

**Dr. Gould's Great Work.**  
 Though the determination of the places of the fixed stars in the northern hemisphere has engaged the attention of many observatories during the whole of this century and our knowledge of the places of the northern stars would therefore presumably be nearly perfect, it is a fact that Dr. Gould's work upon the southern skies practically equalized our knowledge of the two celestial hemispheres, says Professor T. J. J. See in The Atlantic. Such an achievement is a veritable monument to the American nation and has added new luster to the American name. Had the American people never contributed anything beyond the labors of Gould to the world's knowledge of astronomy this magnificent contribution alone would entitle the nation to an honorable place in the eyes of posterity.  
 And yet how little is the work of Gould known to even the best circle of American readers! So great was his devotion to the cause of pure science and so oblivious was he of contemporary fame that none but professional men of science are able to appreciate his incomparable services to the sublimest of the sciences. It is certain that he has gained a place among the greatest astronomers of any age or country and that the estimate now placed on his work will only increase with the flight of centuries. If England is justly proud of her Newton and Herschel, France of her Lagrange and Laplace, Germany of her Copernicus and Kepler, Italy of her Leonardo and Galileo, well may America honor her Pierce and Gould!

**We Should Have Thought Them.**  
 A doctor tells a good story in connection with a lad who, until recently was in his employ. It was part of his duties to answer the surgery bell and to usher the prospective patients into the consulting room. One morning there presented himself at the surgery entrance a mechanic with whom Buttons was on speaking terms.  
 "Hello, Jackson!" he remarked.  
 "What's the matter with ye?"  
 "Oh, I just want to see the doctor," replied the visitor.  
 "Have yer brought yer symptoms with yer?" inquired Buttons. "That's the first thing he'll ask yer about. If ye ain't brought 'em, ye'd better pop back, an get 'em. He won't be down for a quarter of an hour, an he's awful pertikler about 'em!"  
 "And would you believe it?" adds the doctor, "that fellow was actually about to act on the boy's advice when I entered the surgery!"—Pearson's Weekly.

The citizens of Berlin have a summary method of stopping the dangerous practice of carrying sticks and umbrellas horizontally. As soon as a man tucks his umbrella under his arm he will promptly feel a quick blow on it from behind. There is no use in his getting angry with the person who strikes the blow, because public opinion sanctions his conduct.

**Catarrhal Deafness.**  
 The latest stage development of Nasal Catarrh. Japanese Catarrh Cure goes away past the points where even specialists on the Slesias have been able to reach. It's a penetrating, soothing, healing and strengthening compound, allaying the inflammation and healing without leaving the slightest bad after-effects. The only guaranteed Catarrh cure. 50c at all druggists. 119

**OUR JAWS NEED EXERCISE**

**Lack of Mastication Causes Dyspepsia and Teeth Troubles.**

Mastication is rapidly becoming a lost art, and, although we have become hardened to the fact that three-fourths of the dyspepsia is due to this cause, it might surprise some of us to know that the early decay of the teeth and diseases of the gums are occasioned by this same lack of maxillary exercise.

A disease of the gums, called Rigg's disease, which is every day becoming more common, is caused almost entirely by the want of proper mastication. Twenty-five years ago this trouble was not considered of any importance by the dentist on account of its rare occurrence.

Today it is given more care than the decay of the teeth, as he is frequently consulted by patients who have a full set of natural teeth which are quite loose in the jaw. Aside from this they are sound and healthy, and after a certain development in the disease nothing can be done to help them.

By lack of exercise the blood which should nourish both the bones and the gums is not carried to the part, nor does the blood carry sufficient material to the teeth; hence the enamel formed is defective, and early decay results. Frequently, too, the mechanical development of the jaw is arrested by this same want of motion.

Most of the food among the better class of people today is cooked so as to require very little mastication, and the consequence is that the muscles have become flabby, the jaws slender and the processes for the attachment of the muscles almost obliterated.—Boston Globe.

**Big Men and Big Noses.**

Cyrano de Bergerac is remembered because of his large nose. Few know that he was a poet, and fewer still know his poetry. The nose is a conspicuous feature of history. The length of Cleopatra's is said to have figured in Roman politics, and a scandal grew out of it which ended in the ruin and death of Antony and the establishment of an empire which lasted a thousand years. Napoleon would not promote a man who had not a large nose. He himself was well favored in this respect. Caesar was "the best nosed Roman."

