS.—Attention has been called to the serious diminution of birds in France through destruction of the nests. Some insectivorous species are becoming very rare, while plant parasites are increasing. Cats and boys are the chief destroyers, and it is suggested that the boys be punished by law, that the keeping of cats be made illegal, and that prizes be offered for killing animals that prey on eggs.

TEMPERATURE EXTREMES.—In Wercholansk, East Siberia, the coldest place known on earth, the temperature ranges in January from 24° to 80° below zero, and in July from from 40° to 86° above, the mean for December, January and February being 55° below zero. The climatic conditions, says Dr. W. J. Van Bebber, are very high atmospheric pressure in winter, with calm air and a clear sky—conditions which favor radiation. A search for the hottest region shows that the belt of highest temperature passes through southeastern Asia, the interior of north Africa, Arizona, and the centre of Australia. The characteristic climatic feature of this tropic belt is a high and equable temperature with dense humidity of the atmosphere. The highest annual mean temperature known is on the southern coast of the Red Sea. The range of the mean temperature at Massowah is from 78° to 79° in January and February to 95° to 96° in July and August, with an annual mean of 86° and a daily variation of 10° to 12°. These figures do not appear excessive. The highest mean temperature is occasionally exceeded in other regions, but the continuous, nearly uniform high temperature renders it almost unendurable for Europeans.

CHEAPER QUININE.—The new artificial quinine, produced by Messrs. Grimaux and Arnaud, of Paris, is mentioned as one of the great discoveries of the year. It is obtained by treating the base cuprein of a Brazilian shrub with sodium, then treating the resulting compound with chloride of methyl. The product is quinine absolutely identical with the substance that has become so familiar and so indispensable.

ELECTRO-MAGNETIC DISCOVERIES.—In the progress of electro-magnetic science, according to Prof. A. E. Kennelly, these facts seem to have been fully established: 1 The great achievement since Faraday's time has been the determination that all electricity flows, or tends to, in closed curves or circuits, so that we have the electrostatic circuit, the galvanic circuit, and the magnetic circuit, each resembling, as it were, an endless chain or a bundle of endless chains; and the laws which control these three different types of circuit show wonderful analogies. 2 The due appreciation of the influence of the ether and its importance in all electro-magnetic phenomena. While originally the electrical activity seemed to be confined to the battery or conducting wires of a galvanic circuit, it is now believed that the ether surrounding these conductors plays fully as active a part in the process of conduction and the mind sees free space no longer void, but filled with an active and responsive substance—the ether. It looks almost as if matter were inert in comparison with the ether. 3. The evidence in favor of the proposition that light is a vibratory disturbance in the ether of an electro-magnetic character is such as almost to amount to demonstration. When this shall be generally accepted, the whole domain of optics and radient energy will be enrolled as one department and property of electro-magnetic physics.

ELECTRIC SAW REPAIRING.—A considerable saving in repairing saws is to be credited to the new process of electric welding. It was formerly necessary to cut down to a smaller size any saw from which a tooth had been broken, but it is now only necessary to fit in a new tooth and secure it in place by electric welding. A drop of oil restores the temper. The joint in continuous band saws is also made by this process.

In Oldenburg, a fall of temperature from 37 deg. above zero to 22 deg. below is reported to have occurred in 20 minutes on Nov. 19, 1890. A heavy rain preceded the change. Some 30 kirghises, who were returning to Oldenburg, were drenched with the rain, then frozen on their horses.

The Ameeer of Afghanistan has assumed a very defiant attitude towards the Indian Government.

Does She Talk With Animals?

THE REMARKABLE POWERS OF A PRETTY KENTUCKY GIRL.

Alice Sunderland is an unusually pretty country girl residing with her father on a farm several miles from Greenup, Ky. The girl is well educated, and has been a wonder to her friends for several years. She speaks to animals in an unknown tongue and they obey her implicitly, even against the commands and blows of their owners. She also foretells hours ahead, just where and how many animals will be found at certain spots and what they will do.

Saturday she gave a public test of her power. She said five yoke of oxen would be found on Spalding Hill at a certain house. She described minutely what the animals and driver would do at her approach. It came about as she predicted. She then described a pasture some distance away, and said that under a certain tree were seven cows, which would approach when she came in sight and all give down their milk without being touched. The fluid came out in streams, but no one touched them. At her command they returned to their grazing. Many other wonderful things are told of her.

News Notes.

Count Sweinitz, commander of the German expedition into East Africa, was seriously wounded in an attack on Quinkoso. The revolt of natives against the Germans is still spreading.

During the recent British elections the votes polled in the London constituencies were 397,000, of which the Unionists obtained 211,547, and the Gladstonians 185,463. There were, however, four Unionists unopposed. Using in these cases the figures of previous elections, we get a total Unionist vote of 228,933 and a total Gladstonian vote of 191,012. The majority is large, but it must be remembered that the Gladstonians were formerly in a helpless minority in the metropolis, while they now elect 25 out of 62 members, and poll five-sixths as many votes as their opponents.

