CARKSON'S PERIL

By WALTER BIEFUC (Continued)

Presently Clarkson was aroused by a tap at the tent pole.

"May I come in?" asked a voice, and without waiting for a reply a tall man, carrying a sledge in one hand and a roll of newspapers in the other, entered.

"Not well?" he inquired, glancing at the bed.

"Yes, I'm well enough," Thomas answered wearily.

"Oh! Taking a holiday because it's Christmas eve, I suppose. I've knocked off work, too, till the day after tomorrow. I've come to ask you to come along with us tomorrow if you've nothing better to do."

"Where are you going?"

"My wife and I are going for a bit of a picnic, to give the youngsters a treat, you know, and we want you to come along. I cannot promise you anything very grand," he added, with a laugh "but it will be better than moping here alone all day. Will you come?"

"I don't think so. Thank you, Mr. Rock. I'm fond of moping, you know, and I should only spoil the children's pleasure if I took my gloomy face among them."

"That's all nonsense. The youngsters will be disappointed if you don't come. They think there is no one like you."

But Clarkson still persisted in his refusal.

"Well, if you won't, you won't, I suppose. I won't press you to come against your will," said Rock, and he left the tent looking rather vexed. He returned in a few minutes and threw a roll of newspapers on the bed.

"MAY I COME IN?" Rock said, "but perhaps you would like to look at Thomas thanked him. But when he was gone he threw himself down in the old attitude of silent despair.

Christmas day broke fair, bright, genial, lovely—the very ideal of South African weather. The sky was a stainless blue; the river glistened like burnished gold; the air was balmy and fragrant. Clarkson spent the morning wandering up and down the river bank. He gazed upon all the beauty of earth and sky calmly. It did not seem to be for him. A dark sea and a wild storm would have better suited his mood.

In the afternoon he returned to his tent, wishing that Christmas was over that he might get back to work. Labor was all that he cared for now, for physical weariness brought with it some measure of mental rest. Listlessly he picked up one of the newspapers Rock had left with him. What mattered it to him how the rest of humanity were moving, when men were buying and selling, who was growing rich and who had become poor? He was about to fling the paper down again when something caught his eye—something that instantly banished the weariness and indifference and brought the hot blood rushing to his cheek. It was a Johannesburg journal, and he read:

"Truth is, after all, stranger than fiction, and murder will out. The truth of these well known legends has just been proved in a remarkable manner. Few people will have forgotten the excitement into which Johannesburg was thrown about 18 months ago by the murder of Mr. Diblin, a wealthy and much respected merchant of this town. A young man named Clarkson was accused of the crime, and he was sentenced to death. The sentence was afterward commuted to penal servitude for life. It will be remembered that Clarkson escaped from prison and that all efforts to trace him were unavailing. It seems, however, that the young fellow was innocent of the crime for which he nearly paid the awful penalty.

A man named Dick Carter, who was injured in the dynamite explosion at the Gladstone mine yesterday and who is now dead, confessed to the murder. It appears that for some time there had been a rivalry between Mr. Diblin and Carter, and on the day of the murder it terminated in a bitter and terrible quarrel. Later in the evening as Carter was returning home he met Mr. Diblin, who was very angry that, as he thought, Carter should be dogging him. Carter was insolent, and Mr. Diblin threatened to give him in charge, whereupon Carter, who was not sober, pulled out his revolver, which he had bought from a native a few weeks before, and shot Mr. Diblin. Carter did not at first think that Mr. Diblin was dead, but imagined that he had merely fainted.

"Being hard-up, he took from the pockets of the prostrate man all the money he carried—a large sum—amounting in notes and gold to several thousand pounds. He also took a watch and chain. Carter had scarcely accomplished this when a man turned the corner of the street and came toward him. Carter sprang back in the shadow of a building and waited for the man to pass. Instead of this, however, the man lay down on a stoop a few yards away. Carter waited some time, but as the man did not move he came to the conclusion that he must be asleep. Then Carter slipped out of the shadow, and going up to Mr. Diblin, he discovered that he was dead. Sobbered by the horrible discovery and fear of the consequences, he threw the revolver from him. Then he took Mr. Diblin's watch and a few of the notes and placed them in the pockets of the sleeping man. It was a devilish act.

