Strange But True

On the veranda of the Century Club in Panama one can see the sun rise in the Pacific Ocean and set in the Atlantic! Of course you'd have to stay up all night to witness this phenomenon but it would be worth it. When you eat gelatine you consume a substance found in the bones of animals which, when dissolved, turns into a sort of jelly. The first iron bridges fabricated in Canada were built at Dartmouth, Nova Scotia in 1877.

It only takes one quarter of a second to make a round-the-world telephone call, half the velocity of light. The first call westward was practically instantaneous. The answering voice in the two-way mirror sped in opposite direction. The message went from New York at 9:30 A.M. Thursday. It was 8:30 A.M. on the Pacific Coast. At the Pacific International Date Line the voices went from Thursday to Friday and back again today.

The problem was PAIN The answer is DISPRIN. For 50 years we have used little white tablets—acetylsalicylic acid—for relief of pain. Today this familiar pain-killer is available in a new form without the disadvantages of acidity, insolubility and bitter taste. It is called DISPRIN and is sold at druggists everywhere. DISPRIN is soluble and substantially neutral. When taken in water as recommended, it enters the stomach as a true solution and not as undissolved particles. It is therefore less liable to cause stomach discomfort. DISPRIN is readily absorbed.
