Mr. and Mrs. John MacDonald,

Movement of potatoes from Prince Edward Island during the month of February 1958 was 1,337 cars. This includes all truck movement as well as the rail movement across the ferry, making a total to date for this year's movement of 9,168 carlots against last year's movement to the same time of 8,080 carlots.

Movement during the month of February continued well above the expected and the demand has increased as the export demand came in for our potatoes from Florida, Michigan and the West Indies.

During the last three weeks there has been a heavy movement of New Brunswick potatoes by truck and by rail to American points which has relieved the pressure on the Ontario and Quebec markets.

The movement from Maine has been active and shows a very wide distribution with a demand for Maine potatoes to Chicago. This movement is about the same as it was two years ago when Maine found a good market for all their potatoes.

REEFER CAR SHORTAGE

At the present time there is a definite shortage of refrigerator cars in Prince Edward Island. Struonous efforts are being made to bring a supply in to move required volume in the next two weeks.

The reports coming from the South indicate that Florida potatoes in volume will be from thirty to forty days late coming on the market, that Alabama potatoes will be twenty days late, and that California, with its very high acreage of potatoes has the prospect of an excellent crop and will be moving slightly earlier than other years.

What will happen to the potato market if these three states happen to market together, is very difficult to forecast because it must be remembered that these potatoes have to move to market as soon as they are ready as the