"Carter did not know till afterward that it was that he had so cruelly injured. He tried, he said, to make what reparation he could by helping Clarkson to escape from prison, providing him

A NATIONAL MINT

A British Columbia Paper Makes a Canadian Suggestion.

A proposition is being advanced in Eastern Canada that it is time we had a mint of our own. It is urged that apart from any question of national pride, much good would infallibly result from the world being made acquainted with the fact, in that most practical manner, the offer of local currency that Canada produces her own gold.

The very great interest which was excited in England when Australian sovereigns made their first appearance in London is cited in support of the contention. It certainly does seem somewhat peculiar that United States gold is recognized as legal tender by our Government when this country is now producing, or in any event will shortly produce, more than enough of the precious metal to supply all the wants of a colony.

It must not be thought that the advocates of a national mint wish to do away with the excellent system of paper money now in use in this country. By no means. But it is suggested that a certain amount of our own gold be coined more by way of advertisement, as it were, than for very general use in our own country. There is much to commend itself in this suggestion, and it is to be hoped that it will receive the earnest attention of the Government. What a splendid effect it would have, for example, if Mr. Laurier were to pay his way in England with Canadian gold. What inquiries would there not be made regarding the land which sends forth that golden specie!

It would indeed be a venture to predict that reyn would be found, and that speedily, for the list of Canadian gold companies in the London Stock Exchange is a long one. It is true that in the absence of any data showing the cost of the establishment and maintenance of a mint these remarks are of somewhat tentative value, but it is not to be thought that the gold which is selected for the establishment of such a significant institution than the coming year. It is to be hoped that the longest reign of a British monarch was honored Canada gave forth yet another evidence of her entry into the company of nations.—The Province British Columbia.

Nansen's Case for Divorce. "My dear, if you read the daily papers you will notice that Explorer Nansen divorced his wife before he set out on his expedition to the Pole, so that she might be married again without the formality of having to prove his death," says the Cleveland Plain Dealer.

"What did he settle on her?" "Nothing is said about settlements. He was going, you know, where the sun don't set."

"Nonsense," she may have been a fool. How did he know that he wouldn't find her married when he came back?"

"Well, as I never saw the lady I can't say. You can take chances like that with some women, you know."

"And besides, she must have been a terrible creature for asking the divorce. Going to the North Pole would never be accepted as sufficient cause in this state."

"One of the most curious of all the myriads of photography has just been brought to light at Portsmouth, Ohio, where a furniture store has been photographed through human beings in a manner which no one can explain. The facts concerning this strange event are related by W. B. G. Lee, in whose office it happened.

A travelling photographer entered and offered to take a flash-light picture. Mr. Glee sat in a chair with one leg crossed over the other. He held a checkbook on his knee. The photographer lit the flash-light and there was the record. Mr. Glee says there were two distinct faces attached to his leg, which the photographer explained by the fact that some powder had been spilled on the camera lens.

"The next day," says Mr. Glee, "the photographer sent me one of the pictures he had taken. What was my astonishment to see that the backs of the chairs in which I sat, the stumps and articles of furniture that were also attached back of us in the room showed distinctly the same faces as those which were on my back when I was sitting in the chair."

Their Peculiar Aversion. Most people have aversions of some kind or other, and some very strange ones. The sight of a set of false teeth make John L. Sullivan sick at the stomach. Napoleon did not like to see a white dog. Agassiz could not bear to touch polished steel. The sight of the rising moon, when it was full, always made Mme. De Staël ill. Bare footed children made Louis XIV. nervous.

The Marquis de Montebello, who had a habit of saying "adieu" to his horse, once broke up his eye on a poor harem. He said he saw an attack of vertigo when he saw anybody chewing gum. Dickens never liked a stiff shirt bosom, and Buffon would fly into a rage if anyone put an egg on the dining table at which he sat.

