KNOWLEDGE

Brings comfort and improvement, and tends to personal enjoyment when rightly used. The many, who live better than others and enjoy life more, with less expenditure, by more promptly adopting the world's best products to the needs of physical being, will attest the value to health of the pure liquid laxative principles embraced in the ready, Syrup of Figs.

Its excellence is due to its presenting in the form most acceptable and pleasant to the taste, the refreshing and truly beneficial properties of a perfect laxative, effectually cleansing the system, dispelling colds, headaches and fevers, and permanently curing constipation.

It has given satisfaction to millions and met with the approval of the medical profession, because it acts on the Kidneys, Liver and Bowels without weakening them and it is perfectly free from every objectionable substance.

Syrup of Figs is for sale by all druggists in this "Rocky Mountain" region, and is manufactured by the California Fig Syrup Co., only, whose name is printed on every package, also the name, Syrup of Figs, and being well informed, you will not accept any substitute if offered.

W. R. Watson, Druggist, Charlottetown, P. E. Island.

THEY DON'T AGREE. POND'S EXTRACT. Instant Relief from Sting of Mosquito Bites from Heat of SUNBURN.

W. W. CLARKE, Ticket Agent, Corner Queen and Water Streets. Charlottetown, June 22, 1894.

HOW WE WALK.

The Muscles Used and the Mechanical Work They Do. The chief muscle concerned in walking are those in the feet and ankles, which by pulling up the heel, assist in pulling the body forward.

There is another point in walking. The body is constantly supported and balanced on each leg alternately, and, therefore, on only one at a time. Hence there must be some means for throwing the centre of gravity over the line of support formed by the foot of the leg.

It is literally true that a person may see and yet not perceive. It has happened, in certain injuries of the brain, that a person sees and reads the words in a book and yet does not perceive their significance.

When this centre is destroyed we see objects and may avoid obstacles in walking, but persons, words, etc., are not recognized. This centre exists only on the left side of the brain.

An impression, however short, made upon the retina is perceived. The letters on a printed page are distinctly seen and yet not perceived.

When the centre is destroyed we see objects and may avoid obstacles in walking, but persons, words, etc., are not recognized.

THE HUMAN EYE.

IT POSSESSES ALL THE QUALITIES OF A PERFECT INSTRUMENT.

A Single Impression Although There Are Two Images—Seeing Without Perceiving—An Old Experience—The Extreme Quickness of Sight.

I have often wondered whether the statement, occasionally made by physicists, that the human eye is not a perfect optical instrument, is an expression of human vanity or of an expert knowledge of the anatomy of the eye and the physiology of vision; and I have come to the conclusion that the latter is the more reasonable theory.

The approach to perfection in modern telescopes and microscopes is wonderful indeed, but as physiologists have advanced the knowledge of vision, the so-called imperfections of the eye have been steadily disappearing, and even now there is not much to learn.

Viewed merely as an optical instrument, an apparatus contained in a globe less than an inch in diameter, which is produced an image practically perfect in form and color, which can be accurately adjusted almost instantly for every distance from five inches to infinity, is formidable in every direction, has an area for the detection of the most minute details and at the same time a sufficient appreciation of large objects, is double, but the images in either eye exactly coinciding, enable us to see all shades of color, estimate distance, solidity, and to some extent the consistence of objects, the normal human eye may well be called perfect.

The more, indeed, the eye is studied in detail the more thoroughly does one appreciate its perfection as an optical apparatus.

We receive the impression of a single object, although there are two images—one in either eye; but it is necessary that the images be made upon corresponding points in the two retinae. If the angle of vision in one eye be deviated even to a slight degree by pressing on one globe with the finger, we see two images. One can appreciate how exactly these points must correspond when it is remembered that two rays of light appear as one only when the distance between them is one thirty-five hundredth of an inch. Not the least of the wonders of the eye are connected with the appreciation of images made upon the retina by certain parts of the brain.

It is literally true that a person may see and yet not perceive. It has happened, in certain injuries of the brain, that a person sees and reads the words in a book and yet does not perceive their significance.

After the Grip

No Strength, No Ambition

Hood's Sarsaparilla Cures

After the Grip. The following letter is from a well-known merchant tailor of St. George, N. B.: "C. I. Hood & Co., Lowell, Mass. 'Gentlemen—I am glad to say that Hood's Sarsaparilla and Hood's Pills have done me a great deal of good. I had a severe attack of the grip in the winter, and after getting over the fever I did not seem to gather strength, and had no ambition. Hood's Sarsaparilla proved to be just what I needed. The results were very satisfactory, and I recommend this medicine to all who are afflicted with rheumatism or other ailments caused by poison and poor blood. I always keep Hood's Sarsaparilla in my house and use it when I need a tonic. We also keep Hood's Pills on hand and think highly of them. J. W. DYKEMAN, St. George, New Brunswick."

Hood's Pills are purely vegetable, and do not purge, pull or gripe. Sold by all druggists.

ADAMS' TUTTI FRUTTI
