

Churches Tomorrow

Church Of England

PETER'S CATHEDRAL
Anglican
Rochford Square
The Reverend Canon G. E. Moffat
M.A., B.D.
Rector.
The Reverend W. G. Hogg
Honorary Assistant Priest.
Organist and Choir Director
Miss Suzanne Brenton, Lic. Music

QUINQUAGESIMA SUNDAY
7:30 a.m. Matins
8:00 a.m. Holy Eucharist
9:00 a.m. Church School (6-15)
11:00 a.m. Choral Eucharist
11:45 a.m. Church School (under 6)

7:00 p.m. Evensong
8:00 p.m. Adult Confirmation Class
Daily services at usual hours

S. PAUL'S ANGLICAN CHURCH

The Parish Church
Established 1769 by Royal
Foundation
The Reverend Canon J. T. Ibbott,
Rector.
Organist and Choir Director:
Mr. H. John Harris, F.R.C.O.

8:30 Holy Communion,
10:00 Junior and Senior Grades
Sunday School
11:00 Beginners and Primary
Grades Sunday School.

11:00 Morning Prayer and Sermon.
Subject: "The Greatest of These"
Anthem: "The Story of the Church's Song—VI. The Monasteries and Some Immortal Hymns We Owe to Them."
5:00 Evensong.
Subject: "Growing Up."
Anthem:

UNITED PENTECOSTAL CHURCH

57 Elm Avenue
Rev. Quincy Eicher, Minister
Phone 8677
SERVICES

10 a.m. Sunday School and Bible Class.
11 a.m. Praise and Worship.
7 p.m. Evangelistic Meeting.
You are very welcome to our meetings.
Subject: "The Church That is Different."

PENTECOSTAL ASSEMBLIES OF CANADA

FULL GOSPEL SERVICES
In Orange Hall (L. O. L.)
148 Richmond Street
S. J. Myers, Minister.
10 a.m.—Sunday School
11 a.m.—Worship Service
7 p.m.—Evangelistic Service.
A hearty welcome awaits you.

THE SALVATION ARMY

Great George Street
"HOME OF EVANGELISM"
Since 1865
Sr. Major and Mrs. W. Stanley
Corps Officers.

Saturday
7:30 p.m.—Open Air Service.
8:00 p.m.—Prayer and Praise Service.

Sunday
10:30 a.m. Prayer Meeting
11:00 a.m. Holiness Service.
2:00 p.m.—Young Peoples Directory.

2:30 p.m. Sunday School and Bible Class.
6:00 p.m. Young Peoples Service.
6:30 p.m.—Open Air Service.
1:00 p.m.—Evangelistic Service.
All services will be conducted by Sr. Major and Mrs. W. R. Stanley. Come and bring your friends.

BIBLE CHAPEL

235 Cumberland St. at Longworth Avenue
"Preaching Peace by Jesus Christ."
Sunday Services, February 12th,
10:00 a.m. Family Bible Hour.
Sunday School classes for all ages.

The public cordially invited to All Services

FREE CHURCH OF SCOTLAND

Birchwood Street
Minister: Rev. J. H. Bishop, B.A.
10:00 a.m.—Sabbath School.
11:00 a.m.—Worship.
Sermon: "Do Not Forget. Remember."
7:00 p.m.—Worship.
Sermon: "The Man Healed."

GOSPEL HALL

Upper Prince Street
ORDER OF MEETINGS
FOR LORD'S DAY
Sunday School 10 a.m.
Breaking of Bread 11 a.m.
Special Gospel Services continuing
Lord's Day at 7:30 p.m.
R. J. McIlwaine, speaker.
Telling of Man's Ruin by The Fall and God's Remedy through the Death of Christ.
Neither is there Salvation in any other. . . . we must be saved Acts 4:12.
Visitors are very welcome.

FRANKFURT STATE CASE ENDS

FRANKFURT, Ky. (AP)—The state court of appeals ruled Friday Roman Catholic sisters can teach in Kentucky public schools so long as they do not inject religious views into their classwork. The ruling on Kentucky's controversial decision today, the effect of the ruling upholding legality of 84 Catholic sisters teaching, while wearing denominational habits, in public schools of six counties.

SCIENTIST RESIGNS

CHICAGO (AP)—Walter H. Zinn, noted scientist and director of the Argonne national atomic laboratory since it was established in 1946, has resigned, effective June 30, a spokesman for the laboratory said today. The Washington Post and Times Herald says he resigned following a policy disagreement, and had made his intentions emphatic with a telegram sent to the Atomic Energy Commission.

