WANTED TO BUY—SECOND HAND Furnace. Phone 2624-L.

WANTED—HOUSEKEEPER, one adult, modern conveniences, comfortable home. Box 7, Guardian, Summerside.

### Perfume From Corn Smut

The Canadian corn crop may someday become highly important to the perfume industry.

On the basis of experiments at the federal government's Prairie Regional Laboratory at Saskatoon, Sask., a new antibiotic made from diseased ears of corn offers hope for a source of musks used as fixatives in the manufacture of perfumes.

The antibiotic, known as ustilic acid, is produced from the black dust caused by a smut which attacks corn plants.

Musk is essential in perfume manufacture to prevent the evaporation of the highly volatile oils which provide the sweet smell to perfumes. It was originally obtained from the glands of the male musk deer of Tibet at a very high cost. In recent years, however, chemists have devised a way of making synthetic musk called "Astron" which is now doing the job as a perfume fixative much more economically than musk from the Tibetan deer.
