

Odds and Ends.

HINTS FOR HORSE DEALERS.

Tompkins bought a fine horse—paid \$500 for him. The horse after a few months, proved to be lame in the right shoulder. Tompkins was distressed about it. Tried all sorts of remedies—embrocations, liniments, Mustang included, under the advice of the best veterinarians, still the lameness was obstinate and grew rather worse. He became desperate, and bit upon this device to sell the horse. He drove an ugly ten-penny nail plump in the right fore-foot and then left it there for ten days, then he led the tortured animal limping to a neighbouring blacksmith to be shod. The blacksmith was a dealer in horses, and quite a jockey in his way. After a while, Tompkins called at the shop for his horse.

"That's a splendid getting of yours, Mr. Tompkins—pity he's lame," says the blacksmith. "He is, indeed," replied Tompkins. "but he is lame, and I am afraid he can't be cured."

"Perhaps not, and may be he can," says Vulcan. "How much would you be willing to take for him, just as he stands, Mr. Tompkins, money down?"

"Ah, well, I don't know what to say about that. If he is cured, he is worth all I paid for him, and even much more, as horses go now, but if his lameness should continue he is worth nothing. The blacksmith began to chaffer. First he offered \$50, then \$100, and at last \$200 for the animal. Tompkins was persuaded and accepted the last offer. The money was paid and the horse delivered on the spot.

"Now," says the blacksmith, "as the bargain is finished, I will be frank with you, Mr. Tompkins. I can tell you exactly what ailed the horse."

"Can you?" says Tompkins, "well" I shall be glad to hear it. I thought you knew all about it, or you would not have paid me so much money for him."

The blacksmith produced the nail and assured Tompkins, with great apparent satisfaction, that while paring down the horse's hoofs, he had found a long piece of iron, and drawn it out of the near fore-foot.

"Is that all you know about it?" asked Tompkins. "All!" replied the blacksmith, "all isn't that enough?"

"Well," replied Tompkins, "I don't know as it is. I will be equally frank with you since the bargain is finished. I drove that nail into the foot, but the lameness is in the shoulder, I think you will find."

An Irishman being asked to define hard drink, said, "It is sitting on a rock and sipping cold water."

A distinguished visitor once entered the counting room of the late Baron Rothschild, who was very much engaged. Without looking up, he said, "Take a chair and be seated." The gentleman addressed feeling aggrieved at such a reception remarked, "You did not perhaps hear my name, I am the Count—"

"Oh, yes," replied the banker; "take two chairs, if you please."

Agriculture.

GRINDING FEED.

Experimental farmers have long urged the importance, and even necessity, of chopping or grinding hay, as well as other food, for cattle and horses. The lazy drones have had a hearty laugh over the idea, and called it "book farming."

Now, the theory of chopping and grinding food is based on principle which lies at the foundation of animal physiology. Rest is essential to the accumulation of muscle, as well as fat. If we wish to increase an animal in flesh or fat, we do not work him.

Now, a cow wants one-third of her own weight in hay a day, to keep her in good order; and we may thus calculate the amount of labour required to masticate the food, and fit it for the stomach. The labour of chopping or grinding 25 pounds of dry hay a day, is no small item. This excessive labour is performed by one set of muscles—the jaws; but by sympathy, affects all the other muscles; causes the blood to circulate quicker, the breath faster, the consumption of food greater; and still the growth of the animal is retarded.

If a machine was invented to grind hay, the ground article would approximate in value to unground oats, in producing fat and muscle. Chopping hay and stalks is valuable just in proportion as it approximates to grinding, and relieves the animal of the labour of grinding it. An animal fed on ground or minced food, may perform an amount of labour equal to grinding it fit for digestion, and fat as fast as another which does not labour, but grinds its own food.—Working Farmer.

CURE FOR RINGBONE.—A correspondent of the Rural New Yorker says he has known a horse that went for twelve months on three legs from ringbone, made perfectly sound by the application, once a day, of an ointment composed of half an ounce of red precipitate, half an ounce of bluestone, half a pint of turpentine, thoroughly mixed. Keep the hoof greased.—American Stock Journal.