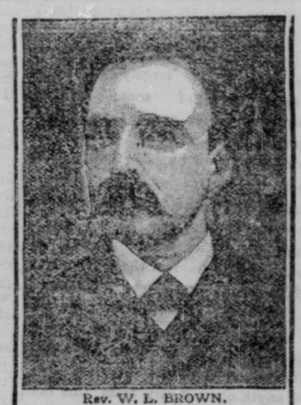
"Strength of character consists of two things—power of will, and power of self-restraint. It requires two things therefore for its existence—strong feelings and a strong command over them. Now, we very often mistake strong feelings for strong character. A man who bears all before him, before whose wild burst of fury the children of the household quake, because he has his own way in all things, we call him a strong man. The truth is he is a weak man; it is his passions that are strong; he, mastered by them is weak. You must measure the strength of a man by the power of the feelings he subdues, not by the power of those that subdue him. And hence composure is the highest result of strength."

The slight increase that has taken place in the population of France during the decade between 1881 and 1891, which is now disclosed by the census, is a subject which is exciting some interest. In 1881 France had 37,672,048 inhabitants; in 1891 it had 38,343 192 inhabitants, and increase of only 672,144 in ten years. In the same period the population of Great Britain and Ireland increased from 35,241,482 to 37,888,153, showing a growth of 2,646,671, or about four times as great an increase as that of France. But these figures, surprising as they are, do not show the whole truth. During the decade between 1881 and 1891 the United Kingdom lost by emigration not less than 1,600,000 persons, that being the difference between the number of those who left the country in that time and those who came into it. On the other hand, the emigration from France during the same period was quite small, aggregating not more than 300,000 for the 10 years, so that the natural increase of population in the British Islands was about five times as great as that of France.

SKODA'S DISCOVERY, the Great German-American Remedy for Heart, Nerves, Liver, Kidneys, Blood. Guarantee contract with every bottle. Pay only for the good you receive. At all Druggists, $1.00 per bottle, six bottles $5.50. If you want to know about SKODA'S REMEDIES, send postal for "Morning Light."

Mrs. Helen Densmore writes from London that Sir Charles Russell, Mr. Poland, Mr. Moulton and several other prominent lawyers have declared that the new evidence obtained in the Maybrick case has convinced them that the evidence given on the trial did not justify the verdict of guilty, by virtue of which Mrs. Maybrick is now serving a life sentence of imprisonment. If Mrs. Densmore's statement is correct, it is a very important one in its bearing upon Mrs Maybrick's chances for pardon. Sir Charles Russell will certainly be a member of Mr. Gladstone's government, and very likely Home Secretary. If he entertains the convictions attributed to him by Mrs. Densmore, he can hardly avoid recommending to the Queen the pardon of the unfortunate prisoner.

TO GAIN the public confidence is essential to business success, and it can only be gained by a steady course of faithful dealing with them. It is by this course that Messrs. Tuckett & Son have secured the great success of their "Myrtle Navy" tobacco. This confidence is not only a source of business to the firm, but also a source of economy which the consumers get the benefit of. The merchant never loses a moment of time in examining the quality of the tobacco. The name fixes the quality as absolutely as the mint stamp fixes the value of the guinea. It is not even necessary for the commercial traveller's trunk to be burdened with a sample of "Myrtle Navy." All his customers know what it is, and know in an instant when it has been supplied. There is no room for any dispute about it. No waste of time or postage in writing complaints about it. These may look look like trifles to the uninitiated, but they save money, and enable merchants to perform the work of distribution at the smallest possible cost. They are part of the reasons why the finest quality of tobacco grown can be sold at so cheap a price. ....



Rev. W. L. BROWN.
THE CONQUEROR HAS COME!
Heart Trouble, Dyspepsia, DIZZINESS, AND Muscular Rheumatism CURED!
REV. W. L. BROWN, FOR YEARS A MEMBER OF THE M. E. CHURCH, BUT FOR THE LAST TEN YEARS AN EVANGELIST IN THE CHURCH OF GOD, HE IS WELL KNOWN BY THOUSANDS WHO WILL VOUCH FOR THE TRUTH OF THE FOLLOWING:
GENTS:—I write to inform you that the TWO COURSES of SKODA'S DISCOVERY and LITTLE TABLETS have done BETTER wonders for me. I can hardly realize THAN it, the change has been so marked.
I contracted the Chronic Diarrhœa in the Army, and since 1865 I have been a constant sufferer. In addition to this, I was troubled as follows: 1st a lame Back and Kidney trouble, 2d, Dyspepsia, 3d, Faintness and an all-gone feeling; 4th, Distress at pit of Stomach; 5th, Headache and Dizziness; 6th, Muscular Rheumatism in Chest so I had to lie in bed for weeks at a time; 7th, a Severe Heart Trouble that would cause my pulse to run at 98 for days at a time. I was treated by very eminent Physicians, but would be compelled to leave my labors and return to my home weeks at a time—in fact I have had 18 fits of sickness in the last 26 years, and several times have been given up to die.
I feel that I am completely cured of all my bodily diseases except the Diarrhœa, which is not cured but greatly benefited, COLD I shall take another course which I think will cure me entirely. Yours with gratitude,
REV. W. L. BROWN.