All American statesmen have been noted for this feature. Old men tell of our own Boston, who used to shake his nose like an elephant's proboscis when he got excited. It seems to be the law that all great men have great noses, but let no one think that the converse of this is true, that all men who have great noses are great men. Such a conclusion would lead to confusion and needless pain and disappointment.—St. Louis Post-Dispatch.

"As every sportsman knows," said an enthusiastic New Orleans hunter, "it is easy to see a rifle bullet in the air, and those fired from the new high power guns are very curious to look at. Stand a dozen yards at one side of the mark and let a friend blaze away at any range with a small caliber weapon using smokeless powder, and you'll see a strange, bluish white streak the instant the bullet strikes home. The streak is apparently a couple of inches wide and several feet long and is more like a flash of light than anything else I can think of.

"With the old fashioned Remington or Springfield carbine the bullet has the appearance of a long black rod, and I don't know why there should be such a difference in the optical illusion produced by the smaller caliber. I have heard some people deny that the bullet can be seen, but they are very much in error. It all depends on getting the right viewpoint. A few feet either way will render the missile invisible, but the right spot is soon found by experiment, and after that the thing is as plain as day."—New Orleans Times-Democrat.

Alfred A. Taylor, of Margaree says: One bottle of MINARD'S LINIMENT cured a swelling of the gambel joint, and saved a horse worth \$140 00.

Thos. W. Payne of Bathurst, saved the life of a valuable horse that the Vet. had given up, with a few bottles of MINARD'S LINIMENT.

**THE CAUSE OF CONSUMPTION.**

Too little blood is, as a rule, the first cause of consumption—Thin, bloodless, anaemic people lack power of resistance. They catch cold easily, get a cough and cannot throw it off. Then the lungs give way; they lose more blood, and give the fight for life up as hopeless.

**CONSUMPTION IS CURED**

by increasing the blood supply and making it richer, so that it may feed and fortify the weakened lungs, throw off the distressing cough and put an end to the debilitating night sweats.

**DR. WILLIAMS' PINK PILLS FOR PALE PEOPLE**

make new, rich blood with every dose. Consumption may go so far as to be incurable. Quacks who pretend to cure every case are unworthy of confidence; but many cases of consumption have been cured by Dr. Williams' Pink Pills, See that you get the genuine—substitutes never cured consumption or anything else.

The Genuine are Sold only in Packages like the Engraving.

WRAPPER PRINTED IN RED.

At all dealers, or direct from the Dr. Williams' Medicine Co., Brockville, Ont., at 50 cents a box or six boxes for \$2.50.

**Horsepower.**

Watt, the great improver of the steam engine, introduced into the vocabulary of machinists the term horsepower. When he first began the manufacture of steam engines, he experienced much difficulty in ascertaining from his distant customers what sized engine they required, and they were not less puzzled how to communicate to him the information. He was frequently guided, however, by their mentioning the number of horses which the engine ordered was designed to replace. Acting upon this hint, he ascertained by experiment that the very strongest of the London brewers' horses (animals of wonderful size and strength) could exert a force equivalent to raising 33,000 pounds one foot in a minute. This force he called one horsepower, and adopted it as the standard in regulating the size of steam engines. Now, not one horse in 100 is able to exert that degree of strength. A steam engine of ten horsepower can, in reality, do the work of about 20 horses.—New York Ledger.

**PRINCE EDWARD ISLAND.**

Information for Tourists and Others  
 Time Tables, etc.

Prince Edward Island has many attractions for tourists, and it is expected that this season the influx of visitors will be very large.

**HOW TO GET TO CHARLOTTETOWN**

The steamer Halifax leaves Boston for Charlottetown every Saturday at noon and will be due at Charlottetown on Monday night. On the following Tuesday at one o'clock will leave on return to Boston. Halifax and Port Hawkesbury are called at every trip. Passengers may take the steamer at any of the ports mentioned. The Halifax will be supplemented by the Grand Duchess later in the season.

The steamer City of Ghent plys between Halifax and Charlottetown each week, calling at several ports en route. She is due here every Thursday.

The steamers Coban, Bonavists, Campana, Tiber and Polino, of Montreal, also make Charlottetown a port of call.

Passengers for this Province coming by way of Picton are brought to Charlottetown by the steamer Princess. Those coming by way of Point Du Chene connect with the steamer Northumberland, and may come through to Charlottetown by the mail special which leaves Summerside each evening immediately after the steamer reaches that port.