The Value of Diamonds. Diamonds averaging Per carat Three-quarters carat each, \$4 One carat each, \$10 One and one-quarter carat each, \$15 One and one-half carat each, \$20 One and three-quarters carat each, \$25 Two carats each, \$30

In other words, the value of the gem increases in the geometrical ratio of its weight. Four diamonds, weighing together four carats, are worth \$25; but one diamond weighing just as much is worth \$30. Stones weighing over two carats are about the same price per carat as those weighing less, but the demand for them is limited.

If the demand for diamonds was as imperative as the demand for beef or flour, the geometrical ratio would again come into play, and five-carat stones would be valued in the thousands.—New York Times.

Testing His Honor. Your druggist is honest if when you ask him for a bottle of Scott's Emulsion to give you just what you need, he tells you that it is the best form in which he can give you the medicine.

A Lumber Yard Without Lumber. It would be a strange sight. But we wouldn't mind the look of it if we sold every board, plank and stick in our forebay before the opening of navigation.

There's Money In Lumber. But it's hard to get money out of it unless you hustle for it. We will work hard for the next few months and will make it worth your while to buy your spring lumber now. Come and see how we do it. Telephone communication. JAMES BARRETT.

GENERAL AUCTION. Let all the town and all the country send in their surplus stock to General Auction and hand you the cash every day. Our sale will include all kinds of goods, dry goods, clothing, furniture, hardware, bronzes, extras, silverware, etc. This sale will continue nightly and every market day. We are now receiving goods and hope to be in our usual line of goods by Friday next.

E. H. NORTON, AUCTIONEER. Feb. 3 1897.

ORDER NOW. We are giving low prices on Job Printing. Now is the time to have your work done before the spring trade commences. Send in your order now, we will satisfy you in good work and low prices.

J. C. TAYLOR, Printer & Bookbinder, QUEEN STREET. Orders by mail promptly attended to.

AUCTION SALES. Lands and Tenements, Furniture, Surplus Goods of all kinds, Bankrupt Stock, etc., conducted for small fees, or on commission, as may be agreed upon. Special Information given to intending purchasers of City or Country Properties now in the market. Apply to A. McNEILL & CO., Auctioneers and Real Estate Agents, Office and Warehouses, Dundas Street, Queen St. Ch'wn, P.E.I. 32—d4w2.

Piles Cured by Dr. Chase. I. M. Iral, 186 Drolet Street, Montreal. 15 years suffered. Cured of Blind Itching Piles.

William Butler, Corsowan, Ont. Suffered from Piles for 20 years. Cured of Protruding Piles by one box.

Palano Bastard, Gower Point, Ont. Suffered for 30 years. Cured of Itching Piles by three boxes.

Nelson Simmons, Myersburg, Ont., cured of Itching Piles.

Dr. Chase's Ointment will positively cure all forms of Piles. Write any of the above if in doubt.

The Echo De Paris says that fighting has occurred on the frontier of Siam, between the French and Siamese.

The Life of Dr. Chase. As a compiler of Chase's Recipe Book his name is familiar in every household in the land, while as a physician his work is simple formulae for the relief of his name that will be handed down from generation to generation. His last great medicine, in the form of his Syrup of Lined and Turpentine, is having the large public patronage that its merit, Piles and Catarrh. Care are having.

Chase's Syrup of Lined and Turpentine is especially adapted for all Bronchial and Asthmatic troubles.

TIME MEASUREMENT.

WHY POPE GREGORY XIII. CORRECTED CAESAR'S SYSTEM.

An Interesting Account of How the Gregorian Calendar Came into Existence—Familiarly Appropriate Reading For This Time of the Year.

THE present time measurement that is now used by nearly all nations is the re-modelled system adopted by Julius Caesar in the year 46 B.C.

There were 366 and 365 days in the Greek year at different times. Under the name of the year 46 B.C. there were 366 and 365 days in the Greek year at different times.

man year had 355 days, and there was so much variance between the civil and the astronomical year that the autumn feasts were celebrated in winter, and the harvest in mid-winter. Every second year an extra month, called Mercedonius, was added.

