FRONT MOUNTAIN Nut and Date Cake Special at Stewart Bakers Saturday. This cake is rich and spicy with ground dates and chopped nuts mixed in, and topped with a snowy fluffy white frosting.
ROAD REPORT — Motorists are advised to keep off all highways as driving is very dangerous. All roads are covered with ice and rain has made them very slippery and treacherous.

CONCLUDE GOSPEL MEETINGS — Mr. R. M. Cracken and Mr. A. Ramsay have concluded their first week of meetings in a special series being held in the Gospel Hall on Upper Prince St. Their messages have been in keeping with the need for the present time: "plain speaking" and a seeking to urge upon the people to face facts from the word of God; such as the undying nature of man's soul, that all have been born in sin, that there is a real Heaven and a real Hell; that personal faith in the Lord Jesus and His work on the Cross is the only way a sinner can be saved from Hell; and the crying need for old-time conversions which make a man or woman live for God, and thus convince the world of the reality in Christian living.

BREADALBANE FRIENDLY FRESIDE GROUP — The opening meeting of the Friendly Frieside Group was held on Wednesday evening, January 17 at 8 p.m. at the United Church, Mansel. The devotional period was conducted by Rev. Mr. MacPhail, who also presided over the business period. The following is the slate of officers for 1951: Honorary President, Rev. Mr. MacPhail; president, Mrs. James Snowie; vice-president, Mrs. M. J. MacLeod; secretary, Mrs. Eriand Cousins; treasurer, Wilbur Cousins. It was decided to use the Programme Annual for study and the following conveners were appointed: Convener of Fellowship, Mrs. Kenney; convener of missions, Mrs. Earl Todd; convener of citizenship, Mrs. Eriand Cousins; convener of culture and recreation, Wilbur Cousins. Membership fees were paid by those present. The meeting was brought to a close by the Mizpah Benediction. A dainty lunch was then served by several of the ladies present and a social hour was enjoyed by all.

IN MEMORIAM
In loving memory of Mr. and Mrs. Angus Campbell, who passed away March 28th, 1945 and February 4th, 1950.
Asleep in God's beautiful garden Sheltered from sorrow and pain Some day when life's journey is over We shall meet our dear ones again.
Ever Remembered by the Family.

Strange But True

Denmark has the most highly organized agriculture industry in the world. . . . About 10,000 farms in Canada have names. Farms that bear a name are usually progressive, and products bearing farm names are usually a source of pride to their owners. Our Department of Agriculture might look into this idea. . . . The old adage that, "man's work is from sun to sun, but woman's work is never done," is born out by a survey of 10,000 rural homes in 38 states showing that 87 per cent of the women on farms never have a vacation. . . . Believe it or not, but each day begins at East Cape, on the easternmost extremity of Siberia, before it begins at any other place. . . . Besides the sun, the earth receives a certain amount of heat from the stars and the moon—but the star Alpha Orionis sends us the most heat.

Do rainbows ever appear at night? Yes, these are called lunar rainbows, but are seldom seen, owing to the feeble light of the moon. . . . Besides turning its axis, the earth keeps rising in some places and falling in others. For instance, the Northern Coast of Norway rises 5 feet every 100 years, while sections of the New England Coast are sinking at the rate of one foot every century. . . . The reason more shooting stars fall to reach the earth is because they are worn out by friction and only dust falls on the earth. . . . Although the sun is approximately 3,000,000 miles closer to the earth on January 1 than on July, the Northern regions suffer from cold during the former month. . . . The twelve signs of the zodiac were used by Chaldean astronomers 4,000 years ago. Indeed, there is every reason to believe that zodiac signs were used 10,000 years ago. I refer you to the researches of Father Heras, Professor of Indian History and Archaeology at St. Francis Xavier's College.

One of the most unforgettable characters of history was Gaius Julius Caesar, better known as the Count of Cagliostro (1743-85), who was born at Palermo. This unique person was an apt scholar, an ardent knave, equally at home in a street brawl or a court intrigue. His knowledge of astrology, magic medicine, and many other subjects, was amazing to say the least. He was also a thief, a forger and a murderer. He let it be known that he had witnessed the death of Jesus seventeen centuries before, had been living on earth ever since, never changing his appearance; actually, he was then 35. Cagliostro's beautiful wife was as unscrupulous as himself, and by good teamwork, they were able to make a fortune from the sale of their so-called elixir of perpetual youth.

The pool in a poker game was first known as the kist, then the kit, and finally, kiddy. . . . The Coliseum at Rome was built in one year by 12,000 Jews and Christians conscripted for the giant task. But it took 70 years to build the Capitol in Washington, D. C. . . . The highest buildings in the City of London do not exceed 200 feet. But the Woolworth Building in America's largest city is 792 feet tall. However, the Eiffel Tower in Paris is 1,000 feet high, or 408 feet higher than New York's giant skyscraper. . . . New York's lemons are put in a Mason jar which is sealed, they will keep for months. . . . In a full sized window screen there is one mile of wire. . . . The 30 pieces of silver for which Judas betrayed Christ would be \$11.20 in Canadian currency. . . . Although a great inventor, Benjamin Franklin never asked for nor received a patent for his brain children. . . . According to the U. S. Census Bureau, Crane County, Texas, has a population of only 37, making it the smallest populated of any county in the United States. . . . It is a commonly held notion that few Jews become farmers. There are in the U. S. A. alone more than 70,000 Jews on farms. . . . South America has 40,000 Jewish farmers and there are quite a few in Palestine.