THE BIBLE HOUSE

Our Saviour's last command to His followers: "Go ye into all the world and preach the Gospel to every creature."
—Mark 16:15.
We cannot all do this, but we can do so indirectly. The work of the Bible Society is to print and distribute the Gospel, as far as possible, to the whole world. It cannot do this without help.
Here then is our opportunity to indirectly obey our Saviour's last command. Our contributions to the work of the Society make its work possible.
Let us then co-operate with the British and Foreign Bible Society and thus together obey his command.
THE BIBLE HOUSE, 172 1/2 King Street, will accept contributions and have on hand religious literature, Bibles, Hymn Books, etc., suitable for gifts.

GIGGEY'S PHARMACY

OPEN
THIS WEEK END
SATURDAY AFTERNOON
AND
ALL DAY SUNDAY

W.C.T.U. NOTES

Modern alcohol education does not emphasize as it should the extreme danger of the first drink. In general, it deals too much with alcoholism as being the only result of drinking, when truly, as Dr. Haven Emerson says, "deaths from alcoholism are the least of the harm alcohol causes. It is the constant and severe interference with human relations which is responsible for the major danger of alcohol to society today."
Parents and teachers are obligated to teach children and youth in such a way that they will have full knowledge of the danger of the first drink, and make a definite decision never to take it. The lack of such teaching is the missing link in effective alcohol education.
The youth must know "why" in order to have the courage to refuse a drink when someone offers it, saying, "One drink won't hurt you."
The "why" may be summed up as follows:
The effect of the first drink on the central nervous system is the

beginning of a habit which may lead to alcoholism. The drinker begins his "alcohol slavery," which Abraham Lincoln describes as being "worse than the chattel slavery which we fought."
The first drink is the beginning of an altered personality, for alcohol depreciates character.
There are two delusions which probably motivate nine out of ten persons to continue drinking:
One is the false assurance—held even by some nondrinkers—that a drinker can control his drinking and abstain at will. Many AA's still believe that they controlled their drinking when they started, but cannot tell when or how they became alcoholics.
The other is a false feeling of well-being, or flight from reality, with an assurance that the drinker will indefinitely experience intoxication without lasting harm to himself or others.

From the reports of the several committees of the Federal-Provincial Agricultural Council, the ninth annual conference of which was held at Birch Court, Experimental Farm, February 6-8, some items of particular interest to the farmers of the Province are herein presented.

The year 1955 was more profitable for egg producers who cared for their flock and therefore realized a higher percentage of A quality than was the year 1954. The average price of A large for 1954 was 35 cents per dozen, but an increase of 6 cents per dozen was shown in 1955. The egg situation in this Province, from a quality standpoint, was only fair during 1955. This could be attributed chiefly to the extremely warm weather conditions, and the range feeding of laying flocks. The demand for A quality eggs through 1955 was good and little difficulty was experienced in finding a ready market for this type of product. Lower grades such as Grade B and Grade C eggs, during peak production, was a product that was difficult to market. The only outlet for the bulk of this type of product was to the dryers. It necessitated the moving of the product to Quebec.

The number of cases of eggs marketed through registered egg grading stations in P.E.I. for 1954 was 114,100 compared to 120,864 in 1955. This showed an increase of 6,764 cases. There were approximately 8 check inspections made at each station during 1955 with 56 detentions being applied. The detentions were made on eggs found below grade marked.

POULTRY MARKETINGS
During 1955 1,038,626 pounds of poultry were marketed through registered poultry processing stations. The average price paid for chicken Grade A - 5 pounds and over, was 36 cents per pound. This represents a 2 cent increase per pound over 1954. For fowl of the same grade and weight, 25 cents per pound. No change from the previous year.

Poultry marketings as reported by registered stations, were 32,299 pounds over the previous year. It was reported from Toronto, Ontario, that Prince Edward Island roasting chickens, due to their superior quality, were receiving ready consumer acceptance.
The movement of turkeys alive and dressed for export, showed a marked upward trend over the previous year. Approximately two thirds of the local production is shipped out of the province.

The Agriculture, Horticulture, Plant Pests and Disease Committee notes that spray calendars for fruits, small fruits and vegetables have been published. A folder entitled "Protection Guide for Tree Fruits in Home Gardens" and a booklet called "Protection Guide for Small Fruits and Vegetables" were published by the Provincial Department of Agriculture in April, 1955. Approximately 1,000 folders and 1,500 booklets have been distributed since that time. These are available on request.

VIRUS-FREE PLANTS
Virus-free strawberry plants have proven exceptionally productive, and the committee emphasizes the importance of planting being set out. Virus-free plants are available from a few growers in Prince Edward Island, or they may be secured outside the province.
The Marketing Committee noted that refrigerator locker space, freezing facilities, and cold storage facilities are being used to their utmost capacity, and that the public demand for such cold storage services is increasing annually.