This month had no certain length, but was arranged by the pontiffs, as they saw fit, which naturally gave rise to corruptions and fraud, interfering with the duration of office and the collection of debts.

In order to restore the seasons to the proper months it was necessary for Caesar to make the year in which he inaugurated the change contain 455 days. On the hypothesis that the astronomer Hipparchus consisted of 365 1/4 days, he had each fourth year contain 366 days and the others 365.

The extra day was added to the 24th of February, which was called the Kalends, being the sixth before the kalends, or 1st of March, celebrated in honor of the expulsion of the kings. The additional day was placed next to this feast and known as Bis-sextas-kalendas.

But this year of Caesar was too long by 11 minutes and 13.5 seconds, so that in about three days in 40 years, so that in A.D. 1582 the error amounted to ten days. To correct this miscalculation, Pope Gregory XIII. ordered that Oct. 5, 1582, should be known as Oct. 4, 1582, and to prevent a recurrence of the error it was arranged that the intercalary days should be omitted in four centuries—that is, one in each century except the fourth. Thus 1600 was a leap year, 1700 and 1800 were not. The passing year 1896 was a leap year, and under ordinary circumstances 1900 would be, but it will not be, in order to come under the rule of the Gregorian calendar. Therefore, the years which have 292 days are, first those that are exactly divisible by 4, and not by 100; second, those that are exactly divisible by 400 and not by 4000; and the year 2000 A.D. will be a leap year and the only one in the series of the four century years.

All the Catholic countries adopted the Gregorian calendar as soon as the papal bull was issued, but it was not introduced into England and her colonies till 1752, the error then being 11 days. The dates previous to this change are referred to as old style, and sometimes given both ways—as Washington's birthday, Feb. 11-22.—Chicago Tribune.

A Miracle of Photography. One of the most curious of all the myriads of photography has just been brought to light at Portsmouth, Ohio, where a furniture store has been photographed through human beings in a manner which no one can explain.

The facts concerning this strange event are related by W. B. G. Lee, in whose office it happened. A travelling photographer entered and offered to take a flash-light picture. Mr. Glee sat in a chair with one leg crossed over the other. He held a checkbook on his knee. The photographer lit the flash-light and there was the record.

Mr. Glee says there were two distinct faces attached to his leg, which the photographer explained by the fact that some powder had been spilled on the camera lens.

"The next day," says Mr. Glee, "the photographer sent me one of the pictures he had taken. What was my astonishment to see that the backs of the chairs in which I sat, the stumps and articles of furniture that were also attached back of us in the room showed distinctly the same faces as those which were on my back when I was sitting in the chair."

Their Peculiar Aversion. Most people have aversions of some kind or other, and some very strange ones. The sight of a set of false teeth make John L. Sullivan sick at the stomach. Napoleon did not like to see a white dog. Agassiz could not bear to touch polished steel. The sight of the rising moon, when it was full, always made Mme. De Staël ill. Bare footed children made Louis XIV. nervous.

The Marquis de Montebello, who had a habit of saying "adieu" to his horse, once broke up his eye on a poor harem. He said he saw an attack of vertigo when he saw anybody chewing gum. Dickens never liked a stiff shirt bosom, and Buffon would fly into a rage if anyone put an egg on the dining table at which he sat.

The Value of Diamonds. Diamonds averaging Per carat Three-quarters carat each, \$4 One carat each, \$10 One and one-quarter carat each, \$15 One and one-half carat each, \$20 One and three-quarters carat each, \$25 Two carats each, \$30

In other words, the value of the gem increases in the geometrical ratio of its weight. Four diamonds, weighing together four carats, are worth \$25; but one diamond weighing just as much is worth \$30. Stones weighing over two carats are about the same price per carat as those weighing less, but the demand for them is limited.

If the demand for diamonds was as imperative as the demand for beef or flour, the geometrical ratio would again come into play, and five-carat stones would be valued in the thousands.—New York Times.