Flu Epidemic Hits N.S. Valley Towns
KENTVILLE, N.S., Feb. 2.—(CP)—An epidemic of influenza and common colds has drastically cut school attendance in Annapolis Valley towns, Wallace L. Barteaux, Kentville school supervisor, said last night.
Some 300 students out of a total of 900 were confined to their homes here. At Midleton, 345 out of 480 were ill yesterday. Similar situations existed in other centres.
Dr. Shirley Bishop, Kentville medical officer, said the sickness—mostly common colds and some flu—has reached the epidemic stage and advised as many as possible to stay in their homes.
At Halifax, Dr. Allan R. Morton, city health officer, said absenteeism because of colds is great-

Thanks
I wish to thank the Doctors, Nurses and Staff of the Prince County Hospital, especially Dr. Simpson for their kindness to me while a patient. Also to all friends who sent treats, cards and visited me.
Howard Callbeck, Tryon.

Thanks
I wish to thank the Box holders on my route who so kindly remembered me with their gifts and money at Christmas.
Frank Crabbe, Milton.

Thoughts For Our Time

By His Eminence Cardinal McGuigan (Copyright)
Recent discussion of education is largely confined to the details of one or other of the reports of the Hope Commission. It might be well at this moment to recall some of the aims of education, and particularly at the university level.
The fundamental purpose of a higher education is the cultivation of the mind, as Cardinal Newman once said. It strives to equip a young man or woman not only with knowledge but with strong powers of judgment and moral virtue. The human intellect is a dynamic force. Particularly in the young it is keen, flexible and strong.
Those who know the young very well are aware of the quickness and delicacy of their repartee, of the shrewdness of many of their sudden judgments. Too often their intellectual power exhausts itself in flippancy and irrelevancy, but it is power all the same. Higher learning's first task is to provide such an intellect with a knowledge universal enough to match its power. It does this by focussing it upon both the natural and supernatural ends of man.

Of equal importance with the cultivation of the mind as an objective of education is the task of introducing the keener student into traditional wisdom, into the theology, philosophy, science, mathematics, history and literature of many centuries. At one time this was done by way of the Classics because the study of Latin and Greek served to develop a sensibility to life, art and human values. Unfortunately this approach is becoming less and less frequent. Those who take education seriously regret this modern tendency, and particularly do they regret the decline of the study of Latin. Attempts to contact traditional wisdom by other approaches have not thus far been successful.
The Church has always been an important factor in intellectual progress. She has consistently sponsored and promoted the cause of liberal learning. But she is not its only defender. The celebrated Dr. Meiklejohn in his work on "The Experimental College" writes as follows: "Our first aim is not to get liberal thinking done excellently, but to get it done at all. In a word we must recognize that the drift of American life is against those forms of liberal thinking which seem most essential to its welfare."

The Church has no wish to take sides in the war-between-opposing schools of educators. She would be more than satisfied to find general recognition by all of them of the true hierarchy of the sciences, with theology in her proper place, guiding the others from above, making them subservient the true end of man—the divine destiny of union with God.
In addition to the above reasons for seeking higher education, there is a third and all-important one—the attaining of intellectual maturity. When boys and girls finish high school they begin in one way or another to experience the practical problems of life. They begin to give very serious thought to their calling in life. They are ready to dip into the kind of learning that is both based on experience and itself contributes to experience.
Some subjects can be learned with very little experience of life, mathematics for example, or science, language and geography. Others, notably philosophy, ethics, politics and literature, in its truest sense, demand very real experience of life because they deal not only with truth but with human nature itself. These provide training in sensibility. By their nature they bring a person into contact with the best of human achievement and impart a sense of values hostile to narrowness, bigotry, provincialism and distortion of every kind. Without some contact with them there is no higher education.
Such education cannot be satisfactorily nor fully accomplished in the secondary schools. The very young are incapable of receiving it. It demands experience and, perhaps, is most successful when the person concerned has been out of school for some time.
If our civilization is to be a high one, if it is to be better tomorrow than it is today, the minds of more and more of our leading citizens must achieve the kind of maturity that comes from blending of human wisdom and practical experience of life.
Let me conclude these remarks on education by urging the young to love learning, to pursue it diligently while at school and as long as they live. Let me remind them of the value of a deep rational life, of the life of the mind wisely directed towards the basic purposes of life. Let them not occupy themselves with the mere acquiring of facts. Those who limit learning to the gathering of facts only too often neglect the most important of all facts, the existence of God.
Let them, rather, bring vitality to factual knowledge, exercise their discriminating powers of reason upon it for their own greater satisfaction and for the happiness of society.

Stress Canada's Role In Keeping Peace

OTTAWA, Feb. 2.—(CP)—The importance of Canada's role in keeping the peace was emphasized in the Senate yesterday by the mover and seconder of the address in reply to the Speech from the Throne.
Senator J. Wesley Stambaugh (L-Alberta), the mover, and Senator J. M. Desjardins (L-Quebec), seconder, both said Canadian resources could play a big part in combating aggression.
"Let me conclude these remarks on education by urging the young to love learning, to pursue it diligently while at school and as long as they live. Let me remind them of the value of a deep rational life, of the life of the mind wisely directed towards the basic purposes of life. Let them not occupy themselves with the mere acquiring of facts. Those who limit learning to the gathering of facts only too often neglect the most important of all facts, the existence of God.
Let them, rather, bring vitality to factual knowledge, exercise their discriminating powers of reason upon it for their own greater satisfaction and for the happiness of society."
