PUBLIC AUCTION! TO be sold by public Auction on Saturday the twenty-first (21st) day of August A. D. 1875, at the hour of twelve o'clock, noon, at the Provincial Building, Charlottetown, under the authority of the Hon. the Attorney General, a certain parcel of land, situated in the Parish of St. John, containing an acre and a half, bounded as follows: On the north by Common lot number twenty-four, on the south by the north street of Charlottetown, on the east by the north street of Charlottetown, and on the west by the north street of Charlottetown, and also all that other tract of land, situated in the Parish of St. John, containing an acre and a half, bounded as follows: On the north by Common lot number twenty-four, on the south by the north street of Charlottetown, on the east by the north street of Charlottetown, and on the west by the north street of Charlottetown, and also all that other tract of land, situated in the Parish of St. John, containing an acre and a half, bounded as follows: On the north by Common lot number twenty-four, on the south by the north street of Charlottetown, on the east by the north street of Charlottetown, and on the west by the north street of Charlottetown.

HOUSEHOLD HINTS. To harden wooden putty, boil it for about eight minutes in olive oil. When it is not convenient to take a lock apart to fit a new key, the key blank should be smoked over a candle, inserted in the keyhole, and pressed firmly against the wards of the lock. The indentations in the smoked portion made by the wards will show where to file.

LOOKING GLASSES.—Looking glasses are sometimes spoiled by sunshine. A writer on the subject says: "The amalgam of tin foil with mercury, which is spread on glass plates, is very easily crystallized by solar rays. A mirror hung where the sun can shine on it takes a granulated appearance familiar to housekeepers, though they may not be acquainted with the cause of the defect. In such a state the article is nearly worthless, the continuity of the surface is destroyed, and it will not reflect outlines with any approach to precision. THE PRESERVATION OF SMOKEE KEYS.—Professor Newber says that the best qualities of smoked meat do not depend upon the amount of smoking, but upon the uniformity and proper drying of the meat. It is of considerable advantage also to roll the meat in sawdust or bran. By this means the crust formed in smoking will not be so thick; and, in moisture condensation, the meat is dried, and the bran, the brown coloring matter of the smoke not penetrating. The best place to keep the meat is in a smoke-house, in which it remains without drying, and is ready for use when hung in a chimney. WASHING.—Washersmen spoil every thing with soda, and nothing is more frequent than to see the delicate tints of lawns and pretentious muslins black blotches and smudges. It is worth while for ladies to pay attention to this, and insist upon having their summer dresses washed according to the directions which they should be prepared to give their laundresses themselves. In the first place the water should be tepid, the soap should not be allowed to touch the fabric, it should be washed and rinsed quickly, turned upon the wrong side, and hung in the shade to dry, and when starched (in this boiler but not starched) should be laid flat on a clean surface, and allowed to dry on the wrong side as soon as possible. WHAT IT DOES.—Slight derangement of the digestive or other functions is often sufficient to cause a temporary delirium in children, beginning during sleep and prolonged after waking. The suffering is great, and the condition an alarming one to parents and friends. The mental excitement is so intense as to resist impressions from without to an extent that is almost insupportable. The association of smells can be used more effectively than others to break up the morbid train. A good whiff of cologne almost always brings the little sufferer back to the ordinary world; and little ammonia may be used. But an odor which is agreeable is probably more effective than one which is merely pungent. It is a common observation that the associations are awakened by odors more than by the impressions of any other sense. In the case of nightmare, the strong, familiar smell seems to break up the train of abnormal mental excitement.
