

**DIFFENBAKER CHATS WITH REPORTERS**

Prime Minister Diefenbaker releases an arm of seat as he chats informally with reporters aboard the RCAF Yukon aircraft before landing at Nassau, The Bahamas, where he met with U.S. President Kennedy and British Prime Minister Macmillan. Also aboard plane was Lord Amory, British high commissioner to Canada.

**Artificial Kidney Keeps Teen-Ager And Man Alive**

EDMONTON (CP)—A teen-aged Calgary girl and a young Edmonton father cling to life today thanks to a special artificial kidney apparatus and a specially-trained medical team assembled by the team for use in treating Dianne Sutton, 17, eldest of seven children of Mr. and Mrs. Robert Sutton. Dr. Lionel McLeod of the University Hospital staff and head of the team said Saturday the treatment functioned reasonably well. Dianne was "still a very sick girl," but it was a question of time before it could be determined how much she benefited from the treatment. She was the first person in Canada suffering from Bright's disease, a malfunction of the kidneys which causes wastes to accumulate in the blood stream to be treated with the apparatus. After 12 hours the kidney was disconnected. It was sterilized and preparations were started for treatment of Keith Taylor, 35-year-old Edmonton engineer. This was to begin Sunday night. **TREATED WEEKLY** Earlier this year, Mr. Taylor was flown to Seattle for treatment. He now requires such medical help once a week. After he is treated the apparatus again will be sterilized and provide assistance for Dianne, a high school student. The kidney unit is the first of two sets to be shipped here from Seattle. The second is scheduled to arrive later this week. One of the problems facing the hospital is staff fatigue. Dr. McLeod, his assistant Dr. Ray Unal, technician Eunice Chesney and nurse June Hamblly are the only staff members

trained in operating the artificial kidney equipment. "With Mr. Taylor and Dianne needing treatment again so soon we will be hard pressed to work out a schedule for the long staff," said Dr. McLeod. "One body complains about the tiny tubes, but with only four people to operate and maintain the kidney I wonder how long some of us can stay awake."

**FEARED FOR LIFE** Dianne was brought here from Calgary this week after her condition worsened while undergoing treatment at Calgary. Only hours before the treatment began doctors feared for her life. Dr. McLeod said her condition was such that he doubted she would have lived through Friday night without the special kidney. The kidney, comprised of three layers of resin board separated by sheets of cellophane, is connected by a tube to an artery in a patient's arm. The blood passes through the tube and into the machine which extracts enough body poisons to maintain life. Mr. Sutton, a construction worker, and his wife, sat for several hours in the hospital awaiting word of their daughter's condition. Three hours after the kidney was placed in operation, doctors told the parents their daughter appeared to be making good progress. **TWO OTHERS DEAD** The family had moved here from Calgary last week so they could be close to two other children attending the deaf school. Dianne was left in the Calgary hospital, but was transferred here two days later, while waiting for news of her daughter's treatment. "We just came here so we could be near 11-year-old Debbie and six-year-old Dean who

**Census Of Birds Slated To Start**

NEW YORK (AP)—An army of 10,000 watchers began its annual census of the bird population in the United States and Canada on the week-end. It will be completed by Jan. 1.

**MIGRAINE RELIEF**

LONDON (CP) — The first annual report of the International Migraine Foundation says 90 per cent of the world's migraine sufferers now can be cured. This was made possible by the discovery of drugs by a voluntary research team.

**FORMER PRESIDENT DIES**

MEXICO CITY (Reuters)—Jose Giral Pereira, 82, ex-president of the Spanish Republic government in exile, died here Sunday. After a term as foreign secretary in the Republican government, he became president of the exiled Spanish government in Paris at the time of its recognition by Mexico.

