F. W. KINGSLEY & CO., Druggists,
242 4TH AVE., N. Y.

STEM WIND, VERSUS KEY WIND.

The Stem-Winding Watch is Decidedly the Best.

AS the cases need scarcely ever be opened, they are NOT LIABLE TO GET DUST IN, like the Key-Winder.

Another advantage, the watch can be WOUND AT ANY TIME the wearer happens to think of it—no key needs to be carried in the pocket to shovel dust into the watch every time it is used.

To meet the wants of those who object to Stem-Winders, our

Stem-Winding Rockford Watches

can also be WOUND WITH A KEY, should the stem-winding give out, which we have never known it to do when used right.

Key-Winding Watches at Reduced Rates.

Wednesday, Sept. 15th, at 12 o'clock
noon, on the premises.

THAT favorite and commodious Hotel, known as the REVERE HOUSE, conveniently situated at the head of Steam Navigation Co.'s Wharf, Great George Street, and near the Railway Station, Public Buildings and Market. It has a fine view of Hillsborough River and Harbor, having the benefit of refreshing breezes from the salt water.

The REVERE has always received large and constant patronage from leading tourists, commercial men and the general public.

—ALSO—
Those large and very valuable Building Lots, adjoining the Revere House, as described by plan on hand-bills.

Terms easy and made known at Sale.
A. McNELL,
Ch'town, Aug. 19, 86—law & wy Auctioneer.

Why Holsteins are Preferred as a Breed.

Holsteins combine more desirable qualities for the dairyman, general farmer and stock-raiser than any other breed. The first and most valuable qualification is the production of milk; for this purpose they have been bred, and acknowledged to excel all other breeds for centuries in their native land, Holland. Their range of milk averages from 10,000 to 18,000 pounds per year. They mature early, coming into milk when about two years old, hold out nearly the whole year, instead of going dry for six months as is the case with the ordinary cows. The milk is not only abundant in quantity but rich in quality. They are very hardy, not requiring rich food or extra care to obtain good results—hence are very desirable for the average farmer. They are large, hardy, and rapid growers, maturing early, fattening readily, and making an excellent quality of beef—hence are profitable for a cattle raiser, particularly as his heifers will be even more available than his steers. Our heifers at one year often weigh 800 pounds; at two years 1,200 pounds; and cows at maturity 1,400 to 1,700. Their milk records are the highest, ranging from 8,000 to 11,000 pounds per year by heifers with their first calf, and 12,000 to 18,000 by mature cows. During the milking season it is difficult to keep Holstein cattle in high flesh, but when dry they take on flesh rapidly—hence are the most desirable, as being large and valuable for beef when done milking. They have been thoroughly tested in different parts of the United States, from Maine to California, and as far south as Texas, and everywhere have proven successful. No other breed has ever made such rapid progress in the favor of the practical American farmer as the Holstein has done in the past fifteen years, and at the present rate of increase, in twenty-five years more they will outnumber any other improved breed in America. The quality of the Holstein beef is of the finest kind; the fat better distributed through the lean than most any breed, and the butcher, who was first opposed to the Holstein, will now give more for a Holstein than any other stock.—J. H. Stillwell.

The British Meat Supply.

At a recent London conference on home, foreign and colonial sources of meat supply a paper was read by Major Craigie. Major Craigie's estimate would give the home meat produce of 1885 as 1,361,000 tons. Adding the imported supplies, 129,000 tons from live animals and 335,000 tons of dead meat, he said this computation made the total consumption of the country 1,825,000 tons, or taking the population at 36,000,000, 1 cwt. annually for each inhabitant. These supplies he tabulated as follows:

	Tons.	Per cent. of whole.	Pounds per head
Home produce	1,361,000	74.6	82.9
Imported from Col.	67,000	3.7	4.1
Imported from U.S.	235,000	12.9	18.0
Imp'd from Europe	96,500	5.3	5.9
Imp'd from S. Am.	8,000	.4	.5
Total	1,825,000	100	112.1

He said that into the port of London alone there entered last year a frozen flock of sheep numbering 778,000 head, while all the foreign live sheep shown in the London markets in the same year were but little over 600,000. He argued, further, that the prospects of future colonial meat supply may be judged of best by analyzing the statistics of live stock of the countries whence they are at present chiefly drawn, and said that Australian sheep have increased 15 per cent. and New Zealand 20 per cent. in the past ten years. Canadian sheep had decreased 8 per cent. in that period, but Canadian cattle had increased from 2,687,000 to 3,515,000. It was asserted that in the United States cattle had increased from 28,000,000 to 45,500,000, or 63 per cent., in the past ten years, but it was pointed out that the proportionate growth of population to live stock is increasing in the United States.

A Highly Mysterious Case.

As "nothing succeeds like success," so, it would seem, nothing fails like failure. The chorus of disclaimers and protests against the kidnapping of Prince Alexander, now that the so-called provisional government which was based on that movement has gone to pieces, is exceedingly impressive. The Emperor William writes to the Czar, expressing his grief and amazement; Russia disavows all complicity in the affair; Austria does the same, and the King of Serbia is so indignant over the infamy that he declares he would sacrifice everything to help the Prince if he only knew his whereabouts. Circumstances have shown that the movement had no strength in Bulgaria; the regiment of soldiers which engaged in it has been disbanded and disciplined, and the statesmen who constituted themselves a provisional government are safely under lock and key. Clearly the "revolution" did not come from within, and the voluminous denials are evidence that it did not come from without. The logical conclusion, therefore, would be that it did not happen at all, but was all "a dream, a phantom, a show." Perhaps the Prince only went on a pleasure trip. But then, it is strange that his whereabouts are such a mystery and that the yacht which conveyed him away was clearly subject to Russian orders.