The Constellation's double stretch hose and swivel top make cleaning easier because they let you clean farther—as much as a 30 foot circle—without shifting the cleaner around. New, more powerful motor produces more suction. Extra-large disposable dust bag changes in seconds!

Light, easy to use. You simply guide as smoothly whirling brushes polish floors to gleaming finish. It cleans—it waxes—it polishes! Feature for feature, the Hoover Polisher is the value buy!

The Week at S. D. U.

An era of unrest has finally been ceremoniously brought to a satisfactory conclusion with the adoption of the standard crest for the college as the standard crest for the Students' Union held in the Assembly Hall, all the proposed designs were on display as the issue took its dying breath. All the guady, shallow, and trite designs fell before the emblem that has been with us, in spirit if not in actuality, for the last fifty or so years. The coat of arms that the door of the Science Building will now be worn by the students here at the college, and in precise like the same colors.

To further distinguish the Saint, block letters spelling Saint Dunstan's will be arranged in semi-circular fashion on the reverse side of the particular student inserted between the hoons of the inscription. The year of graduation will be affixed to one of the sleeves. Even

The Prince Edward Island government has encouraged this by assisting in the payment of the freight. Last year they paid \$2.50 per ton on the freight on ground limestone distributed to the farmers of the Island so that it cost the farmers at from \$3.30 to \$5.60 per ton according to the quality and destination. A total of 25,174 tons were imported during 1955.

The mud was either piled on the shore or near a highway where it could be hauled away later or piled in small heaps on the fields and exposed to frost, which broke down many of the shells before being spread on the land. We recall buying good shell mud at the diggers at four to six cents per scoopful of from 400 to 500 pounds.

The railway ran a spur line to a pier on St. Peter's Bay near large shell deposits. The price charged for a 12 1/2 ton car (enough for an acre) of mud was \$3.50 for many years. In 1920 this had been raised to \$14.00 F.O.B. point of shipping. The value of lime for Island soils being established as a valuable soil amendment, ground limestone from the mainland has been imported in increasing quantities.

GROUND LIMESTONE
The second type was a much larger machine, used largely for deeper deposits. It had quite a huge frame, about ten feet high, made of heavy timber with huge knees to support the uprights. The shells extended all around the mud-hole in the ice, with a platform at the rear which would be over the open water when the machine was moved forward to new material. The fork or scoop handle was much heavier and had an iron plate on the back of the upper end, with heavy iron pins projecting about every five inches; this reached almost to a four foot long piece which enabled the operators to guide the movements of

the fork.

LARGE MUD FORK
When this heavy equipment was hauled back by hand after dumping its mud in a sledge, the iron rods that were hooked on a heavy iron rod that was fastened across the end of a frame made of timber and held in place by loose bolts that attached it on either side to the sills, about fifteen feet from the back end of the mud-hole. The mud fork was balanced on this rod and swung into an upright position and dropped straight down into the shell mud. Then this frame was lifted up a couple of feet and hooked onto the pins on the back of the handle and the operators then stood on it as the fork was filled by the capstan pulling it forward by a chain which passed through a block on a swinging crane, that was attached to the top and bottom at the middle of the main frame of the digger. The capstan operated by a horse. The frame and round was fastened to the ice ahead of the main frame with its top bearing braced to either side of the top of the digger frame.

VALUE OF SHELL-MUD
The first application of shell mud to land not previously mud-digged was very beneficial. It invariably produced luxuriant crops of clover, (we remember fields that did not need to be raked, as large clover were not more than twenty feet apart), followed by increased crops of roots and grain. These muds were essentially lime, most of them contained eighty-five per cent and over of carbonate of lime with traces of nitrogen and phosphoric acid. They were good soil amendments. The farms near very heavy deposits received some of these deposits received very heavy dressings in the early days, but second applications provided of little value. The growing of certified seed potatoes was partly responsible for the decline in the use of oyster shell mud, which tended to increase potato scab.

The mud was either piled on the shore or near a highway where it could be hauled away later or piled in small heaps on the fields and exposed to frost, which broke down many of the shells before being spread on the land. GROUND LIMESTONE
The second type was a much larger machine, used largely for deeper deposits. It had quite a huge frame, about ten feet high, made of heavy timber with huge knees to support the uprights. The shells extended all around the mud-hole in the ice, with a platform at the rear which would be over the open water when the machine was moved forward to new material. The fork or scoop handle was much heavier and had an iron plate on the back of the upper end, with heavy iron pins projecting about every five inches; this reached almost to a four foot long piece which enabled the operators to guide the movements of

the fork.

Churches Tomorrow

Church Of England

PETER'S CATHEDRAL
Anglican
Rochford Square
