ARCTIC AND ANTARCTIC. CURIOUS DIFFERENCE BETWEEN THESE INTERESTING REGIONS.

The Polar Basin—Some Curious Scientific Facts Respecting It—The Vast Area of the Polar Sea—The Great Glaciers of Alaska.

There is, said Henry Seebohm to the British Association lately, only one polar basin; the relative distribution of land and water and the geographical distribution of light and heat in the arctic region are strikingly unique. In no other part of the world is a similar climate to be found.

The distribution of land and water round the South Pole is almost the converse of that around the North Pole. In the one we have a mountain of snow and ice covering a lofty mass of continental water surrounded by an ocean stretching away to the horizon.

In the other we have a basin of water surrounding a comparatively small mass of land, some of which is probably permanent (the so-called palaeo-eretic sea), but most of which is driven hither and thither in summer by winds and currents.

The polar basin is a vast area of water, the area drained by all rivers flowing into the Arctic Sea, may be roughly estimated to contain about 14,000,000 square miles, of which half is land and half water.

In the oldest part of the basin the land is either glacier or tundra, and in the warmer parts it is either forest or steppe.

Greenland, the home of the glacier and the motor of the icebergs of the Northern Atlantic, rises 9,000 or 10,000 feet above the sea level, while the sea between that lofty plateau and Scandinavia is the deepest known in the polar basin.

Separated from the rest of the Atlantic by a broad belt or submarine plateau connecting Greenland across Iceland and the Feroes with the British Islands and Norway.

Icebergs from the northern part of the basin of the Arctic Sea, are carried southward by the Gulf Stream, and are seen in the English Channel and the Bay of Biscay.

Icebergs from the southern part of the basin are carried northward by the Labrador Current, and are seen in the Gulf of St. Lawrence and the Bay of Fundy.

Icebergs from the eastern part of the basin are carried westward by the Labrador Current, and are seen in the Gulf of St. Lawrence and the Bay of Fundy.

Icebergs from the western part of the basin are carried eastward by the Gulf Stream, and are seen in the English Channel and the Bay of Biscay.

Broken in Health

That Tired Feeling, Constipation and Pain in the Back Appetite and Health Restored by Hood's Sarsaparilla.

Mr. Chas. Steele, St. Catherine's, Ont. "For a number of years I have been troubled with a general tired feeling, shortness of breath, pain in the back, and constipation. I could get only little rest at night on account of the pain and had no appetite whatever. I was that tired in my limbs that I gave out before half the day was gone. I tried a great number of medicines but did not get any permanent relief from any source until, upon recommendation of a friend, I purchased a bottle of Hood's Sarsaparilla, which made me feel better at once. I have continued its use, having taken three bottles, and I feel like a new man. I have a good appetite, feel as strong as ever I did, and enjoy perfect rest at night. I have much pleasure in recommending Hood's Sarsaparilla. CHAS. STEELE, with Eric's Advertising Co., St. Catherine's, Ontario.

HOW PLEASANT

It is to see an aged person with an elastic step, a bright smile and a kind word, and hear the child with its merry laughter ringing in our ears; these denote good health, which can be found in Skoda's Discovery.

Skoda's Discovery.

Mr. Chas. Libby, of Auburn, Me., says: "My little girl, Josephine, had congestion of the lungs, which left her very nervous and weak. She also had a humor break over her body; after giving her a bottle of Skoda's Discovery and using a tube of Skoda's Ointment, the humor entirely left her. She is now well and strong."