**Mistrial Declared For Hoffa**

By GAVIN SCOTT  
NASHVILLE, Tenn. (AP)—A mistrial was declared in the James Hoffa conspiracy trial and the judge has ordered an investigation of what he termed attempts by the teamster president's close associates to influence the jury. The dramatic end of the nine-week trial came shortly after noon when the federal court jury reported—for the fourth time—it was hopelessly deadlocked. The jury deliberated 17 hours. After the trial E. P. Horn of Nashville, one of the jurors, said the deadlock was 7-5. He declined to say whether the balance was for acquittal or conviction. Hoffa, 49, had been charged with conspiring to take bribes from a Michigan transport firm in return for labor peace. "My feeling is one of gratitude," said Hoffa solemnly in a courtroom press conference.

**Arrest Reported Of Most Wanted**

WASHINGTON (AP) — The FBI said it arrested John Lee Taylor, one of its "10 most wanted fugitives," in Chicago He had been put on the list only six days ago. The FBI said Taylor is charged with the robbery and rape of a middle-aged Champaign, Ill. schoolteacher on July 8, 1961.

**CMHC Expands Loan Provisions**

OTTAWA (CP)—Works Minister Fulton announced here that Central Mortgage and Housing Corporation has been authorized to make direct loans for privately-sponsored rental housing projects. The move is aimed at providing builders in smaller centers where guarantees have been unable to obtain funds for government guaranteed loans from approved lending institutions.

**Leadership A TCA tradition... and a promise for the future.**

In recent years, your airline's annual rate of growth has far exceeded that of Canada's population. TCA's expansion reflects leadership and sound planning. As Canadians have come to rely more and more on air transportation, TCA has been ready to fulfill their needs. Some achievements and innovations. TCA's responsibility, of course, has been linking a huge, thinly-populated country tightly together—and, at the same time, building an asset worth \$316 million. But many smaller achievements have been part of this big one. Excellence in engineering and aircraft maintenance have made TCA one of the world's most dependable airlines. Your time has honored many advances in air-line operations to improve reliability, including: X-ray examination of aircraft structures and engine components. Development of operations research techniques in aircraft maintenance. Application of the latest quality-control methods. Development of the "fail safe" concept in the basic design of aircraft and aircraft systems. In 1955, TCA introduced turbine-powered flight to North America with the famous Vickers Viscount. Within a few years, it was operating a fleet of all-turbine aircraft (Viscounts, Vanguards and DC-8's... soon to be joined by DC-8's), which will be used partly to provide the world's first jet freight service, on TCA's Trans-Atlantic routes.

Practically every Canadian citizen, young and old, benefits from another important innovation by TCA and the Canadian Post Office. This is first-class mail carried between principal cities exclusively by air. World-wide prestige. Time and again, TCA and its people have won international recognition for corporate and individual achievement. For example, J. T. Dymott, Chief Engineer for TCA, has brought honour to Canada—and your airline's role in world aviation. He has served as Chairman of the first international conference on Superionic Air Transportation—attended by 400 experts from 25 countries—and more recently was appointed Chairman of IATA's Superionic Advisory Committee. Always alert to new concepts, TCA is applying miracle of electronic science to improve passenger service, management and control functions. Accounting computers are used in inventory control, advanced engineering and other areas of operation. The second quarter-century. These, along with many other achievements, add up to a promise for the future that TCA's owners—the people of Canada—can rely on. Superionic commercial flight and air travel developments that were science fiction when TCA first spread its wings are now just over the horizon. Because it is in the hands of competent and dedicated people the tradition of leadership established in its first quarter-century will be maintained for Canadians by TCA in the challenging years ahead.

**TRANS-CANADA AIR LINES AIR CANADA**

**RCN SHIP HAD ACTIVE YEAR**

In 1962, ships of the Royal Canadian Navy spent more than 7,000 days at sea and steamed more than 1,200,000 miles on exercises and training cruises in weather ranging from tropical calm to North Atlantic gale. Here, Resolute-class destroyer escorts of the Fifth Canadian Escort Squadron beat their way through the Bay of Biscay during a European cruise which saw them take part in a NATO exercise off Gibraltar.