"HELLO!" we heard one man say to another the other day. "I didn't know you at first, why you look ten years younger than you did when I saw you last." "I feel ten years younger," was the reply. "You know I used to be under the weather all the time and gave up expecting to be any better. The doctor said I had consumption. I was terribly weak, had night sweats, cough, no appetite, and lost flesh. I saw Dr. Pierce's Golden Medical Discovery advertised, and thought it would do no harm if it would do no good. It has cured me. I am a new man because I am a well man."
—tr and v

New Fields for Electricity.

A novel and original application of electricity has, says the *Mechanical World*, been evolved by an inventor, who, we need not say, hails from the land of stars and stripes. He probably is the happy husband of a woman who loves her country and contributes to its greatness by frequent additions to the number of its future presidents, and has found them troublesome during the first stages of their progress toward this final goal of every properly constituted American. So he concerned the idea of making electricity, which already lights his house, calls his helps, turns the spit and brushes his boots, further serviceable in the nursery, and has invented an electric cradle, in which electricity plays a double part. Firstly, it rocks the cradle, instead of the husband having to perform this duty at night. The cradle is hung on two swivels as usual, and carries an iron armature which is alternately attracted by two electromagnets, with change of current at each contact. The practical value of the invention has been demonstrated by the fact that several babies enjoying the reputation of confirmed screamers have succumbed to the fascination of the electric cradle in a few minutes. No doubt the thought that so much ingenuity had been devoted to their comfort rendered them speechless or rather screenless. Secondly, two fine threads are arranged parallel to each other, and half an inch or so apart, in the material of the mattress across the cradle at the proper place, and communicate with the poles of the battery. In ordinary times no current passes, but when an event, the nature of which we need not more particularly specify, happens, the conductivity of the material separating the two wires becomes increased, the current starts and rings a bell to announce the heterogeneous current. The advantages of the new invention must be evident to every married man, and nobody therefore, needs to be surprised that a company with a capital of a million dollars, the Electric Cradles Company, has been formed immediately to work it. We venture to suggest that this is only half an invention, and wants to be completed by an electric automatic sponging, drying and linen changing apparatus, and that the nursery appliances require to be further augmented by a periodical feeding machine worked by electricity. Stomach pumps are at present chiefly used for emptying that food reservoir, but there is no reason why they should not be employed for filling it and future presidents be saved the waste of energy caused by having to suck the bottle. Until all this is done young husbands will not be able to enjoy their sleep uninterceptedly, and therefore we do not doubt that electricians will devote themselves seriously to the solution of the problems we have indicated.

A Permanent Exhibition.

Sir Charles Tupper is to consult with the Dominion Government with reference to the proposal to have a permanent Colonial Exhibition at London. The scheme is a large one, and has to be considered from many points of view. It would not do, of course, to place the exhibit now in London on show and to leave them there permanently, because as years progress our manufactures improve. The articles shown to-day will be but poor representatives of those produced a few years hence. Then the affair will involve expense. The counterbalancing advantage is in the widespread and continuous information such a show will give with regard to Canada and her capabilities. The astonishment our manufactures have awakened in England indicates that we have been but half appreciated in the past. Canada has across an interest in herself by the existing show and has gained some good customers. The point is to keep up that interest and to enlarge the trade. Can a permanent show do this, and will it pay?

The Different Treatments.

Some of the half-breeds who escaped from Canada after the rebellion endeavored to take up land in the American North-West; but were prevented by the Secretary of the Interior on the ground that they were Indians according to United States law, and were therefore debarred from participation in the rights of citizenship. Their only resource now is to return to Canada. Those who talk about Dominion ill-treatment of the half-breeds should contemplate the action of the American authorities. The half-breeds were as much the pioneers of the American North-West as of the Canadian North-West, yet in Canada they have land. Special grants have been made for agricultural and educational purposes, while in the United States they are regarded as outcasts.

Consumption Can be Cured.

Not by any secret remedy, but by proper healthful exercise, and the judicious use of Scott's Emulsion of Cod Liver Oil and Hypophosphites, containing the healing and strength-giving virtues of these two valuable specifics in their fullest form. Prescribed universally by physicians. Take no other.

MEMS are allowed to risk their lives at Niagara Falls, but animals cannot have that chance. Hearing that it was proposed to have the horse Blodin walk a tight rope over the falls, Mr. Henry Bergh has written to prevent the deed, and threatens prosecution if it is attempted.

ADVICE TO MOTHERS.—Mrs. Winslow's Soothing Syrup should always be used when children are cutting teeth. It relieves the little sufferer at once; it produces natural, quiet sleep by relieving the child from pain; and the little shrub awakes as "bright as a button." It is very pleasant to taste. It soothes the child, softens the gums, allays all pain, regulates the bowels, and is the best known remedy for diarrhoea, whether arising from teething or other cause. Twenty-five cents a bottle. Be sure and ask for Mrs. Winslow's Soothing Syrup, and take no other kind.
