

Subtle perfection is always hard, if not difficult to detect. Far be it from me a simple cuddly type floor mop, free from mankind's agrandizements, be the one to bring this point to your attention. If I had not seen it with my own woggle-goggle eyes, and too, because of the sheer modesty of the Engineers, the University Community would be totally unaware of some of these magnificent feats of Engineering being accomplished almost weekly, many times to the wee hours of the new day. The incredible observance this week was that of, by a smuck of

genius, we'll just call him "Rouge",—took a discarded flash cube, and by certain manipulations, was able to make (the used flash cube), flash at least seventy times, before the plastic completely melted, all that remained was bits of glass, and wire, then "Rouge", took the glass and wire, put them in an acid bath until they fused into a collective mass, which he manipulated with special anti-acid tongs and forceps. While under the acid solution, areful not to let any oxygen touch the mass, then with, an anti-acid resistor, inserted diagonally, between the wire-glass mesh, then vacume-pumped the acid from the spherical conglomeration by means of a pin valve, seeded into its side, quickly tonging it from the bath, into a liquid plastic bath. then onto a teflon covered receptacle, which slaked in about ten to twelve minutes. Then he inserted slightly elongated cromel wires, (the typr of wire they use in making hot plates) into the camera which also was attached to the newly formed bulb,

and to the amazement of all the Klositeers, "Rouge" accomplished the unthinkable, all the Engineers gathered around, and it sounded like Sesame Street time, and they had "The Count", as a guest, they started to count one, as "Rouge", discharged the lamp, two...three...four, all the way to one hundred, and then to two hundred, and then to three, four, five, six, and at seven hundred discharges with his forefinger, it started to get quite sore, well, a small blister had even formed on the end, no-one could believe what they were seeing, and all talked amongst themselves, so don't think anything about it either, for its and every week occurance here in Engineering-1st floor of the "Duffy Science Building."
