ated solely by these considerations. Education in the arts and social disciplines must be advanced as well, so that we shall be assured of a people with the balance, the understanding, the creative spark, the real riches of the soul and mind which only the broader vista of the humanities can bring.

Of primary importance is the role of the individual in national progress. Do we put security ahead of adventure when it is only adventure that, in the end, can produce security? Perhaps we might do well, as individuals and together, to think a little more about how, as a nation, we could promote growth over a long period of years rather than put first emphasis on easing the recurring twinges of national growing pains.

Canada is not off-stride; we are adjusting our gait for a necessary interval, while we gather new force for the surge ahead. And that conviction, I am sure, is shared by every Canadian who pauses, even briefly, to think back along our path.

Gifted Students

Dr. R. W. Burnett, Professor of Science Education at the University of Illinois, has come forward with a suggestion which, if adopted generally, might help to solve at least one problem in education. His suggestion is that special classes for exceptionally gifted and interested students be set up in schools on all levels.

Generally, our system of education seems to be based on the assumption that students have equal capabilities for learning or that, in any case, the "average" pupil should be permitted to set the pace. In recent years in some schools consideration have been given pupils who for one reason or another are unable to keep up with their fellows.

But, surely, the brilliant student ought to have facilities to encourage his moving ahead at a more rapid pace than those in the average class, which no doubt include the majority of pupils.

EDITORIAL NOTES
There were no acclamations on Nomination Day. That's all to the good. There always seems to be something lacking in political interest when a contest goes by default.

American naval officers won't say whether the "thing" their ships were tracking in the Atlantic was a Russian submarine, a big fish, or a whale. They admit, however, that it had a "steel hide". That's a pretty good clue. We have never heard of a fish or a whale with a steel hide.

Public opinion surveys predict the re-election of the Conservative Government with a good majority. That, of course, is welcome news to Conservative candidates. It must be remembered, however, that the results of these surveys are by no means infallible prophecies.

The importance of discovering how to obtain power efficiently from the atom is obvious in the rate of increase in the world's consumption of energy. The measurement of power employed by scientists is a standard which they call the Energy Unit. From the year of the birth of Christ to 1860 the world used six and a half Energy Units. Consumption from 1860 to 1957 was five Energy Units, and now the world is using two-tenths of an EU annually.

OTTAWA REPORT

Getting Out The Vote

By Patrick Nicholson
Special Correspondent for The Guardian

Ottawa: Vote how you like — but go out and vote.

On Monday, March 31st, adult Canadians in every community will be entitled to the democratic privilege of choosing one of our fellow-citizens, perhaps one of our neighbors, to represent us in our federal Parliament at Ottawa.

The 265 men and women chosen by our votes that day will govern or daily lives for the next five years. They will decide how much we must pay in taxes each year. They will set the policies which will influence our standard of living and our jobs, and direct the course of our country.

How much will you pay, over the next five years, to the federal Government in direct and indirect taxes? If you are an average family, you will pay in total enough to buy two new low-priced cars. Three-quarters of your tax payments will be in "hidden" taxes, which you don't know you are paying.

How much thought and time would you devote to choosing between buying a Chevrolet or a Ford? You should not spend less thought and time in choosing between voting Conservative or Liberal.

BUT VOTE
In our last election, only 75 per cent of our voters took the trouble to exercise their privilege. But in Russia's last election, 99.6 per cent went to vote their choice "Yes." Couldn't 99.6 per cent of us free Canadians take sufficient interest in our country and our children's country to go to express our own choice as to who should govern us?

Our forefathers fought and suffered in civil war and in revolution to obtain their right and our right to self-government and democratic elections. They considered that the right to vote was worth risking death for. Who are we now to throw away that blood-

Oil Wells In Galilee

National Geographic Society

Discovery of a deep oil deposit in Israel's northern province of Galilee may create a new economic frontier in that ancient Biblical region.

Oil already is gushing from southern wells opened in 1955 in the Negev Desert. Each new find brightens Israel's prospects for eventual independence from expensive fuel imports.

The oil deposit reported near Mount Tabor in Galilee lies about 25 miles from the huge refineries of Israel's Mediterranean coast, Haifa. The refineries are operating now at roughly a third of capacity as a result of long interruption to the pipeline flow from Iraq.

Galilee, where Jesus spent his boyhood and carried on much of his ministry, is a land of striking physical features. Generally hilly, it is divided into upper and lower districts that hold various geological formations suggesting possible oil traps. In northern or upper Galilee, the nation's tallest peak is 3,963-foot Mount Jarmaq. Mount Tabor, in Lower Galilee, looks down from a height of 1,929 feet on the lushly productive Esdraelon plain and valley.

The headwaters of the remarkable Jordan River flow through the northeastern panhandle section of the province, lying between Lebanon and Syria. Plunging ever lower, the streams meet in Israel's Lake Hula at 260 feet above sea level, then rush downward into Lake Tiberias (the Sea of Galilee) at nearly 700 feet sea level.

Plentiful rainfall and fertile volcanic soil make Galilee one of the country's most fruitful areas. New Israeli settlements along wooded hillsides and flower-filled valleys recall the prosperous and populous communities that flourished there 2,000 years ago.