READING FOR FARMER'S BOYS.—An intelligent and thrifty farmer says: "But for the co-operation of my boys, I should have failed. I worked hard and so did they. The eldest is near twenty-one, and other boys in the neighbourhood, younger, have left their parents; mine have stuck to me when I most needed their services. I attribute this result to the fact that I have tried to make home pleasant for them. I have furnished them with attractive and useful reading; and when night comes and the days labor ended, instead of running with the other boys to the railway station and adjoining towns, they gather around the great lamp, and become absorbed in their books and papers."

Take the Journal for the Boys.

NEW FALL & WINTER GOODS!

The Subscriber has now open, And Ready for Inspection, a Carefully Selected Stock of FALL and Winter GOODS, which he offers as Cheap as any in the Market.

INK. INK. INK.

CARTER'S

Combined Writing & Copying INK!

THIS COMBINATION INK has been awarded the highest premiums over all others in the United States, and pronounced by the most celebrated Chemists the best ink ever offered to the public.

It is used by many of the largest Commercial houses, Banks, Railroads, and other Corporations, and gives perfect satisfaction.

The Advantages of this over other Inks, are: FIRST.—It flows freely from the pen, and does not thicken by exposure to the air.

SECOND.—It will give a perfect and instantaneous copy.

THIRD.—It will not mould.

FOURTH.—Being equally as good for copy as for book-keeping, it entirely does away with the use of two kinds of ink.

FIFTH.—It is more permanent than common Inks.

SIXTH.—The color, when first written, is a beautiful dark green, but in a remarkably short time it changes to a brilliant jet black—not a brownish black.

SEVENTH.—It is admirably adapted to the most delicate writing, and always "makes its mark."

The Ink is warranted to flow as freely as any other writing fluid now in use; to give as perfect a copy as any copying ink; and not to mould.

This Ink is for sale at HARVIE'S BOOKSTORE, Queen Street, Ch'town, Nov. 4, '68.

Established 1845.

NEW YORK LIFE INSURANCE COMPANY.

Assets, January 1st, 1868, Over Ten Million Dollars!

PRESIDENT: MORRIS FRANKLIN, ESQ., Vice President and Actuary: WILLIAM H. BEERS, JR.

HEAD OFFICE 112 & 114 Broadway, N.Y. General Agent for the Dominion of Canada: WALTER BURKE, Esq., Herald Buildings, Montreal.

The New York Life Insurance Company

IS ONE OF THE OLDEST INSTITUTIONS

Of the kind in America, having been chartered in the year 1841, and commenced business in May 1845. During the twenty-three years of its existence, it has issued policies upon the lives of more than

Fifty Thousand Persons.

and has paid in losses \$5,000,000 to the families and representatives of those who have deceased while members of the Company.

Annual Income EXCEEDS Four Million Dollars.

A SAFE INVESTMENT.

The instances are many within the experience of every Life Insurance Company, in which the proceeds of a Policy has saved from poverty the survivors of those who have thus made provision for their wants in times of prosperity and health. A wife may insure the life of her husband for her own benefit, and should she survive him, the amount of the insurance will be payable to her free from any claims against his estate; and in case of the death of the wife before that of the husband, the amount of the insurance may be made payable to her children.

THE COMPANY DECLARES ANNUAL CASH DIVIDENDS,

which are available in payment of each Annual Premium. All the insured in this Company receive dividends which can be used in part of the second and each subsequent Annual Premium thereafter; or the dividend may be allowed to accumulate, and subsequently used in whole or in part in the payment of Premiums. The business of the Company being PURELY MUTUAL, each member pays only the average cost of insurance, all surplus being annually returned to the Policy holders. (Companies having a Stock Capital usually retain a large portion for the Stockholders.) The Dividends paid to Policy holders exceed

\$3,000,000.
