

There are three conditions:  
When the blood is poor;  
When more flesh is needed;  
When there is weakness  
of the throat or lungs.

There is one cure: that is  
Scott's Emulsion.

It contains the best cod-liver oil emulsified, or digested, and combined with the hypophosphites and glycerine. It promises more prompt relief and more lasting benefit in these cases than can be obtained from the use of any other remedy.

See and get it, all druggists.

**Cheap and Good Feeding.**

The output of creamery butter will be considerably lower in the Northwest this year than it was last year. There are several reasons for this. In the first place there was a good wheat crop last year and wheat bringing a good price during the latter part of the season encouraged farmers to pay more attention to this crop. Second, there was a greater demand for steers at better prices, so the calves were fed more generously of whole milk, and many farmers even let the calves run with the cows. While we have no desire to discourage steer raising yet we see no good reason for giving them whole milk, since just as good steers can be raised on skim-milk, and under good management we could have just as many and as good steers without losing so much butter fat. We doubt if there is enough increase in the number and quality of the steers to make good what we have lost in decrease in creamery butter.

In certain localities pastures were very short during July and August, causing abnormal shrinkage in the milk flow, and flies for some unknown cause were so exceedingly numerous that cows seemed to spend a good share of the time fighting them. Rains during the last part of August were quite general throughout the Northwest which will improve pastures, and we look for an increase in milk during the month of September. And if cows are well fed during the fall and early winter we may in a measure make up our losses. At the state farm some forty dairy calves will be dropped during the fall and winter, and by generous feeding we expect to maintain a good flow of milk during the winter. It is our purpose to raise every calf and have them in good growing condition all winter on skim-milk and clover hay. The last of August we put ten acres of fodder corn into a silo; in round numbers there are 130 tons of cut fodder in the silo. During the winter we shall feed fifteen acres field cured fodder corn for roughage and bran and oil meal for grain. This supplies the cows with the nutrients for milk making at the least cost. The fodder corn will last until the first of April. We will then feed silage until the cows go to pasture, and during July and August we expect to feed full rations on silage. If there is any ensilage left in silo at the end of August it will be left in the silo and the new crop on top of it. This seems to us the simplest, cheapest and best way to provide feed for our dairy cows.—Farm, Stock and Home.

**Feeding the Colt.**

The future usefulness of the colt depends upon nothing so much as the feed during the first year of its life. To be useful in any way a horse must have good bones, and above all, good joints. Bones are built, like the rest of the body, from the feed consumed by the young animal, and if the food does not contain the elements essential to the growth of bone it is evident that there will be a weakness in this part of the organism. The milk from the dam contains a large proportion of the most necessary mineral substances, such as lime, but the colt seems to require much more in a short time, and may be seen trying to supplement this limited supply by taking occasional mouthfuls of soil. Probably the materials at the farmer's disposal contain more bone-forming material than bran and oats, and the colt should have plenty

of these and good clover hay from the start. It is quite safe, as a rule, to give as much as two quarts of these concentrates mixed per diem as soon as the colt can be taught to eat them, and this may be gradually increased. The colt's temperament and character should be closely studied, however, and the ration gauged accordingly. These concentrates and clover hay, being rich in protein or flesh-forming material, induce rapid development of muscle, sinew and tendon, as well as bone, and such are the great desiderata in colts. Feed liberally of the right kind of feed and nature will do the rest so far as bodily development is concerned.

In certain European countries, especially in Holland, oleomargarine is made in very large quantities. The largest factories in the world are located in Rotterdam. In these factories the use of pure cultures has for some time been adopted with almost absolute uniformity. The shrewd business men who manage these factories have thoroughly learned that if they wish to obtain in their products a flavor imitating that of butter they are obliged to use bacteria to give them this flavor. They therefore make artificial pure cultures and inoculate them into large quantities of pasteurized milk in essentially the same way that the butter-maker inoculates them in his cream. They allow the milk to stand in a warm place for a length of time, which will produce the proper amount of souring, and then this ripened milk is mixed with the fats and the mixed oils made into margarine products. The result is that a flavor of butter which is, of course, derived from bacteriological products of the souring milk is imparted to the margarine. All of the better grades of artificial butter are made in this way. The margarine factories use various kinds of pure cultures and experiment upon them with a good deal more care and know much more about their use than do the butter-makers.

**Nerves...**

**Wasted and Shattered by Worry or Overwork are Revitalized by**  
**Dr. A. W. Chase's Nerve Food**

"Nerves"—what a world of meaning this word has to scores of thousands of women who, through the strains of social life and the worry of home cares, are fast approaching the grave.

Nervous headaches, dyspepsia, irritability by day, restlessness and sleeplessness by night. Pains and aches in the body, derangements of the organs peculiarly feminine, loss of energy and ambition, despondency and despair.

These are some of the symptoms known to the woman of exhausted nerves. These are symptoms which entirely disappear when Dr. A. W. Chase's Nerve Food is used.

By creating new, rich blood and nerve tissue this great food cure of Dr. A. W. Chase restores and revitalizes the wasted nerve cells, puts new vigor and vitality into the system and frees woman of many ills which are due to exhausted nerves.

Dr. A. W. Chase's Nerve Food cures by the building-up process, which makes the body round and plump, and restores the glow of health to the pale, sallow cheek.

**Important Auction Sale**

I am instructed to sell by Public Auction, at the Court House, in Charlottetown, on Wednesday, December 20th, 1899, at 12 o'clock, noon, that large four story brick building on Grafton Street, now occupied by F. Perkins & Co., as a dry goods store.

This building was erected in 1896, and is one of the largest and most attractive store buildings in the city; it is centrally located, being immediately opposite the Post Office; and on the street which most persons from the northern and eastern sections of the country now use when driving into market, and which those from the southern districts will use, after the bridge over the Hillsborough River is built.

This is one of the rare chances to secure property in the very centre of the business part of the city.

Terms: Ten per cent at sale; balance on delivery of deed within ten days.

**R. BEARISTO,**  
Auctioneer.

Ch. Town, Nov. 28, 1899—