From today's farms and orchards come grains, vegetables, tobacco, oranges, almonds, grapes, olives and figs. The old papyrus swamps around Lake Hula have been drained, releasing more land for cultivation. Fishing fleets take a rich harvest from the Sea of Galilee — a reminder that Jesus chose His first disciples from among lake fishermen.

TOURIST TRADE BOOMS
A lively tourist trade, based on hot springs and history, has developed at the resort city of Tiberias. Named for the Roman Emperor Tiberius, the city was founded by Herod Antipas A.D. 19. It became a center of Hebrew learning after Jerusalem's destruction in the 2nd century.

Early Signs Worth Noting

By Herman N. Bundesen, M.D.
During my years as a medical columnist, I have written countless articles about children's diseases, describing their symptoms and treatment.

But I continually receive requests from mothers asking about symptoms of illnesses such as measles, chickenpox, whooping cough and others. So I'd like to list again some of these contagious diseases and their early signs and symptoms.

RASH AND FEVER
Chickenpox — There is a skin eruption associated with fever. The rash occurs early and consists of successive crops of red, raised dots which turn into fluid-filled blisters and then dry up to form scabs. The rash is thickest on the trunk of the body.

Measles — This disease starts like a cold with fever, watery eyes and nose and sometimes sneezing and a slight cough. The rash, which occurs on the third to fifth day after the fever begins, is composed of groups of dull red blotches which begin on the face and spread downward over the body.

SLIGHT SWELLING
German Measles — First indication probably will be a rash and a slight swelling of the glands on back of the neck. The rash of small, pinkish-red blotches begins behind the ears and on the face.

Mumps — There is no rash with mumps. Symptoms consist of fever, nausea, pain and the familiar swelling about the jaws. Whooping Cough — This starts with symptoms similar to those of a cold. You might be deceived until the characteristic "whoop" develops in the cough.

Coughing frequently occurs in spasms and is accompanied by vomiting. NOT MANY CASES
We don't have too many cases of the following in America any more, thanks to our vaccination programs, but perhaps I had better list the symptoms anyway:

Smallpox — There is a sudden onset of high fever, headache and backache. On the third or fourth day this is followed by an eruption of red spots which become elevated and turn into watery and then pus-filled blisters. Generally, all the lesions are in the same stage. They first appear on the face and forearms.

PATCHES ON THROAT
Diphtheria — A sore throat with gray-white patches is the first sign. There also will be moderate fever and a croupy cough. There is no rash.

Scarlet Fever — This disease begins suddenly with fever, vomiting, sore throat and development of a rash and "strawberry tongue." Pin-point bright red dots usually appear first on the neck and upper chest, although in some cases they do not appear at all.

QUESTION AND ANSWER
L. T.: I have calluses on the soles of my feet. They have been removed several times but recur. Is there any way I can get rid of them permanently?
Answer: Calluses of this type can be removed by the use of dry ice. The cure usually is permanent, once they have been removed.

Husbands! Wives! Get Pep-Vim; Feel Younger
Thousands of couples are weak, worn-out, exhausted just because they lack iron. For new younger feeling after 40, try Ostrex Tonic Tablets. Contain iron for pep, supplement doses vitamin B. "Get-acquainted" size costs little. Be wise, get pep quick, thrifty way. Try Ostrex today. At all drug stores.

earth-walled chariot park dated about 1700 B.C. Authorities say the "parking lot" may have been used by the Hyksos, whose horse-drawn chariots launched the world's first blitzkrieg into western Asia and Egypt.

MAXIMS
There is no such thing as a little country. The greatness of people is no more determined by their number than the greatness of a man is determined by his height.

NOTES BY THE WAY

The Eskimos suffer from poor eyesight. Reading in bed until half-past February does it. — Brandon Sun

Our TV private eye reports that there were 18 murders and one accidental death during six hours of television the other night. In addition, a couple of songs were subjected to slow and agonizing deaths, and several products were talked to death. — Port Arthur News-Chronicle

OUR YESTERDAYS (From The Guardian Files)
TWENTY-FIVE YEARS AGO (March 19, 1933)
The Provincial Government, considering the question of maintaining increased revenue from Insurance Companies operating in the Province. The opinion was expressed that there would be sufficient extra revenue to meet the cost of administering the new Act.

Mr. John F. Whear, rector, Post Office Inspector, was sole candidate to nominate yesterday in the civic by-election for Councillor for Ward Four. He was declared elected by the City Clerk, and will succeed Mr. W. P. Doull, who recently resigned from the Council to accept a position as City Electrical Inspector.

TEN YEARS AGO (March 19, 1945)
The executive of the P.E.I. Federation of Agriculture has gone on record as opposing the Provincial Government's passing of legislation forbidding local unions the right to affiliate with national or international organizations. Mr. R. A. Profitt, Freetown, P.E.I. President, said he disapproved of the Government's recent action in compelling local unions to remain independent.

A new two-room school with adjoining quarters for a resident instructor is being built this season for the Indian population of Lennox Island. It was stated that construction is already under way and that it is hoped to open the new school for the fall term. Cost of the new school is budgeted at \$30,000.
