

Airmen Give Coast To Coast Rehearsal In France

Record Year For The Navy In Peacetime Development

OTTAWA (CP)—The navy says that its growth in 1954 has been greater than in any single year of its peacetime history.

In a year-end review, the senior service notes that its strength increased by nearly 2,000 officers and men to 18,800, a record in peacetime. Personnel target is about 21,000.

Twenty-five new and converted ships joined the active and reserve fleets during the year. Canadian warships visited more than 30 countries in the course of operational trips and training cruises to all six continents of the world.

There now are 49 ships in commission, an increase of nine over 1953. They comprise an aircraft carrier, two cruisers, 10 destroyers, one Arctic patrol vessel, eight frigates, five coastal escorts, eight coastal minesweepers, an auxiliary coastal minesweeper, a repair ship and 13 small craft. In addition, there are 112 naval auxiliary vessels manned by civilians.

The navy also had another 53 ships in reserve by year-end, 25 of which have been modernized and most of the remainder in process of modernization.

Under construction are an aircraft carrier, 14 destroyer escorts, six coastal minesweepers, eight patrol craft and 32 auxiliary vessels.

Beginning in March, the Royal Navy will base its three-ship Sixth Submarine Squadron at Halifax to provide more training facilities for Canada's anti-submarine navy.

About 200 Canadian sailors, all volunteers, will serve either with the squadron or in other British submarines. First draft of Canadian trainees left for Britain in November.

Navy ships steamed hundreds of thousands of miles during the year.

Probably the most noteworthy cruise was the Arctic patrol vessel Labrador's historic voyage through the Northwest passage and her subsequent circumnavigation of North America—the first warship to accomplish either feat.

The destroyer Haida became the first Canadian warship to circle the globe twice when she returned to Canada from Korea in November. A dozen Canadian warships participated in three major NATO exercises in 1954 in the North Atlantic.

In an overhaul of its air arm, the navy is buying 100 Canadian-manufactured Grumman S2F planes to replace the Avenger anti-submarine aircraft now in use. The navy has also arranged to purchase from the United States Navy some 30 Banshee jets to replace its carrier-based Sea Fury fighters.

Formation of a second utility squadron at Patricia Bay, B. C., early in November increased to eight the number of active naval squadrons. Number of reserve squadrons rose to five with formation of two units, one at Calgary, the other at Quebec City.

In line with a decision by Commonwealth nations to reduce their armed forces in Korea by two-thirds, the navy late in the year withdrew two of three destroyers, leaving only the Sioux. Eight Canadian destroyers and about 5,000 officers and men have served in the Korean theatre.

Highlight of the year's training expansion was the opening of the new junior officers' training establishment, HMCS Venture, at Esquimalt, B.C., where some 160 cadets began their two-year course in September.

Campaign Against Yugoslav Red Leader Is Warming Up

By JOHN EARLE

BELGRADE (Reuters)—Rebel Yugoslav Communist leader Vladimir Dedjic, 47, is being held in a New Year's tree home for his five children Wednesday while the government prepared for his trial on a charge of spreading hostile propaganda.

The husky six-footer was seen on a busy Belgrade street, accompanied by his blonde Slovene wife as he carried the tree. Communists in Yugoslavia have their big holiday in New Year's Day instead of Dec. 25.

The campaign against Dedjic, President Tito's wartime friend and his official biographer, warmed up Wednesday. He was expelled from the Serbian Journalists' Association and from the Yugoslav Association for International Law, and his constituents at Pancevo, market town north of Belgrade, have held a demonstration against him.

Dedjic still is nominally a member of parliament, but his immunity was lifted Tuesday to allow the public prosecutor to charge him with spreading hostile propaganda under Article 118 of the Criminal Code, a charge that could mean a long stretch in prison at hard labor.

Mystery arose as to whether Dedjic was under any form of arrest. The security police cordoned off his suburban villa Tuesday to prevent him from holding an announced press conference.

Report Wild Life, Hunters Killed In Average Numbers

By THE CANADIAN PRESS

Wild life and human beings were killed in average numbers during fall and early winter hunting season in Canada.

Provincial authorities still are compiling reports on the season which continues into early 1955 in some parts of the Dominion, but a Canadian Press survey indicates a normal bag of animals and birds and only slightly fewer human fatalities than in 1953.

Incomplete figures from fish and game departments, police and press accounts show 47 persons were killed so far this season. This compares with more complete figures of 70 the previous year and the total is certain to mount when the final reckoning is made.

There are no figures for Prince Edward Island where hunting is negligible.

In Quebec, where 90,879 hunting licences were issued in 1954 compared with 82,974 last year, more game was shot, although final figures are not available. It is estimated that 1,500 moose were killed and the season may be shortened next year to reduce the number.

The deer bag was heavy, too, with many poachers operating. Some 350 persons were arrested for hunting at night with lights and have been, or will be, prosecuted for this illegal "jacking".

Ontario lands and forests officials have not yet completed their survey but say reports indicate that hunters had fair success except for grouse.

Manitoba authorities declined to estimate the amount of game shot, but Saskatchewan reported generally excellent hunting.

There is a closed season on deer and moose in Alberta and figures on other game are not yet available.

While full reports are awaited from British Columbia, figures indicate variety of game was shot in the province.

Licenses for moose and caribou still are being issued in Newfoundland where the season continues to Dec. 31 in some parts and to Jan. 15 in others. Partridge and duck shooting was on a par with other post-war years.

Nova Scotia hunters shot 43,000 deer in 1953 and the 1954 total is expected to be about the same. New Brunswick, too, is believed to have had an average year which would mean a kill of about 20,000 deer, 22,000 ducks and 450 pheasants. Moose hunting is banned in both provinces.

There are no figures for Prince Edward Island where hunting is negligible.
